NARRATIVE
OF A
JOURNEY ROUND THE WORLD,
DURING THE YEARS 1841 AND 1842.

BY
SIR GEORGE SIMPSON,
GOVERNOR-IN-CHIEF
OF THE HUDSON'S BAY COMPANY'S TERRITORIES
IN NORTH AMERICA.

IN TWO VOLUMES.

VOL. II.

LONDON:
HENRY COLBURN, PUBLISHER,
GREAT MARLBOROUGH STREET.

1847.

Survey*

CONTENTS
OF
THE SECOND VOLUME.

CHAPTER XI.

SANDWICH ISLANDS.

Origin of Hawaiian nation—Amount of population—Language—
Food—Houses—Dress—Appearance and disposition—Customs and
amusements 1

CHAPTER XII.

SANDWICH ISLANDS.

Navy—Army—Revenue—Government—Religion—Education—
Productions and Manufactures—Trade 70

CHAPTER XIII.

SANDWICH ISLANDS, &c.

Troubles with sailors—Visit to Nuannau—Kamehameha's great vic-
tory—Wells in Honolulu—Subterranean brook—Idolatrous temple—
Cannibalism—Suicide of a Chinese—Chinese and Japanese—Power of
false religion to resist truth—Chinese residents—Death of heir appa-
rent—Governor Kekuauaoa's activity—Sitting on hams a mark of
respect—Royal mausoleum—Distribution of Kamehameha's bones—
Causes of scarcity of children of chiefs—Bickerings of all sorts among
foreign residents—More trouble with sailors—Voyage to Mowee—
Arrival at Lahaina—Rekeke's hotel—Mr. Baldwin's chapel—Rev. Mr.
Richards—King, Haalilio, and John Young—Royal mausoleum—
Kekauluohi, the premier—Excellent quarters, with maids of honour as
bed-makers—Visit from Messrs. Richards and Baldwin—Queen Kaluma
—Visit to the premier along with Mr. Richards—Jack of clubs—Native
dance—Swimming of natives, and aversion of foreign residents to
bathing—Lahaina, its population and situation—High school—Ar-
rangements for sending a deputation to England, France, and the United
States—Haalilio's character and death—King and suite dining on board

—Kaluma again, the silent eloquence of her female attendants—Policy of government in managing the aristocracy—Paying farewell visits—Accompanied on board by King and suite—Voyage to Sitka, change of temperature—Mount Edgecumbe—Retrospect of journey, the English race having been dominant every where—Common origin and common destiny of English and Russians 143

CHAPTER XIV.

SITKA.

Landing—Difference of day of week—Bishop of Sitka—Departure for Taco and Stikine—Tragical end of Mr. John McLoughlin—Critical position of establishment and consequent proceedings—Abundance of pine and cypress—Voyage back to Sitka—Arrival on Easter Sunday—Peculiar customs of this festival—Divine service—Officers of Russian American Company—Mechanics and labourers—Married women—Hospital—Bishop's farewell sermon—Strictness of clergy in general and also of laity—Ecclesiastical zeal of Russian Government, united with spirit of toleration—Medicinal springs, favourable influence on vegetation as well as health—Perseverance of natives in bathing—Water impregnated with sulphur—Capital mistake of a recent visitor—Redoubt—Miserable weather at Sitka—List of shipping—Sailing of Constantine with M. Rotscheff and family—Sailing of Ochotsk—Tchuktchi of Siberia—Fair of Ostrovnoye—Tchuktchi chief's notion of perfect happiness—Behring's Straits—Climate, British Isles and Kamschatka—Indian fight—Immediate stop to the issue of liquor among Indians—The evil in question the inevitable result of competition—Political relation between Indians and Russians—Yassack, its origin and progress—Kalusian funeral—Wedding at Sitka—Bridesmen and bridesmaids—Embarkation on board the Alexander and departure from New Archangel 179

CHAPTER XV.

VOYAGE TO OCHOTSK.

Lightness and variableness of winds—Ship's discipline, &c.—Drunken priest—The Parachute, of New Bedford—Whales rapidly diminishing in number—Unknown island—Hunting of sea-otters—Danger of sinking in the small baidarka, and affecting mode of meeting death—Russian surveys of the northern shores of Asia, anticipated by England at either extremity of line—Voyages of Cook and Billings—Aleutian Archipelago probably the original channel of communication between the two continents—Behring's Straits perhaps a passage from America to Asia rather than from Asia to America—Aleutian Islands, their ethnographic characteristics—Probable course of emigrants from Aleutian Islands on landing in America—Increasing difficulty of tracing the migrations of tribes

—Productions of Aleutian Islands—Russians first to plant civilization on north-west coast, statements of Shelekoff—Signs of land—Kamschatka, its corrupt government—Popular delusion with respect to despotism—Passage between Kurile Islands into Sea of Ochotsk—Dense fogs, contrivances to neutralize them—Sleeping whale—Story of Mr. Erasmus and the fogs—Kuriles apparently continuation of Kamschatka—Immediate influence of Russia from Sweden to Japan—Sea of Ochotsk—River Amoor, its physical value neutralized by politics—Collision of Russia and China on the Amoor—Sight of land, and preparations for going ashore—Impenetrable barrier of ice—Hair seals—Sleeping whale—Keel-hauled whale—Arrival at Ochotsk—Optical illusion—Record of disasters in these seas 215

CHAPTER XVI.

FROM OCHOTSK TO YAKUTSK.

Ochotsk—Madame Zavoika's horticulture—Food, health, &c., of inhabitants—Ship-building establishment—Courts and lawyers—Salt—Governor Golovin—Russians, and Ostrogs, and Cossacks—Shipwrecked Japanese—Disciple of Origen—Brick tea—Mr. Atlasoff's snow-shoes—Promiscuous bathing—Bargaining for horses with Jacob—Departure from Ochotsk—Forests of pine, &c., with swamp-tea—Jacob's policy—Mr. Shiloff's caravan—Fidelity and skill of Yakuti—Cossack's zeal and boastfulness—Spirit of the forest—Jacob's care of horses—Notes of cuckoo—Fourteen fords on horseback—Lord Byron and Captain Cochran—Industry of Yakuti, as also hospitality—Dropping in of three friends to dinner—Cossack's discipline—Caravan—Mode of feeding horses in the night—Real hell of horses—Inundations—Threatened attack on the part of a bear—Country more fertile—Mail from Yakutsk, disappointment—Plant that intoxicates and disables horses—Mistake of Cossack—Inundations—Herds of cattle and caravans—Summer by day and winter by night—Superstition of Yakuti—Height of land, with a lake feeding both seas—Perpetual snow and ice—Caravans without end—Udoma crossing—Hardly any horses of a dark colour—Danger in pastimes from runaway convicts—New ice in middle of July—Valley of the Nalivnoi—Difficulty in ascertaining names—Wet St. Nicholas Day—Yakut's mode of estimating distances—Allack Youmi—Mosquitoes—Moor fowl—Delays of travelling—Rein-deer—Ooloonach ferry—Scenery now softer—Swamps bridged with corduroy—The Aldan—Horses of Yakuti well trained—Kumyss—The Amga—The Capercailzie, snipe, and plover—Orelach—Traveller's book—Tshooropsa—Porotoffskaya—Visit from son of a Yakut chief—Tshetshiguiskaya—Temooloya—Locusts—Toolgyachtach—Lena and other rivers once much higher—Arrival at Lena—Arrival at Yakutsk 248

CHAPTER XVII.

YAKUTSK, AND VOYAGE UP THE LENA.

Revenue and Population—Temperature—Agriculture—Site of Town—Fur trade and Ivory trade—Governor Roodikoff—Mr. Shagin—Native working in metals—Gluttony of Yakuti—Social factions—Hospital—Buildings—Curiosities—Departure from Yakutsk—Bestach—Passenger boats—Stolby—St. Elias—Condition of Peasants—Marchinskaya—Mr. Atlasoff—Reindeer—Stranded in a squall—Solianskaya—Olekminsk—Mr. Atlasoff's hospitality—Siberian conquests of Cossacks—Horticulture—Sables of the Olekma—Berdinskaya—Chase and capture of Yakuti—Cossack's discipline—Wild fruits—Condition of Peasants—Hurrah Rocks—Heavy bateau—Water-sails—Kamenskaya—Condition of Peasants—Yerbinsky—Pooloodoffskaya—Treatment of Criminals—Vittimsk, Sables and Tale—Tungusi—Aborigines in general—Boat upset—Character of Women—Doobroffskaya—Echo—Cheeks of the Lena—Echo—Wild fruits—Routine of existence—Our Saviour's Name-Day—Grand ball—Return of English letters from Ochotsk—Condition of Peasants—Goitres—Alexeyeffskaya—Cossack's irresponsible cruelty—Kirensk, sleepy-headed officials—Adventure ashore—Soberskaya—Nettle kale—Oolkanskaya—Beasts of prey—Character of Peasants—Inundations—Condition of Peasants—Snuff—Kosarki—Oostooskaya—Progress of Cossack Conquerors—Oostuginskaya—Figoloffskaya . 297

CHAPTER XVIII.

FROM FIGOLOFFSKAYA TO IRKUTSK.

Tyoomenzora—Vercholensk—Katschooga—Bratsky Steppe—Burat Settlements—Village of exiles—Koodinskaya—Irkutsk—Governor Patneffsky—Governor-General Rupert—Archbishop of Eastern Siberia—Chinese jealousy—Lake Baikal compared with Lake Superior—Mines of Nertshinsk—Trade of Kiachta—Steam on Lake Baikal—Mission of Selenginsh—Mines and washeries—Irkutsk, its hospitalities—Departure from Irkutsk 354

CHAPTER XIX.

FROM IRKUTSK TO TOBOLSK.

Accidents—Mode of foraging—Convicts—Nishney Udinsk—Discomforts of travelling—Alzamoos—Peasant's house—Colonization of Siberia—The Burassa—Kansk—An exile's establishment—Krasnoyarsk, delays—Mines and washeries—Chief of the Burats—Ostrogs for convicts—Kosulskaya, quarrelsome postmaster—Atchinsk—The Tchulim—Dilapidated tombs—Inquisitive hostess—The Kia—Kyskal—Tomsk—Crawley an albino—False information—The Tom—Tartars—Bara-

binsky Steppe—Gipsies—Ubinskoi—Kainsk—Condition of peasants— Omsk—the Irtysh—Tobolsk	390
---	-----

CHAPTER XX.

FROM TOBOLSK TO LONDON.

Retrospect of Russian History—Yermac, his victories and death— Establishment of Russian power in Siberia—Tobolsk—Exiles—Tiumen, Mayor's dinner—Province of Perm—Kamishloff, doctors differ—Fair of Irbit—Condition of peasants—Ekaterineburg, mines—Value of Siberia to Russia, fur-trade, Chinese trade, ivory-trade, mines and washeries, geographical position, moral and political amelioration—Height of land —Kama—Countess Strogonoff—Churlish and obsequious postmaster— Kungur—Russians not Asiatics—Perm—Inland navigation—Countess Strogonoff—Courtesy and honesty—Province of Viatka—Armed foot- pads—Mookikikea—Merchants from Fair of Nishney Novgorod— Borlacki—Kasan, past and present—Volga—Forests of oak—Disturb- ances among peasants—Delays at posthouses, and artifices of postmasters —Nishney Novgorod—Troubles of a pair of dancers—Sheremetieff's estates and peasants—Vladimir—Uses of a pipe-stem—Symptoms of vicinity of metropolis—Moscow—Vishney Volotchok—Valdai— Novgorod the Great—Military settlers—St. Petersburg—Voyage to London	419
--	-----

NARRATIVE

OF AN

OVERLAND

JOURNEY ROUND THE WORLD.

CHAPTER XI.

SANDWICH ISLANDS.

Origin of Hawaiian nation—Amount of population—Language—Food—Houses—Dress—Appearance and disposition—Customs and amusements.

As our visit took place in the dull season, for the whalers had not begun to arrive on their way from the winter fishing of the south to the summer fishing of the north, so small a town as Honolulu could hardly yield a sufficient number of incidents to vary the daily entries of a month's residence; I therefore abandoned, during my stay, the form of a journal, merely recording, from time to time, my impressions of what I saw and heard. These impressions I propose to arrange in this and the next chapter; and for this purpose I shall separate, though without aiming at extreme accuracy of classification, all that relates to the people in their indi-

vidual capacities, from all that distinguishes them, if I may so speak, as a body politic.

I shall, in the first place, consider the interesting though purely speculative question, as to the original source of the native population.

ORIGIN OF THE HAWAIIAN NATION.

All the Polynesians, as I have already stated, have clearly had one and the same parentage. Though their general resemblances in manners and customs, in religion and government, in appearance and dress, might be made to fill volumes, yet they would, one and all of them, be less conclusive on the point, than the fundamental correspondence both in the words and in the structure of their languages. With but little difficulty, and in some of the instances with none at all, Tahitians, Marquesans, Samoans, Tangans, New Zealanders, and Hawaiians, to say nothing of the less known groups, can render themselves intelligible to each other; and of this similarity of dialects, the strongest, as well as the most gratifying proof is to be found in the fact that native converts of one archipelago have sometimes gone forth, as missionaries, to communicate the glad tidings of salvation to another. Thus a chief, who accompanied Mr. Ellis from Tahiti to the Sandwich Islands, often addressed the natives with effect; and Sir Edward Belcher found a little colony of Samoan teachers labouring, or rather wishing to labour, among the savages of the New Hebrides. To offer more specific evidence of the fundamental correspondence in question, the subjoined table is quite decisive, at least with respect to words; for the identical meanings of six nearly identical

sounds, in three different dialects, cannot possibly be accidental :—

<i>Tahitian.</i>	<i>Hawaiian.</i>	<i>Marquesan.</i>	<i>English.</i>
Ovai.	Owai.	Ovai.	Who.
Evau.	Ewalu.	Evau.	Eight.
Eiva.	Euva.	Eiva.	Nine.
Vahine.	Wahine.	Vahine.	Woman.
Maitai.	Maitai.	Maitai.	Good.
Tatou.	Tatou.	Tatou.	Tattoo.

Perhaps a careful examination of different dialects might suggest some hints as to their comparative antiquity. As the general tendency of language to become softer by change would derive special force from the feeble and almost childish organs of the race under consideration, any dialect might reasonably be deemed more recent, in proportion as its alphabet and pronunciation might be more meagre and effeminate. Now, the common language of the Polynesian Isles appears to have travelled from the west towards the east. Thus the Hawaiians, and apparently the Tahitians also, abhor a concourse of consonants, while the New Hebrides have their Erromanga, the Feejees their Banga, and the Friendly Islands their Tonga ; or, to use the better known name, their Tongataboo. If an Hawaiian were desired to pronounce any one of these three words, he would either insert a vowel between the two consonants, or omit the harsher consonant ; and he would, most probably, adopt the latter course, just as he would transform *England* into *Enclani*. In all probability, *Tonga* and *Tona*, or *Kona*, the name of a district, already mentioned, of Hawaii, are one and the same word ; and, to give an instance of which there can be no doubt : *tangata*, the Samoan for *man*, has been

softened into the Hawaiian *tanata*, or *kanaka*. Again, the very name of Samoa, the chief of the Navigator Isles, involves the letter *s*, which the Hawaiians, as also, I believe, the Tahitians, altogether reject, as being too much for their powers of utterance. Thus they change *fashions* into *patena* or *pakena*, *missionary* into *mitinary*, or *mikinary*, and *consul* into *tonatele*, or *konakele*. Finally, the Marquesan and Tahitian dialects, though they partake, in an eminent degree, of the softness of the Hawaiian, have yet retained, at least, one consonant, namely *f*, which it has discarded. Thus *Fatuiva*, one of the Marquesan Isles, and *Paofai*, a chief of Tahiti, would, in the mouth of an Hawaiian, respectively become *Patuiwa* and *Paopai*; while there can be no mistake as to the original orthography, inasmuch as the *f* is distinguished, in the one word, from *v*, and in the other from *p*. Might not a similar application be made of the table which preceded this paragraph, with respect to these three dialects? In the first four of its six words, the *v* of the Tahitians and Marquesans becomes the *w* of the Hawaiians—the former being, of course, a consonant; but the latter, however it may be classed by grammarians, being really *oo*, sounded as quickly as possible. If there be any truth in these desultory and incomplete suggestions, then must this archipelago have been peopled after the Marquesas and the Society Islands, and they again after the more westerly groups.

This result, which, so far as the Sandwich Islands are concerned, agrees with the traditionary lore of the archipelago, is consistent with nearly all the arguments which can be brought to bear on the subject. Looking, on the map, at the tolerably continuous chain of islands

and groups of islands, from Sumatra to the Marquesas, and at the comparatively open ocean between this its last link and the American continent, a plain man would instinctively infer, at least in the absence of evidence to the contrary, that Polynesia, as certainly as Australasia itself, must have been peopled, not from the new world, but from the old; and he would find his inference materially confirmed by the fact, that, on any and every conceivable hypothesis, the isles of the Pacific could have been colonized from the westward long before the eastern shores of that ocean contained a single family of human beings; while, on farther investigation, he would confessedly discover vastly more numerous traces of Asia than of America in the ethnographic characteristics of the Polynesian Isles.

The single, absolutely the only, answer to all this, is the physical fact that the trade-wind blows from the east along the whole breadth of the route which has just been chalked out for the primeval colonists of the islets of this greatest of all seas. Now, in the face of so much direct proof of an Asiatic origin, the evidence in question, of an American origin, amounts to nothing, unless the difficulty of advancing from west to east in spite of the trade-wind actually amounts to an impossibility.

But, so far from amounting to an impossibility, the difficulty itself, strictly so called, can hardly be said to have existed. As the trades, even at their steadiest, take to themselves a few points of elbow-room, having ranged, for instance, in our own case, as already mentioned, between N.E. and E.S.E., the Polynesian groups, occupying about fifty degrees of latitude, might all be intersected, without any formidable interventions of a

foul wind, by one and the same track, starting from the westward; and, even independently of this constant oscillation of the ordinary current of air, the same result could be still more easily and more directly attained with the aid of the opposite monsoons, which blow, with greater or less regularity, during two or three successive months of the year. Moreover, on such a point, one fact is more conclusive than a score of arguments; and, unfortunately for the partisans of the east wind, all the facts are stubborn supporters of the other side of the question. The inhabitants of each group, in whatever direction their ancestors reached it, think nothing of sailing from its westerly to its easterly islands; and Captain Beechey fell in with several men and women, who had drifted six hundred miles with a large canoe in the very teeth of the general direction of the prevailing trades.

But, even if the alleged difficulty amounted to an actual impossibility, the claims of Asia to be the cradle of the Polynesians, though they might be weakened, would yet not be disproved. The westerly gales, which generally blow on either side of the region of the trades, might carry vessels far enough to the eastward to make the tropical breeze a fair wind to the westward, more particularly if they had started from the more northerly coasts of Asia; and, in fact, one Japanese junk, in December, 1832, was driven to Woahoo, with four men alive out of her crew of nine; while again, in 1839, another was found drifting about half way on the same involuntary voyage, with several individuals on board, the same whom we afterwards saw at Ochotsk, which they had reached immediately from Kamschatka, on their homeward route from the Sandwich Islands.

Farther, if the trade-winds had really rendered a voyage from west to east impracticable, Polynesia would, in all probability, never have been peopled. There is not the least evidence for believing, there is not the slightest reason for supposing, that the aborigines of America ever possessed a canoe or any other vessel stout enough to survive the dangers of the intervening ocean, during a voyage which could not, under the most favourable circumstances, occupy less than three or four weeks. All the obstacles of the trade-wind notwithstanding, I should more readily conclude that the Marquesas colonized Southern America than that Southern America colonized the Marquesas—so far, at least, as the mere question of navigation might be concerned.

From what country, then, of Asia, did the Polynesians spring? Almost, to a moral certainty, from some point, or rather points, between the southern extremity of Malacca and the northern limits of Japan—an answer which appears to be corroborated by that most conclusive of all features of resemblance, the similarity of language. Premising that, in such a case, nothing like identity is necessarily to be expected—for, according to general experience, the human race was diffused over the globe rather by the migration of whole tribes than by the emigration of parts of them—there seems to be no ground for doubting that the dialects of Polynesia are connected with the languages of the adjacent coasts of Asia. To say nothing of the admitted fact that the Chinese residents of the Sandwich Islands pick up the Hawaiian with great facility in a short time, the Malayan tongue is universally allowed to bear a striking analogy

to the language of the groups of the Pacific. To the eye, indeed, and perhaps also to the ear, there is said to be a staggering difference in the predominance of vowels on the part of the latter, and of consonants on the part of the former. This difference, however, is susceptible of a satisfactory explanation. The concourse of consonants in the Malayan arises, in a great measure, from an admixture of the Arabic, which, to a moral certainty, must have taken place long after Polynesia began to be peopled; and, even if the admixture in question had been anterior to the colonization of any of the islands, the concourse of consonants just mentioned would, to a considerable extent, have been nominal, inasmuch as the short vowels of the Arabic are sounded without being written. But, farther, the peculiarity under consideration of the language of Malacca, supposing it to have been both original and real, would tend rather to support than to impugn the foregoing views. The Hawaiian has been shown to embody fewer consonants than the Marquesan or the Tahitian, and the Tahitian and the Marquesan again to embody fewer than the Samoan, or the Fejeean, or the Tongan, or the dialect of the New Hebrides, the *taboo* of the eastern groups, to add another instance to the instances already cited, assuming the form of *tamboo* to the westward. Now, on the very same principle, one ought not to be surprised to find that the consonants become more numerous and more harsh as one approaches to the native seats of a language so widely diffused.

To conclude this head with one remark more: if any ethnographic similitudes do exist between America and Polynesia, they may be safely considered as common

results of one and the same cause. Though the new world must have received inhabitants from the old across the strait which separates them, just as certainly as if the two were connected by an isthmus, yet it might, in all probability, have received others, and those, too, in more regular and continuous streams, along the chain of stepping-stones which extend from China to the north-west coast, comprehending Japan, the Kurile Islands, and the Aleutian archipelagoes; and, to show that this supposition is far within the limits both of possibility and of probability, a Japanese junk, such as has been used since the first settlement of the country, lately found its way to the western shores of the new continent with a living crew on board, and without the aid of any intermediate place of refreshment or of rest. In a word, America and Polynesia appear to have been chiefly, if not solely, colonized from one and the same general region of Eastern Asia.

AMOUNT OF POPULATION.

But the origin of the nation has in it less to interest us than that sentence of death which seems to be hanging over it, in common with many other aboriginal tribes of Polynesia and America.

The inhabitants of the group were estimated by Cook to be about four hundred thousand in number. But this calculation, besides being at best a guess, was inevitably based on incomplete and erroneous grounds. At each of the few points which he visited, Cook, as an object not merely of curiosity but also literally of worship, must have seen crowds that formed no part of its permanent population, while he could hardly have been aware

of the comparatively scanty extent of land capable of sustaining human life; and, independently of such extraneous causes of exaggeration, he must naturally have been disposed rather to overrate than otherwise the value of his discovery. In all probability, the actual population of the whole archipelago, when Cook visited it in 1778 and 1779, did not exceed the half of his vague estimate. In 1792, Vancouver, who had accompanied Cook on his last voyage, was led to conclude that the number of inhabitants had been greatly diminished during the interval of thirteen years, more particularly in Hawaii, the island to which hitherto Kamehameha's wars had been confined; but, though a diminution had most probably taken place, yet much of the apparent difference must have arisen from the circumstance that ships were no longer regarded as the floating temples of a race of gods.

In 1832, the first census was taken; and since then a second, in 1836. I subjoin the results, in connexion with the dimensions and area of each of the inhabited islands, expressed respectively in running and square miles:—

Name.	Dimensions.	Area.	Population.	
			1832.	1836.
Hawaii . .	88 by 73	4,000	45,792	39,364
{ Mowee . .	48 by 30	620	35,062	24,199
{ Lanai . .	17 by 9	100	1,600	1,200
{ Molokoi . .	40 by 7	190	6,000	6,000
{ Kakoolawe . .	11 by 8	60	80	80
Woahoo . .	46 by 25	530	29,755	27,809
{ Kanai . .	24 by 22	500	10,977	8,934
{ Niihau . .	20 by 7	90	1,047	995
Whole Group		6,090	130,313	108,579

In or about 1840, a third census, I believe, was taken, which, though I have not seen the whole of the official returns, is yet generally considered to have reduced the population to about eighty-eight thousand, a number which, from such partial information as I have been able to procure, I have no reason to regard as less than the truth. Kauai, the most level and productive island in the group, is divided into four districts, in every one of which, as the following short table will show, the young of both sexes, under eighteen years of age, complete, amounted, according to the census in question, to something less than a fourth part of the whole population:—

Boys and Girls .	706	309	372	685
All others . .	2,229	1,043	1,178	2,134
Totals . . .	2,935	1,352	1,550	2,819

Here was an average of one person under eighteen to rather more than three persons above it—a state of things which would carry depopulation written on its very face, unless every creature without exception were to attain the good old age of seventy-five. But the disproportion between progeny and parents would become still greater, on taking into account the fact that many of the “boys and girls” must have had “boys and girls” of their own, so as to leave perhaps hardly half a child to each couple of those who were classed as men and women in the census. One district in Woahoo afforded the only instance in which the disproportion in question was materially lessened, the inhabitants under eighteen and those above it respectively amounting to

809 and 1983; but even there the fatal destiny of the people was rapidly accomplishing, the births for the year then last past having been 61 and the deaths 132; so that, if all the 61 infants had swelled the list of deaths as well as of births, still 71 individuals must have perished—a deficiency about one-sixth greater than all the infants, if strong and healthy, could ever have supplied. To conclude this notice of the census of 1840 with one fact more, the most populous three districts of Kauai, containing between them 5,541 adults, possessed only 68 men and 65 women, who had more than two children each, in the face, too, of the bribe offered to all such in the shape of an exemption from certain taxes.

Of the only two modes in which depopulation can be doing its work, deficiency of births is shown by these details to be far more influential than excess of deaths: in other words, a nation is rapidly vanishing from the face of the earth, because its ordinary degree of tear and wear is not recruited from the ranks of a rising generation. Till lately, it is true, this was not so decidedly the case, temporary causes having operated, for a long time after the date of the discovery, to carry off the old perhaps in a greater ratio than the young. Kamehameha's wars, conducted, as they were, on an unusually extensive scale, and rendered more fatal by the use of firearms, destroyed thousands in battle; while, through the famine and pestilence which followed in their train, they indirectly more than doubled the slaughter. Again, these wars were almost immediately succeeded by a still heavier scourge, in the prosecution of a trade which, by a mysterious dispensation of Pro-

vidence, virtually sacrificed to the idols of a foreign land a far greater number of human victims than had ever been actually consumed on the blood-stained altars of the group. Sandal-wood, in which the islands abounded, was known to bring high prices in China, where it was burnt, as a fragrant offering, before the images of the gods; and being, therefore, found to furnish the best means of supplying those artificial wants which occasional glimpses of civilization had created, it was sold in such quantities, as, in one particular year, to have yielded about four hundred thousand dollars.

The procuring of this lucrative medium of exchange caused, in various ways, an enormous waste of life. As the sandal-wood grew chiefly on rugged and almost inaccessible heights, the natives, accustomed, as they were on the coasts, to a temperature approaching more nearly to perfection, both in degree and in steadiness, than perhaps any other in the world, were doomed to endure the chilly air of the mountains without shelter and without clothing, the cold of the night being aggravated by the toil of the day; and, when they had accomplished their tasks with bodies enfeebled by these constant privations, and not uncommonly also by want of food, they were compelled to transport the whole on naked shoulders to the beach, by paths hardly practicable in many places to an unburdened passenger. As a matter of course, many of the poor wretches died in their harness, while many more of them prematurely sank under the corroding effects of exposure and exhaustion.

During the reign of Kamehameha, who monopolized the trade in question, such evils were in a considerable

degree checked by his comparatively enlightened policy ; but no sooner was he succeeded, in 1819, by Liho Liho, than they were not only systematized in the most cruel manner, but accompanied by incidental evils fully as fatal as themselves. That thoughtless and dissipated youth surrendered his father's monopoly to individual chiefs, who knew as little of wisdom as they did of mercy ; to hard-hearted oligarchs, in whose eyes satins and velvets, china and plate, wines and sweetmeats, were infinitely more precious commodities than the lives of serfs. Under the new order of things, the men were driven like cattle to the hills, to every cleft in the rocks that contained a sapling of the sacred fuel ; while, through the consequent neglect of agriculture and the fisheries, the women and children, without the controlling power either of social decencies or of domestic affections, were left to snatch from each other, the strong from the weak and the weak from the helpless, such miserable pittance as rapacious tyrants and hungry thralls were likely to spare for idle mouths. Never was the force of the psalmist's curse, " Set thou an ungodly man to be ruler over him," more clearly illustrated.

Happily, however, the calamities, which once so fearfully thinned the adult population, contained in themselves the seeds of their own cure. Kamehameha's wars established universal and perpetual peace ; and the almost utter extirpation of the sandal-wood divested the chiefs of their principal motive for withdrawing their vassals from the ordinary tasks of procuring and preparing the means of human subsistence.

To return to the consideration of the present time, there are two causes which still continue, though in

very unequal proportions, to poison the sources of national life ; a spirit, or at least a practice, of emigration among the men, and the depravity of the women. With regard to the first point, about a thousand males in the very prime of life are estimated annually to leave the islands, some going to California, others to the Columbia, and many on long and dangerous voyages, particularly in whaling vessels, while a considerable portion of them are said to be permanently lost to their country, either dying during their engagements, or settling in other parts of the world.

Though this constant drain doubtless has, and, in fact, must have, an unfavourable influence on the annual increase of the people, yet, as it diminishes the number of adults at least as certainly, if not so extensively, as of children, it accounts, only in a very trifling degree, for the disproportion between the old and the young ; while, at the same time, the census of 1840 shows either that the cause is exaggerated, or that its effects are overrated ; for, in the four districts aforesaid of Kauai, the taxable men, as distinguished from old men, and the taxable women, as similarly distinguished, were respectively 2,784, and 2,213 ; the former bearing to the latter a ratio somewhat higher than that of five to four. On the second, therefore, of the two causes mentioned at the beginning of this paragraph, the depravity of the women must mainly rest the blame of poisoning the sources of national life ; and, unfortunately, it is but too able to bear the burden. Speaking of the mass, the females of the Sandwich Islands are worthy representatives of those of their sex who, after Cook's death, witnessed with indifference from the ships the slaughter of

their countrymen and friends; while, as if still more unequivocally to evince their want of feeling, they pronounced the conflagration of the neighbouring village to be "a very fine sight." In fact, this comparison, so far as the story has just been told, involves a libel on the dead; for, as they were not necessarily the mothers of any of those whose miseries they mocked, they might still have possessed, when occasion should draw it forth, that maternal love which palpably finds no home in the bosoms of their descendants.

To say nothing of such things as infanticide, and that, too, in its most appalling form of living burial, or of artificial abortion, with its consequent sterility, the mothers of the Sandwich Islands indulge in the lesser abominations of exchanging children, and of allowing pet puppies to share Nature's food with the offspring of their own wombs,—the latter habit strongly contrasting in motive with an incident of the kind mentioned by Baron Wrangell, in the case of an aboriginal woman of Siberia, who, after a season of great mortality among the sledge-dogs, suckled two young ones, the sole remains of her husband's team, to be the germ of a new stock. So far from wondering at the numerical deficiency of the rising generation, we ought rather to be surprised that there is a rising generation at all in a country where women regard their own infants and those of others with equal affection, and lavish on either far less of their fondness than on the progeny of one of the lower animals.

Previously to the discovery, it is true, the women (the fair reader must really pardon the expression) were the same devils in human shape; and yet the work of

depopulation had not then begun. Down to that epoch, however, the disposition of the sex was controlled, singularly enough, by a state of war, as it has, since that time, been developed, at least as singularly, by the beginnings of civilization.

As there were constant rivalries not only between the different islands but also between the different sections of each island, every chief had a direct interest in increasing the number of his dependents, and in maintaining them in a condition fit for service; and he had, therefore, a motive, such as was level to the most untutored capacity, for generally acting as the father of his people. If his vassals were made to labour, they produced or collected the necessities of life, the only wealth then known; if he exacted from them a share of the fruits of their toil, he kept open hospitality for all comers. In a word, each little community had for its common object the supply of the common wants. This state of things, now so obsolete as to look like a romance, is shadowed forth in the following short specimen of the ancient songs—a funeral wail for a departed leader:

Alas! Alas! dead is my chief,
Dead is my lord and my friend;
My friend in the season of famine,
My friend in the time of drought;
My friend in poverty,
My friend in the rain and the wind,
My friend in the heat and the sun,
My friend in the cold from the mountain,
My friend in the storm,
My friend in the calm,
My friend in the eight seas;
Alas! Alas! gone is my friend,
And no more will return.

In those times, the influence of the chief was, of course, powerfully directed towards the rearing of children, while the abundance of food was such as seldom to bring the mother's personal convenience into collision with her feudal duty. Soon, however, peace and commerce, which casually came hand in hand, wrought a change somewhat analogous to that which similar causes gradually produced in the wilder parts of Scotland. The rank and safety of the chief no longer depended on the number and efficiency of his followers, while, in order to purchase the luxuries of civilization, he filched from them their necessities of life, or, as in the case of the sandal-wood, screwed out of them that labour which ought to have supplied the simple wants of themselves and their families. In the consequent struggle for food, women, if they had failed to stifle life in their wombs, regarded their infants as intruders; and, without waiting for that extremity of famine which more than once made the daughters of the most enlightened city of the times devour their own offspring, they deliberately and systematically got rid of their unbidden guests, merely as a matter of general precaution; while, in the taxation of every head on the part of the merciless oligarchs, fathers as well as mothers were furnished with a still more definite motive for regarding their little ones as natural enemies.

But the result, as stated by one of the missionaries, is far more conclusive than any language of mine. In 1824, Mr. Stuart wrote thus: "We have the clearest proof, that in those parts of the islands where the influence of the mission has not yet extended, two thirds of the infants born perish by the hands of their own pa-

rents before attaining the first or second year of their age." Since that time, it is true, the tyranny of the chiefs has been limited and mitigated by law, though perhaps more decidedly in theory than in practice ; but still the taxation, which will be detailed hereafter, is high enough to leave parent and child at issue in the grand business of keeping body and soul together ; and, even without reference to any public exactions, the general diffusion of a taste for foreign finery brings the infant into competition, too often, I fear, into hopeless competition, with such merely external symbols of civilization as shoes, and gowns, and bonnets. But, in addition to all this, civilization has an account of much longer standing to settle. The original discoverers introduced a certain malady which, though prevented by the matchless salubrity of the climate from destroying adults, tends to poison the springs of life almost as effectually as the system of artificial abortion. If the latter permanently incapacitates a woman for becoming a mother, the former brings the infant into the world with its sentence of speedy death engraven in its very constitution.

Viewed, therefore, by itself, civilization has been, and still continues to be, a cankerworm, to prey on the population of the group. When a superior race, without fraud or violence, plants its thousands where an inferior race could hardly maintain its hundreds, nothing but the mere mawkishness of sentimentality could attempt to avert or retard the change ; but there is something truly deplorable in the reflection that, in this archipelago, civilization is sweeping the aborigines from the land of their fathers, without placing in their stead

others better than themselves. If there be any truth in the preceding paragraphs, which the paramount importance of the subject has induced me to extend far beyond my original intention, the principal measure for preserving the native population—indispensable even to the white colonist as the only means of supplying him with labourers—appears to be the elevation of the female character. Now, there are only two instruments by which this elevation can possibly be effected, Christianity and public opinion,—the attempt, such as has been made, to enlist pecuniary penalties in so sacred a cause, involving not merely a blunder but a crime.

In a climate which ripens girls of eight or nine into womanhood, how cruel, how preposterous, how futile, to expect from the terrors of the law any other fruits than the ingrafting of hypocrisy on licentiousness, the stifling of evidence by such means as may almost be said to anticipate puberty by barrenness ! But the penal regulations against that intercourse between the sexes, which has been so common that chastity has no name in the language, are, in themselves, as repugnant to the spirit of Christianity as they are, in their consequences just mentioned, subversive of the influence of public opinion. Considering the gross ignorance of the people, there can be but little doubt that the practice of exacting money for offences which Christianity alone has, in their notions, created and defined, has the same practical tendency as that system of indulgences which Luther reprobated ; in a word, the seventh commandment and its human sanctions are doubtless blended together by the islanders into something very different from the peremptory simplicity and conscious dignity of the

Divine command. “Thou shalt not commit adultery—*at least without paying down so many pieces of silver*”—is a precept which, whether viewed as a license or as a threat, degrades religion, without even the poor pretext of rendering it popular. This desecration of the decalogue, strange to say, was virtually the work of the earlier missionaries, however ingeniously they played the part of special pleaders in refuting the accusation. If they did not frame the absurd laws in question, they sanctioned them when framed; if they did not dictate the words, they inculcated the principles; if they did not mould the letter, they suggested the spirit. The sooner the missionaries get rid of such doubtful aids, so much the better for the cause to which they are, I firmly believe, most zealously devoted; and, even without reference to religion, they ought, on the mere score of morality, to discountenance a penal system, in spite of which, or, as many assert, in consequence of which, infanticide, at least in the same proportion in which it may itself have been diminished, has been succeeded by that surer mode of cheating the treasury which, in destroying the life of one child, prevents the birth of others by undermining the mother’s constitution.

If it be true—and it appears to be undeniably so—that the depopulation of the group is mainly to be imputed to physical privations acting on moral depravity, the enforcing of the seventh commandment by means of extortion could hardly fail to aggravate the evil which it pretended to remedy. With respect to moral depravity, the law, as we have seen, has rather altered its direction than its essence; while, with regard to phy-

sical privations, it exposes, at a moderate computation, more than half the islanders of either sex to the chance of paying, in a month, as many fines as may be equivalent in amount to the taxes of a year. Instead of thus embittering the malady, which is eating its way into the very existence of the people, let the missionaries weary their zeal in kindling the flame of pure and undefiled religion in the female heart; in humanizing, by means of the gospel, the dispositions of those who may be said, in a subordinate sense, to control the issues of national life and death. If many of the transgressors are too young to be permanently affected by merely spiritual considerations, let the women of maturer age be taught to bring to bear on youthful females in general, and on their own daughters in particular, the influence of education and example. In a word, let the reign of terror pass away; and let "persuasion do the work of fear."

On this point, the past experience of the mission is full of hope for the future. Though the women, as being, of course, the grand agents in the systematic work of quenching infant lives, are naturally more callous and obdurate than the men, yet they have exhibited far brighter and more numerous proofs of that change of heart, which is the single end and aim of pure Christianity. To say nothing of such female chiefs as possessed political power, inasmuch as their religious zeal was, more or less, liable to the suspicion of being a political instrument, Kekupuohē, who, in Cook's days, was one of the wives of the King of Hawaii, and who was subsequently made captive by

Kamehameha, evinced the sincerity of her conversion, which took place in 1828, by learning to read, under the weight of more than fourscore years, and by imitating hymns in honour of the God of her old age. I subjoin a version of her ode on the creation :—

God breathed into the empty space,
And widely spread his power forth—
The spirit flying, hovered o'er :

His power grasped the moveable—it was fast;
The earth became embodied,
The islands also rose.
God made this wide, extended heaven ;
He made the heavens long, long ago ;
He dwelt alone, Jehovah by himself—
The Spirit with him.

He fixed the Sun his place,
But the islands moved, moved the islands,
With sudden, noiseless, silent speed :
We see not his skilful work—
God is the great support that holds the earth.

LANGUAGE.

Perhaps as good a specimen of the native tongue as I can produce is to be found in the following effusion of the venerable poetess just mentioned :—

Ahiai no o ikea ka mea nani,
He mea kupanaha, he hemolele wale no,
He mohala ka nani, he mae ole ke ano ;
He hao ke kumu, he miliohe, he hookuhi :
Hookahi no kumu waina maoli, O ka haku.

O ka lala e piliana ia ia, ua hua ia,
Ua hua hoi ka hua, he maikai
Malaila ke ano e akaka ai,

O ka lala e hōkamakamani ana coki aku,
 O huuluu hewa ke kumii,
 O kaumaha hewa wale hoi ia ia.

Once only hath that appeared which is glorious—
 It is wonderful, it is altogether holy ;
 It is a blooming glory ; its nature is unwithering ;
 Rare is its stock, most singular, unrivalled—
 One only true vine—it is the Lord.

The branch that adheres to it becomes fruitful—
 The fruit comes forth fruit ; it is good fruit—
 Whence its character is clearly made known.

Let the branch merely making fair show be cut off,
 Lest the stock should be injuriously encumbered,
 Lest it be also by it wrongfully burdened.

The characteristic feature of these verses, and, in fact, of all the poetry and prose in the language, is a childish taste for the repeating of the same thought in nearly the same words—a taste which appears, moreover, to have exercised a powerful influence over the forms of very many individual words. Thus *palapala*, books ; *lumeelumee*, to shampoo ; *mukeemukee*, lore ; *loulou*, a trial of strength by hooking the fingers ; *kulakulai*, wrestling in the sea ; *honuhonu*, swimming with the hands alone. Whether the halves of these double words are generally significant themselves, or whether, in such cases, the wholes generally derive their meaning from the parts, I cannot say—my only elements of knowledge in the matter being, that, while *moku* is an island, or a ship, or a canoe, *mokumoku* is pugilism ; that, while *la* is the sun, *lala* is a branch ; and that, while *kamehameha* is the lonely one, *kameha-*

malu is the shade of the lonely one. Portions of words, too, often present similar repetitions ;—thus, Honolulu, and several instances in the foregoing hymn.

Perhaps this immediate recurrence of the same sounds may be partly owing to the poverty of the alphabet, which contains only twelve letters—*a, e, i, o, u, h, k* or *t, l* or *r, m, n, p, w* ; the vowels being sounded, not as in the English, but as in the Italian ; while it may also be, in some measure, ascribed to the paucity of combinations, arising from the inadmissibility of two consonants in succession, and from the necessity of terminating every word with a vowel.

The various peculiarities of this last paragraph, some of which have been noticed under a former head, may be best illustrated by the native forms of such European words as have been adopted into the language. Thus, hymn, *himeni* ; Britain, *Beritane* ; pray, *pule* ; school, *kula* ; in addition to others already mentioned, such as fashion, *pakena* ; missionary, *mikaneri* ; and consul, *konakele*. Though these examples are sufficient to show how glibly the alleged prevalence, as formerly noticed, of consonants in much of the Malayan tongue may have been softened down, yet others, of a more decisive character, may be cited with more particular reference to that point. Thus, England has become *Enclani*, the proportion of consonants being diminished more than threefold ; and French has been disguised into *Pulani*, the proportion of consonants being diminished precisely fivefold.

If foreign words were largely incorporated, different originals would inevitably produce confusion, by running into one and the same version. Of this possibility, in

fact, an amusing instance has already actually occurred. Brandy, as well as French, has been legitimately rendered into *pulani*; so that French brandy, by the by, would be characteristically expressed, on the principle of repetition, by *Pulani pulani*. Now, brandy and catholicism, known as the French religion, or *pule Pulani*, happened to be forced on the islands by a ship of war on one and the same occasion; and the missionaries, who were as hostile to the one as to the other, were not a little delighted to find that popery and intemperance were one and the same thing in the mouths of the people.

Considering the harlequin-like transmutations of adopted words, and considering also the mutual convertibility of *k* and *t*, and of *l* and *r*, an inexhaustible field is laid open for the speculations of any curious linguist. Even without looking below the surface, several obvious resemblances between the Hawaiian on the one hand, and the Latin and the Greek on the other, have been suggested to me. Thus, *mouna*, a mountain, from *mons*; *pari*, a wall-like precipice, from *paries*; *hala*, a house, from *aula*; *pono*, good, from *bonus*: and thus, also, *mele*, a song, from *μελος*; *aroha*, love, from *εραω*; *arii*, a war-chief, from *Αρης*; *pili*, close-adhering as a friend, from *Οιλεω*; *Pele*, goddess of the great volcano, from *πυρ*, precisely in the same way as *konakele*, from *consul*; *ua*, rain from *υω*; and *rani*, the heavens, from *ουρανος*. One of these eleven examples, namely, *hula*, may perhaps be more directly derived from our vernacular *hall*, while to the same Teutonic origin may also be referred *kai* or *tai*, the sea, from *sea*, and *mahina*, the moon, from *moon*, a term which, besides being traceable eastward in some of the oriental languages, occurs also, with the correla-

tive signification of month, in the Greek $\mu\eta\nu$, and the Latin *mensis*.

To return to the general characteristics of the language, the indistinctness and confusion which arise from the scantiness of its elements, and its consequent repetition of the same sounds, are considerably aggravated by the copiousness of the vocabulary,—a copiousness which is said to have been, in a great measure, caused by the pride and policy of the chiefs, who habitually invented new words for their own peculiar use, and constantly replaced them, as soon as they became familiar to the people, with other novelties of the same kind. Under all these circumstances, to say nothing of the intricacy and precision of the grammar, a foreigner can never hope entirely to master the tongue; and even the missionaries, in spite of all their industry and zeal, often find their ears at fault, more particularly when the natives, as is their custom in cracking their jokes at the expense of strangers, chant their barely articulate strings of vowels in a quick and monotonous strain. As to the mercantile residents, they are sometimes mortified to find their most elegant Hawaiian received by the natives as pure English. Even among themselves, the natives, I apprehend, must experience an occasional difficulty in understanding each other; for, to take as an instance a word containing both the indefinite consonants, one person may say *kalo*, another *karo*, a third *talo*, and a fourth *taro*, while a fifth and a sixth may straddle the fence, as Jonathan says, so nicely between *k* and *t*, and between *l* and *r*, as to set all civilized orthography at defiance. Hence the various forms of almost every native name as put into shape by voyagers

and others, such as *Titeree* and *Kahékili*, *Timoree* and *Kaumualii*, *Terenoui* and *Kealihonui*. The missionaries indeed have introduced something like a uniform standard into their printed books, preferring *k* to *t*, and *l* to *r*; but most of the natives, if they can be supposed to aim at this standard at all, resemble, in their efforts, so many prattling children of two years of age.

With respect to the formation of compounds, the Hawaiian appears to be nearly as flexible as the Greek, a property of which the names of the chiefs furnish many apposite examples. Thus, *keopuolani*, the gathering of the heavens; *kapiolani*, the captive of heaven; *kaahumanu*, the feather mantle; *kalakua*, the way of the gods; *Lealeahoku*, the necklace of stars; *kamehamalu*, the shade of the lonely one. By the by, *kamehameha*, of which the last-mentioned example is a compound, suggests a curious coincidence between the name and the destiny of the great king of the islands. It may have been applied to him on account of some peculiarity in his condition, such as his being an only child, or an only surviving child,—a sense in which, unfortunately at the present time, the group contains many a “lonely one;” but had not the name been recorded as far back as the days of Cook, it might have been supposed to have been assumed, in consequence of his conquests, to embody the fact that he was monarch, or sole ruler, of all he surveyed; that he had raised himself above all equality, that he stood alone in his own little world. In a better sense, too, than that of warlike renown or political supremacy, Kamehameha was “the lonely one” of his country, having, as we have already seen, been the single savage of the group, who, in his intercourse with

strangers, abjured the falsehood, the treachery, and the cruelty of his race. If any individual be disposed to charge me with too frequently dwelling on the merits of this gallant and sagacious barbarian, let him first reflect how few members of civilized society overcome, or attempt to overcome, the prejudices, whether political or religious, of early education.

To return to the language: it may, on the whole, be considered as pleasing and agreeable to the ear after a time, though at first it sounds childish, indistinct, and insipid. It lacks, as a matter of course, every thing like force or expression; and though the natives, both men and women, are fond of "speechifying," and even of preaching, yet they are by no means to be compared as orators with the aborigines of North America. While the natives of the continent, more particularly on the east side of the mountains, pour forth their very hearts in impetuous torrents of natural eloquence, the islanders may be said rather to chatter with their lips; and while the former are so famous for the boldness of their metaphors, the latter, even in their attempts at poetry, speak sober prose, without knowing it, from beginning to end. In short, the language is not capable of reaching the lofty strain of the Blackfeet, the Crees, or the Saulteaux, but flows on in a mellifluous feebleness, which, though it never offends the ear, always leaves it unsatisfied.

But the Hawaiian is no longer the exclusive language of the natives. English is daily becoming more familiar to them, being partly acquired in conversation, and partly taught in schools. It is, in fact, destined, ere

long, to be the vernacular tongue of the group. It must advance as civilization advances, and the more rapidly the better; for nothing else is so likely to promote that amalgamation of the European and Polynesian races, which can alone prevent the aborigines, if they are at all rescued from the decay that threatens them, from sinking into the condition of hewers of wood and drawers of water.

At first, perhaps, the missionaries could not avoid adopting the Hawaiian language; but, in their exclusive use of it, they have, in the opinion of most of the foreign residents, done more harm than good. In the almost utter absence of native literature, the missionaries have operated on the national mind only through the medium of laborious and expensive translations,—a system which has, doubtless, had this recommendation in their eyes, that it enabled them to exercise a censorship, such as neither pope nor emperor ever exercised, over the studies of their neophytes. Whether they have ever abused this power, either in politics or in religion, I at present offer no opinion; but its mere existence assimilates the Protestantism of the Sandwich Islands, at least in kind if not in degree, to that very Catholicism of California, which the missionaries of the group are so ready to decry,—the proselytes, in either case, being subject to a tutelage, which does not even profess to train them to think for themselves. But it is not the studies only of the islanders that have been placed under clerical censorship,—their food, their customs, their amusements, &c., having all shared the same fate.

FOOD.

Under the old heathenism of the islands, the law of eating was a most complex and important affair. To say nothing of occasional and temporary prohibitions, it reserved the best of every thing for the chiefs, as distinguished from the people—and for the males, as distinguished from the females; and it, moreover, extended the privileges of its favourites to the very places where they ate. Of the law in question, every violation was a capital crime. It was death for a commoner to drink awa, or for a woman to taste a cocoa-nut; it was death for a serf to intrude on the banquet of his lord, or for a wife to enter her husband's dining-room. A system which thus proscribed females, in a country where they were as competent as males to be chiefs in their own right, could not long withstand the light of civilization. Accordingly, soon after the discovery, the taboos in question began to be relaxed and slighted, families gradually presumed to take their meals together, and women plucked up courage to nibble at cocoa-nuts. Still the law remained in force, for Kamehameha could not think of deserting, in his old age, the gods who had crowned his youth with victory; and so late as 1819, the last year of his reign, a woman was actually put to death for invading the sanctity of her husband's eating-house. In the very first year, however, after his death, the taboos on eating were abolished, chiefly through the instrumentality, as might have been expected, of a female chief. Kaahumanu, the conqueror's favourite wife, having been left as a kind of guardian or co-regent of Liho Liho, gave the young

king no peace till he annulled the religion of his fathers, by publicly eating with his queens, the rickety machine of the national idolatry falling to pieces on the removal of a single peg.

Practically, however, the common people did not find that food was free; for, though superstition was no longer the pretext, yet they were still stinted and starved as before by the tyranny of their chiefs. In process of time, moreover, a new taboo was invented by the missionaries, and that, too, on grounds almost as absurd and untenable as those on which the old taboo had rested. Laying down religious rules, of which the inspired volume knew as little as it knew of the traditions of Catholicism, which they delighted to revile, the earlier missionaries “denounced” coffee, put a stopper on tobacco, and carried on a holy war against cooking on Sunday, and against all the aiders and abettors of the same. Such arbitrary doctrines were, of course, set at nought by the foreign residents. But the police, who were not allowed, like the cooks and scullions, to enjoy a day of rest, were sometimes too vigilant for the white law-breakers; and, on one occasion, the British Consul found, on his return from church, that the enemy had seized and confiscated every thing that was guilty of being hot in his kitchen. Still, public opinion and common sense triumphed, at last, in favour of folks of every colour.

The principal food of the lower class of the population—and, in fact, the favourite food of all classes—is *poi*, which deserves especial notice, as exacting from the natives, in its preparation, a degree of labour, attention, and diligence, which would alone entitle them to

be reckoned as industrious. It is a sort of paste made from the root of the *kalo* (*arum esculentum*), a water-plant cultivated to a great extent throughout all the islands. The root in question much resembles the beet, excepting that it is not red but brown. It is reared in small enclosures, which, with great care and labour, are embanked all round, and constantly covered with six or eight inches of water; for, like rice, the *kalo* will not flourish in dry land. To insure a regular supply of the requisite element, streams are brought in aqueducts from the hills, and subdivided into a variety of tiny canals; while each canal feeds a certain number of patches, communicating with each other by means of sluices. On certain days, perhaps once or twice a week, the sluices are opened, and the patches of the system are overflowed, so that the water is prevented from becoming stagnant; a precaution which, besides its fertilizing effects, is necessary for warding off fevers, and other maladies, in a climate so warm and so free from storms. But, not contented with mere utility, the natives, after all the labour of cultivation and irrigation, often contrive to render the patches in question ornamental. In the neighbourhood of Honolulu, where the *kalo* is grown to a great extent, the patches are surrounded by a low wall, which is lined with various shrubs and trees, such as the sugar-cane, the banana, and the drooping pandanus, which thrive well in so cool and moist a situation; while the broad arrow-headed leaves of the *kalo* are in themselves not unpleasing to the eye.

The *kalo* is much used by the foreign residents as a substitute for potatoes, or rather for bread, being for

this purpose either boiled or fried. But, in this case, as in most cases of the kind, the native method of proceeding is the best. A hole dug in the ground receives, first, some red-hot stones; then a covering of leaves of the plant; thirdly, the root in layers; fourthly, another covering of leaves; and, lastly, a sufficient quantity of earth to exclude the air and confine the steam. After a few hours, your *kalo* is baked, and may either be eaten whole, just as if fried or boiled, or elaborated into *poi*. The preparation of this dish exacts fully as much care and toil as the growth of the raw material. After being cooked in the way just described, the root is beaten into a paste with such an expenditure of labour, that the task is always assigned to the men. This paste, which is of a bluish colour, is invariably put aside to ferment. When it has become sour, it is then fit for use; and then to see the natives eat it, or to hear them speak of it, one cannot but conclude that, in their estimation, it is the greatest luxury in the world. The passion for *poi* pervades all classes, from the king downwards; and the chiefs make no secret of the fact, that, after dining with foreigners on the collected dainties of both hemispheres, they take a little *poi* at home, by way, as they express it, of filling up the corners. Nor is the taste for this delicacy altogether peculiar to the natives. Though white papas and mammas rather frown upon it, as something naughty and barbarous, yet white masters and misses are generally wayward enough to exhibit an extraordinary love for the forbidden fruit, wherever and whenever it falls in their way.

At regular meals, however, *poi* is never eaten alone,

at least when the party interested can afford any addition. Happy as an emperor is he, who can flank his gourd of *poi* with a bone of pork. Squatting himself between the two candidates for his favour with as much glee as if the whole of the animal and vegetable kingdoms were his private property, he seizes the bone with one hand, and makes ready the other for an attack on the gourd. With a dexterity which ought to put civilization, with all its clumsy equipage of knives and spoons, to the blush, our enviable friend bites off the smallest possible flavour of the pork, and then, plunging two fingers into the *poi*, juggles, as it were, into his mouth, by means of a knowing jerk of the wrist, as much sour paste as would make three or four spoonfuls, even for the hungriest European. Another bite and another gulp; and “again, again, again, and the havoc does not slack,” till the performer is constrained by dire necessity to desist for want of room, and to resign himself, like the boa-constrictor, after dining on a bullock, into the arms of Morpheus.

But *poi* and pork are not the only food of the natives. Of vegetables and fruits, there are yams, sweet potatoes, sugar-cane, cocoa-nuts, bananas, &c.; of these the more palatable are devoured in great quantities, by those who can get them, between meals, and appear, in fact, to go for nothing in the grand business of cramming. Then, of the creatures of the deep, there are the turtle, the dolphin, the flying-fish, the mullet, the rock-cod, the bonetta, the snapper, the crayfish, the pearl-oyster, the shark, &c. These the natives prefer in a raw state, on the ground that they lose their flavour in cooking, considering it as the richest possible treat,

when, on their aquatic excursions, to haul a fish from the water, and literally eat it to death; but, as to ourselves, we profited to the utmost by McIntyre's culinary talents, feasting almost constantly on as much turtle as would have made a holiday for the whole court of aldermen. Like the cultivation and preparation of the kalo, the procuring of an adequate supply of fish has tended to train the people to habits of industry, the smaller kinds being kept near the villages in ponds constructed and protected with great diligence and ingenuity. Like the kalo patches, these artificial enclosures are small, being separated from each other by embankments, and supplied with water from a running stream. Towards Waikiki, the road winds, for nearly a mile, among the remains of fish-ponds, now neglected and dilapidated; but, though there abandoned, yet such works are still maintained at Honolulu, regularly furnishing its market with fresh-water mullet. In addition to vegetables, fruits, and fish, there are goats'-flesh, dog, hog, poultry, and beef,—the beef of Kauai, according to Sir Edward Belcher, being superior to any thing of the kind that he had seen out of England.

As Honolulu contains, of course, far more consumers than producers, its necessary wants are supplied from the neighbourhood in a way to be hereafter noticed. The ordinary prices may be quoted as follows:—

Beef	. 3d. to 4d. per lb.	Fowls	. . 1s. each.
Mutton	5d. to 6d. „	Turkeys	2s. to 4s. „
Pork	. 1d. to 2d. „	Salted salmon	50s. per barrel.
Sugar	. 2d. to 2½d. „	Flour	60s. per 200 lbs.
Fish variable, but always moderate.			

Over and above what may be considered as neces-

saries for the table, the group in general, and Honolulu in particular, is supplied, in an eminent degree, with nearly all the luxuries of every clime. At the feasts of the foreign residents, champagne and claret flow with lavish hospitality, while the lighter and rarer viands of every name are brought direct from the richest countries on the globe,—from England and France, from the United States and Mexico, from Peru and Chili, from India and China. In fact, such sumptuousness of living as we experienced, day after day, from our numerous friends, is perhaps not to be found any where out of London, and even there is seldom found in all its unadulterated genuineness.

Nor are the principal natives of Honolulu far behind the respectable foreigners in this matter. In proof of their advance in material civilization, let me contrast an instance of royal gastronomy, recorded by the Rev. Mr. Stewart twenty years ago, with an evening in my own banqueting experience, spent at Governor Kekuanaoa's.

Having visited Liho Liho along with Mrs. Stewart, the journalist thus proceeds: "Pauahi, the only one of his queens who had accompanied him from Oahu, was seated, *à la Turc*, on the ground, with a large wooden tray in her lap. Upon this, a monstrous cuttle-fish had just been placed, fresh from the sea, and in all its life and vigour. The queen had taken it up with both hands, and brought its body to her mouth; and, by a single application of her teeth, the black juices and blood with which it was filled gushed over her face and neck, while the long sucking arms of the fish, in the convulsive paroxysm of the operation, were twisting and

writhing about her head like the snaky hairs of a Medusa. Occupied as both hands and mouth were, she could only give us the salutation of a nod. It was the first time either of us had ever seen her majesty; and we soon took our departure, leaving her, as we found her, in the full enjoyment of the luxurious luncheon."

Now for Kekuanaoa's supper. We were received by the Governor in his hall of justice, an apartment large enough for the church of a considerable parish, being sixty feet long, thirty broad, and about thirty-five or forty feet high, to the ridge pole of the roof. We there found assembled to meet us, Dr. Judd, surgeon of the missionary body, and three native chiefs, Paki, Kealiihonui, and Kanaina; the first two of the three, as well as his Excellency himself, being remarkably tall and handsome men. In his youth, Kealiihonui was, according to the Rev. Mr. Stewart, a perfect model of manly beauty. He is son of Kaumualii, the last king of Kauai, who was, in mind as well as body, one of the finest specimens of the race, and died in captivity at the court of Liho Liho. Kealiihonui and his father, after the loss of their dominions, enjoyed the honour of being joint husbands of Queen Dowager Kaahumanu, already mentioned as co-regent of the kingdom, after her first lord's death; polygamy and incest powerfully aiding, in this case as in many other cases, the policy of engrafting every rival into the dominant family of Kamehameha. The remaining chief, Kanaina, was husband of the present co-regent, a sister of the king; but it was questionable how long he was to possess that high distinction, for he was said to have come to Honolulu to stand his trial for being a gallant, gay Lothario, with a view

to his being divorced. But, as he was small, and for a chief, utterly puny, there were not wanting charitable souls who asserted that his royal consort did not much regret the painful necessity of shaking off a partner whose bulk and weight did so little to recommend him, and who farther insinuated that she was merely making a vacancy for the relict of Kinau, her sister and her predecessor in the co-regency, old Kekunaoa himself.

The chiefs were all handsomely attired in the Windsor uniform, their clothes fitting to a hair's breadth: so particular, indeed, are the aristocracy in this respect, that they have imported a tailor from England for their own exclusive benefit. Supper being announced, the chiefs, each taking one or two of our party by the arm, conducted us across an open area to another apartment of considerable size, built in the European fashion, and handsomely furnished with tables, buffets, chairs, sofas, &c., the whole, or nearly the whole, being of native wood and native workmanship. The main table would have done no discredit to a London mansion, covered, as it was, with glass and plate, and lighted with elegant lamps. The fare was very tempting. It consisted of fruits of all kinds, sweetmeats, pastry, Chinese preserves, &c., with excellent tea and coffee; the latter, which had been grown in Woahoo by the governor himself, being fully equal to Mocha. Our plates, by the by, had been marked with our names, and we had been told to take our seats accordingly, his Excellency sitting at one side among his guests. In fact, the whole proceedings blended the most punctilious regard to etiquette with the cordiality of natural politeness, beating out and out and over again all that we had seen in

California, in every respect, in room, in furniture, in equipage, in viands, in cookery, and in dress. Nor were our native companions themselves so decidedly inferior as civilized vanity might fancy. The chiefs, especially our host, were men of excellent address; and, as they spoke English enough to be understood, we soon forgot that we were sipping our coffee in a country which is deemed uncivilized, and among individuals who are classed with savages.

There were but few incongruities in the course of the evening's entertainment, such as could at all mar the effect, excepting that Kanaina frequently inquired with much solicitude, as if he felt that he must soon be in the market for a new wife, whether or not we thought his whiskers handsome; and excepting also that, on going into an adjoining apartment, we caught a glimpse of a pair of legs just disappearing beneath the hangings of a fine bed. The legs in question some of our connoisseurs pronounced to be the property of a young lady; but, be this as it may, Kekuanaoa is hardly ever to be seen, whether at home or abroad, whether under a roof or in the open air, whether on the land or on the water, without a bevy of beauties, who hang about him like his shadow, without appearing to discharge any very definite or important functions. After chatting a good deal and smoking a few cigars, we took our leave, highly gratified with the hospitality and courtesy of the governor and his friends.

Nor was this our only specimen of the amelioration of the social habits of the higher classes. During our sojourn, the governor and his chiefs favoured us with their company at dinner. They conducted themselves

with ease and propriety, having now laid aside the habits of intemperance in which their order was wont to indulge, as also the peculiar style of conversation to which such habits generally led. Formerly, it was a critical business to entertain the grandees in presence of ladies; for, as soon as the wine began to do its work, they would gradually become more amatory in their remarks than was either agreeable or safe.

To finish this subdivision of the chapter, the white residents generally condescend to adopt the native cookery to a certain extent in their picnic parties, characterizing, in fact, such convivialities by the name *luau*, the vernacular word for the hole or pit which serves the purpose of an oven. In these cases, the presiding genius is a hog, or a dog, or a turkey, or a goat, or, peradventure, a fowl or a fish, baked in the manner already described with respect to the *kalo*, excepting that, in addition to the hot stones in the pit, the creature has two or three such articles in its belly. These parties, however, are not so fashionable as they once were. Nor is this much to be regretted; for the baked animal was perhaps less of an attraction than its liquid trimmings; and certain it is, the gentlemen, on their return, required all their legs and eyes to steer clear of the cold baths which beset them on every side in the shape of *kalo* patches.

HOUSES.

The dwellings of the natives are extremely neat and clean, both internally and externally; and, setting aside the residences of some of the great people, they have undergone very little change, excepting perhaps in

dimensions, since the days of the discovery. They are constructed of a framework of bamboos, covered with grass; and, as the roofs are high and pointed, and the walls present no other opening than a single door, the whole thing looks, from every side but one, more like a hay-rick than anything else. The interior, however, generally has a remarkably tidy appearance; the regularity of the framework, and, still more strikingly, of the knots with which the grass is made to keep its place, have a pleasing and pretty effect, while the uniform brown of the structure looks cool and refreshing to the eye.

The furniture is very simple, though generally sufficient for the wants of the inmates in such a climate. The floor, being merely the bare earth, is covered with straw mats, while low piles of the same articles, often furnished with sheets, coverlets, and pillows, constitute at once beds and bedsteads. The rest of the furniture is comprised in a few gourds and calabashes for food and water, and in a box or two, and a shelf for the stowage of all their little odds and ends.

The houses are commonly separated into sleeping and sitting compartments, by means of curtains hung across from wall to wall; but every thing, whether exposed to view or not, whether within the house itself or merely within the surrounding enclosure, is scrupulously clean and neat, presenting, in this respect, a wonderful contrast with the filth and confusion of most of the native lodges of the continent. At whatever time of the day we dropped into a house, we found no difference in any of these particulars; there was never any unpleasant smell about the premises, all the refuse of fish, vege-

tables, &c. being regularly carried to a distance. In fact, so far as my experience has gone, cleanliness may be ranked among the cardinal virtues of the Sandwich Islanders; for the scorpions and centipedes, with which some of the houses absolutely swarm, it appears to be almost impossible to keep out or to get rid of. Musquitoes, though numerous, are not indigenous, having been imported from California—one of the best authenticated instances on record of the emigration of these tiny tormentors of man and beast.

From the foregoing description, the houses are in themselves evidently light and portable; and, as they have no more hold of the ground than a beehive, they are, in point of fact, moved about from place to place, as we had several opportunities of observing, with very little trouble. To the end of a good hawser, which is tied round the lower part of the mansion, there hang on some twenty or thirty “kanakas,”—who, with one of their wild, cheerful songs, whisk away the concern to its new home as easily as if they were towing a ship through the harbour to her moorings,—a most convenient and economical receipt for the opening and widening of streets and squares.

Some of the chiefs, as we have already seen in our account of Kekuanaoa’s feast, have had houses built in the European fashion, the materials being, according to circumstances, wood, or adobes, or limestone, or coral. But, with their characteristic ingenuity in the financial department, they have contrived to extract the cost of most of these more solid edifices out of the pockets of the public in general, and of their own dependants in particular. Elsewhere, the expense of

house-warming falls on the man who is to enjoy the edifice ; but your Hawaiian house-warmer permits no one, on any pretext, to cross the threshold of his new snuggerly for the first time, till his visitor has paid down a tax, or gift, call it what you will, proportioned to his rank and means. Considering how convenient, or how agreeable, it is to be on visiting terms with a great man, the contributions in question have often run up to a respectable amount ; and, perhaps, in places nearer home, a leader of the fashionable world might build himself a residence for nothing, and pocket money into the bargain, if only he could or would sell the *entrée*, on the Hawaiian principle, to all comers.

DRESS.

In the days of heathenism, the ordinary apparel of the natives of all classes was as primitive as possible, being a *malo* of the scantiest conceivable dimensions for the men, and a *pau*, or very, very shallow petticoat for the women ; and, in this state of nudity, the highest chiefs of either sex used to board the foreign vessels without ceremony or apology. Though the more wealthy members of the community possessed, long before the introduction of Christianity, plenty of fine clothes, yet they regarded them as merely ornamental—as something which was as little necessary on the score of modesty as in point of comfort, as a kind of tatoo that could be put on or taken off at pleasure.

The only other garment in general use,—and this did not much mend the matter,—was the *kapa*, which was merely a square piece of native cloth, tied by the two upper corners in a large bow near the right shoulder,

and hanging loosely behind half way down the legs,—a *facsimile*, in short, excepting as to the fabric, of the Spanish cloak of the days of Charles the First.

All these habiliments used to be made of the native cloth,—the *kapa*, in fact, deriving its name from the same; the process of manufacturing and colouring it I shall describe hereafter. Among the chiefs, however, feather cloaks of a more or less costly description were in high esteem; and perhaps nothing can give a better idea at once of the pomp and power of the native monarchs than the following description of the coronation-cloak of Kamehameha the Great. The description in question is from the calculating pen of one of the missionaries:

“His majesty Kauikeauli, the reigning king, has still in his possession the *mamo*, or feather war-cloak, of his father, the celebrated Kamehameha. It was not completed until his reign, having occupied eight preceding ones in its fabrication. It is four feet in length, with eleven feet and a half spread at the bottom. Its groundwork is a coarse netting, and to this the feathers, which are very small and exceedingly delicate, are skilfully attached, overlapping each other, and forming a perfectly smooth surface. The feathers around the border are reverted, and the whole presents a beautiful bright yellow colour, giving it the appearance of a mantle of gold. Indeed, it would be difficult for despotism to manufacture a richer or more costly garment for its proudest votary. Two feathers only (such as are used wholly in its manufacture) are obtained from under the wings of a rare species of bird inhabiting Hawaii, which is caught alive with great care and toil.

Long poles, with an adhesive matter smeared upon them and well baited, are placed near their haunts. The bird alights upon it, and, unable to disengage itself from the adhesive matter, is secured, the much-prized feathers plucked, and the bird set at liberty. A piece of nankeen, valued at five dollars and a half, was formerly the price of five feathers of this kind. By this estimate, the value of the cloak would equal that of the purest diamonds in the several European regalia; and, excluding the price of the feathers, not less than a million of dollars worth of labour was expended upon it at the present rate of computing wages."

The native attire, as just described, having obviously been quite incompatible with any moral or religious improvement, the missionaries and their wives, immediately on their arrival, set about remedying the crying evil, very properly adopting, in defiance of their instructions, the principle that, in this instance at least, civilization must precede Christianity; and they have been entirely successful in introducing decency, if not modesty, among the females. In Honolulu, the women look as if dressed in the missionary uniform; for, though their gowns differ in colour with every varied hue under the sun, flaming yellow, pure white, bright red, and the like; yet they are, to say nothing of the general sameness of materials, all cast in one mould. They are, in fact, something like bathing-wrappers, coming pretty high on the shoulders, where they are finished off with a fringe, and having sleeves loose and full, like those of a clergyman's surplice, while the body and skirt, in one, hang freely down to the ankles without being confined at the waist. This wrapper, however, constitutes the

whole of a woman's daily attire. The feet and ankles are still left in a state of nature, excepting that the tatoo, which, like the touching of noses, has become obsolete for other purposes, continues to be sometimes applied to the ankles, in the idea of making the feet look smaller. The head, again, though not absolutely bare, yet presents, according to the ancient fashion of the Hawaiian beauties, nothing but wreaths of flowers and leaves, and coronets of yellow and red feathers,—ornaments which are all elegant and becoming, and remind one of the convivial costume of classical antiquity.

This description, however true it may be for six days in the week, is totally inapplicable to Sunday. Shoes and stockings, bonnets and parasols, are now in vogue, while the sober chintz is perhaps thrown aside at home, and sees the flaunting silk sail away to church in its stead. Compared with the graceful simplicity of their ordinary costume, all this finery on the part of these brown belles forcibly reminds one of the sentiment, that “beauty, when unadorned, is adorned the most,”—a sentiment, by the by, which they at one time carried to too literal an excess. Their badly-made shoes make their feet look large and clumsy; their flashy bonnets,—just fancy them of white satin, trimmed with lace,—give to their dark complexions a hideously sallow hue; and the attempt at fashion in the cut of their showy robes, joined to the awkward consciousness of being all very grand, completes the burlesque on the English and American ladies of the place.

The men, however, have not proved to be so apt pupils as the women,—the missionary civilizers perhaps having, for very obvious reasons, taken greater pains in

the premises with the latter than with the former. Many of the men still swear by the wisdom of their ancestors; and it is no uncommon thing to see a finely-dressed female walking arm in arm with a husband unencumbered in his person with any more of this world's possessions than a *malo* of twelve inches by three. The only constant addition to this scrap of an apology for clothes is the wreath of flowers and leaves, which is worn by the one sex as well as by the other,—a piece of effeminacy which is not without its use, for the ornament in question is generally so arranged as to shade the eyes from the sun. Nor must it be forgotten that the graceful *kapa*, already described, still occasionally forms part of the costume of almost every individual of either sex.

But even among the men there are some exquisites, being chiefly those who have at once enlarged their notions, and saved a little money abroad. These fellows, so long as their cash lasts, lounge and saunter all day in the sunshine, habited in military surtouts, with frogs, &c. all complete, in white trousers, which fit them like their skins, in fashionable boots, in round hats, and in kid gloves of some gay or delicate colour, with their snowy wristbands turned back over their cuffs, the whole dandy being finished off with cane and eye-glass. In process of time, these bucks relapse, as a matter of course, through all the stages of worse-for-the-wearishness, shabbiness, and dilapidation, down to the *malo*, with perhaps a garland on the head and a *kapa* on the shoulders.

In fact, even among the higher classes, the abstract idea of clothes still involves far more of the ornamental

than of the useful. Nor ought this to be a subject of wonder. So far as the climate is concerned, raiment is rather a burden than a benefit to the natives ; and, as to moral motives, they have hardly any influence with the men, while they have probably less to do with the apparent decency of the women than a love of display. But, whatever may be the cause, the notions of the chiefs, even of the female chiefs, with regard to dress, are very far from being decidedly utilitarian. Witness the following ludicrous and inconvenient appropriation of a whole web of woollen cloth to the wants of a single lady, and that, too, in an atmosphere which would have made a salamander comfortable. At a festival celebrated in 1823, to commemorate the death of Kamehameha, one of the dowager queens—the others, by the by, being pretty well packed also,—sporting seventy-two yards of kerseymere, one half of it being scarlet and the other orange ; while, as the breadth was doubled on itself, the whole quantity was equivalent to one hundred and forty-four yards of single fold, something, I take it, like the height of St. Peter's at Rome. The only way, of course, in which her majesty could haul in the slack, was to have it wound, like thread on a reel, round her portly waist ; and when this process had gone on till her arms were supported in a horizontal position, the remainder was borne, as a train, by her admiring attendants. This martyrdom was endured, within a month of a tropical midsummer, throughout the whole of a tedious and ceremonious procession. Perhaps in more civilized countries, royalty, on occasions of state, is only a gilded weariness both of flesh and spirit.

The inhabitants of a warm climate, as if in imitation

of the birds, exhibit in their dress a greater variety of colours than the denizens of colder regions. What a difference in this respect between the variegated dwellers in Honolulu and the dingy citizens of London! The women, presenting to the cloudless sun the countless hues of the flower-garden, form a curiously suggestive contrast with the deep brown of the almost naked men, most of whom might be models for a sculptor; while a small sprinkling of many foreign costumes serves still farther to heighten the beauty and interest of the scene.

APPEARANCE AND DISPOSITION.

In complexion, the natives look like a connecting link between the red man and the negro, being darker than the former, though still removed many degrees from the sooty hue of the latter; they exhibit perhaps about the same tint as the Moors of the north of Africa. In regard to hair also, they occupy the same intermediate position: in all of them it is black; curling, or rather waving and undulating in general, and being long and straight, like the red man's, in some individuals. In feature, they are rather Asiatic than otherwise; nose full without being flat, face broad, eye black and bright. In form, they are commonly handsome, strong, and well limbed, while, in height, they are, in general, something above the average standard of Europeans. On the whole, they are, as a race, considerably above mediocrity, both in face and in person. The women in particular are decidedly pretty. They have a most lively expression of countenance, and are always smiling and attractive; and their figures may even be admitted to be beautiful and feminine, seldom inclining, when young, either to corpulency

or to the opposite extreme, limbs and busts well formed, and hands, feet, and ankles, small and delicate, while their gait and carriage, though somewhat peculiar, are yet, on the whole, noble and commanding.

In the foregoing paragraph I have had chiefly the common people in my eye, though all that I have said, excepting in point of size, is equally applicable to the higher classes. The chiefs of either sex, as I have already had occasion to mention with regard to the males, are, with very few exceptions, remarkably tall and corpulent. For this striking peculiarity various reasons may be suggested. Chiefs may originally have been of a superior race,—a supposition which, considering the way in which Polynesia must have been peopled, is not improbable in itself; or they may have always selected the largest women as their wives; or they may themselves have been elevated above their fellows from time to time on account of their gigantic proportions. But, in addition to any or all of these possibilities, one thing is certain, that the easy and luxurious life of a chief has had very considerable influence in the matter; he or she, as the case may be, fares sumptuously every day, or rather every hour, and takes little or no exercise, while the constant habit of being shampooed after every regular meal, and oftener if desirable or expedient, promotes circulation and digestion without superinducing either exhaustion or fatigue. Under this treatment the grandees thrive regularly, and certainly without sacrificing or endangering health; and some of them, more particularly Kuakini, otherwise known as John Adams, Governor of Hawaii; and Kekauluohi, co-regent and wife of our friend Kanaina, have become so unwieldy, that, though

otherwise in perfect health, they are yet unable to walk!

Whatever may be the cause or causes of the magnitude of the patricians, the effect itself so seldom fails to be produced, that, beyond all doubt, bulk and rank are almost indissolubly connected together in the popular mind, the great in person being, without the help of a play upon words, great also in power. Hence probably the matrimonial difficulties of poor Kanaina; and hence also the missionaries have certainly not augmented their influence by eating little but vegetables and drinking nothing but tea, till most of them are so meagre, gaunt, and sallow, as to be immediately distinguished by their looks from foreign laymen, whose religion rarely deters them from enjoying good dinners.

To pass from the appearance of the natives to their disposition. Of their domestic habits and feelings I have already said enough in an earlier subdivision of this chapter; and the less frequently that it is repeated, so much the better.

The people, in spite of all that may be inferred to the contrary from their early intercourse with foreigners, are gentle and harmless; most of the outrages, which followed the discovery, having been either prompted by revenge for past wrongs, or enjoined by the cupidity of ambitious and unprincipled chiefs. But, even if they had been wantonly and wilfully treacherous and cruel to strangers, the circumstances of their position would, to a great extent, have accounted for their atrocities; for the inhabitants of inconsiderable islands, who were constantly exposed to invasion without the means of retreat, could not fail to regard the most jealous defence

of the definite boundary, which Nature had given them, as a matter of self-preservation,—a principle which goes far to explain the peculiar ferocity of the Polynesians in particular, and of maritime savages in general. In the hands of the chiefs, this principle could at any time have excited the fury of the Hawaiians against the most friendly visitors. In fact, the habit of obedience is so powerful in the great mass of the population, that by their rulers it may be turned at will either to good or to evil; and it is partly by reason of this submissive temper, which always makes them stand by their master to the last, that they form a valuable addition to the crews of whaling-vessels.

Nor is their courage less conspicuous than their fidelity. It is, in truth, above all suspicion; and of this there cannot perhaps be a stronger proof, however indirect it may be, than the fact, that, in their wars, they seldom or never had recourse to artifice or ambuscade. They are, without exception, the most valiant of the Polynesians, being perfect heroes, for instance, in comparison with the natives of the Society Islands; so that, from the lesson lately received at Tahiti, the French may be able to form some faint notion of what an aggressor may expect from the Hawaiians, more particularly when backed by the inaccessible fastnesses of their country. In short, with their fidelity and courage combined, the Sandwich islanders, if officered like our Eastern Sepoys, would, in my opinion, make the finest soldiers of colour in the world.

But perhaps the industry of the natives is the quality which promises to be most conducive to their civilization. A habit, if not a love, of labour has been im-

planted and cherished in them by a combination of causes more or less peculiar to their condition, which chiefly, if not wholly, resolve themselves into the niggardliness of nature and the despotism of government. While many other Polynesian tribes almost realize the caricature of a copper-coloured gentleman lying on his back under the branches of the bread-fruit, and doing nothing but keep his mouth open to catch the ripe rolls as they fall, the Hawaiians, as we have already had occasion to notice more than once, are compelled by the necessities of nature to earn their food by the sweat of their brow. Witness the construction of their fish-ponds, the preparation of their *poi*, and the cultivation of their *kalo*, with all its incidental toils of digging and embanking the beds, of erecting and maintaining the aqueducts, of fixing and regulating the sluices. So far as the *kalo* and *poi* are concerned, there are some localities, Lahaina, for instance, in Mowee, in which the bread-fruit abounds, while, with a little care and attention, it might be made to grow in all parts of the group; but, whether it be that this ready-made food be here of inferior quality, or that the favourite dish of the natives has become indispensable to them, the bread-fruit is as little valued by the Sandwich islanders, as the *ka'o*, which is indigenous in many parts of Polynesia, is valued by the indolent aborigines of the more southern groups.

Nor is the despotism of government less influential in making the people work than the niggardliness of nature. Till very recently, the commoners of this archipelago, like the peasants of France before the Revolution, or of Canada before the conquest, were *taillables et corvéables à miséricorde*; or, to invent English for the exotic abo-

mination, *taxable and taskable at discretion*, while they were deterred alike from invasion and complaint by a mixture of feudal servility and superstitious terror. But, within the last year or two, certain laws, for their share in which the missionaries deserve great credit, have so far remedied this evil as to subject the amounts and times of tasking and taxing to fixed rules; and though the ascertained burdens are still too heavy and too numerous, comprising work for the immediate chief, work for the king, work for the public, rent for land and a poll-tax on both sexes, yet the restriction in question, if fairly carried into actual effect, will engender in the serf the idea of property, and inspire him at once with the hope and the desire of improving his physical condition by the application of his physical energies. Though, in many quarters of the group, an adequate motive for exertion may not at present be felt, yet, in the neighbourhood of Honolulu, the sustenance of several thousands, who are exclusively consumers, constitutes at once the proof and the recompense of the industry of the adjacent cultivators.

In fact, the demand of the town affords an ample market for the natives of the surrounding country, while there is certainly no reason for the buyers to murmur as to the amount or variety of the supply. In addition to the resources of a stationary market, which is usually well furnished with fish, meat, fruit, &c., the smaller dealers go from house to house to vend their wares; the whole scene, which is quite unique, savouring of anything but indolence on the part of the rural population. Early in the morning, a crowd of natives may be seen flocking into Honolulu, all carrying some-

thing to sell. Most of them have large calabashes, suspended in a netting, at each end of a pole, which they carry across one shoulder, the contents being all sorts of small articles, *kalo* and *poi*, and fruits and vegetables, and milk and eggs, and, what is the safest speculation of all, water fresh from the cold atmosphere of the mountains; some of them are loaded with bundles of grass for the town-fed horses; others carry a sucking-pig in their arms, while the more substantial hog-merchants make the adult grunTERS, always there as well as elsewhere, on the verge of insurrection, trudge along on their own pettitoes; others again import ducks, and fowls, and geese, and turkeys, all alive, tied by the legs to long poles, which are carried like the poles with the calabashes; while, last though not least, a few individuals, of more airy and delicate sentiments, hawk about various kinds of curiosities, such as mats, shells, scorpions, &c.; but, above all, wreaths of bright flowers, intertwined with their kindred leaves, for the beaux and belles of the metropolis.

The sleepless avarice, which here as well as elsewhere has been one of the earliest results of the contact of civilization, lends its aid, too, to strengthen and direct industry—all classes being, as is natural and excusable, ardent worshippers of money, as the one thing needful, in their opinion, for procuring all that distinguishes civilization from barbarism. Several curious instances may be mentioned. When Vancouver brought cattle from California to colonize the islands, he found that Kalaimoku's double canoe was alone capable of taking them ashore; but he found also that Kalaimoku, the highest and most enlightened councillor of

the conqueror, and hence surnamed William Pitt, would not lend his double canoe for presenting to his country a gift, which was to enrich it without pay. Again, when one of the boats of Wilkes's squadron was upset in the surf, a native promptly rescued one poor fellow who could not save himself; but, instead of striking out for the dry land, he shelved his dripping and shivering customer, on the upturned bottom of the yawl, to take his choice between promising two dollars for his life, or forthwith returning whence he came. Lastly, during our own sojourn, the American residents took a fancy to have Washington's birthday honoured by a salute from the fort; and Kekuanaoa, instead of refusing on principle or of yielding with a good grace, sold the compliment, after much higgling on both sides about terms, at the rate of half a dollar a gun. I mention these anecdotes, not to reproach any one, but merely to illustrate a characteristic feature in the disposition of partially improved savages—a disposition which necessarily springs from the fact that material civilization is more eagerly appreciated and more easily acquired than moral.

The only bad point in the native character, always excepting, of course, the besetting sin of licentiousness, is a propensity to petty thieving, with the concomitant vice of lying. But, in estimating the guilt of a savage's dishonesty, we ought to take into account the comparatively irresistible force of the temptation. To him, the rudest implements are as attractive as the most precious jewels are to a European; and I doubt much whether a vessel with diamonds all about her deck and cabin would be more sacred in the eyes of even the

most select visitors, in one of our own ports, than hatchets, and knives, and nails used to be among the savages of the South Sea. Moreover, it was with the thefts as it was with the murders; the outrages of both descriptions were less the consequence of the offender's own depravity than of his chief's commands; and, long after the pillaging of vessels was abandoned, a professional pilferer was an ordinary appendage of a chief's household, a regular hunter, in short, of all such waifs and strays as might be useful or ornamental to the establishment. But the extortion of the chiefs was alone sufficient to make their vassals thieves. Knowing neither stint nor shame, it coveted all that it saw, and appropriated all that it coveted; and, if the serfs imitated those whom they revered, they could not be otherwise than cheats and robbers. Nor had the helpless creatures, under so precarious a tenure of all the fruits of their toil, that selfish motive for honesty, which the possession of property seldom fails to inspire; and now that the limitation of the chief's rights and the vassal's duties has enabled the commoners to have something which they may really call their own, they will gradually discover that the distinction between *meum* and *tuum* is a point of law and morals in which they have a personal interest.

In addition to dishonesty, one might be led to infer, from the rigour with which the missionaries wage war against intemperance, that drunkenness was common among the Hawaiians. Now, so far as my experience has gone, the lower classes are, with very few exceptions indeed, sober even beyond the standard of clerical self-denial, drinking little but water, and rarely indulging

in the steaming beverage, "that cheers but not inebriates" their teachers. The chiefs, however, used not only to take wines to excess, but also to quaff, at a great rate, the liquor called *awa*, which nothing but aristocracy was allowed to taste. This drink was made from the root of the tea-tree, and was prepared in the following very peculiar method. In the establishment of each chief were one or two men, whose duty it was to chew the root into a pulp, which they spat out into a water-tight vessel. On this lixivium of filth and poison the operators poured water enough to extract its virtues; and, when the work of absorption was complete, the lord of the ascendant greedily swallowed an infusion, which nothing but custom could have induced even him to taste without loathing. The effects of the thing were quite worthy of the process of its manufacture. Its immediate result was a stupifying intoxication, not unlike that caused by opium; while, in its ultimate consequences, it injured the sight by rendering the eyes blood-shot, and produced on the skin a kind of leprous appearance.

CUSTOMS AND AMUSEMENTS.

The practice of shampooing, to which I have already alluded as a means of promoting circulation and digestion, is believed to be an infallible specific also for headache, and rheumatism, and other similar complaints; its medicinal influence, at least with respect to the lords of the creation, being doubtless heightened by the fact, that the shampooers are almost invariably of the weaker sex. The panacea in question, as one may easily suppose, assumes a variety of forms, inasmuch as the fair

dispenser of the dose not only knows exactly in what proportions to combine the ordinary ingredients of chafing, and squeezing, and kneading, but also, when the malady appears to be deeply seated, tries to get down to it by furrowing her customer's carcase pretty forcibly with her elbows. The native name of sham-pooing, according to the printed standard, is *tumee-tumee*; but the foreign residents, chiefly in order to tease the missionaries who disapprove of some of the modes of operation, generally express the objectionable branches of the system by changing the pronunciation of the word, as widely as possible, into *rūmee-rūmee*. The practice is undeniably beneficial to the health and development of the body. If nothing more, it is clearly an easy substitute for exercise, or rather an ingenious contrivance for shifting the toil and trouble of that essential life-preserver to another person's shoulders.

The custom has doubtless been derived from Asia, prevailing, as it does, in different parts of that continent, though not always in the form just described. Cottrell, a late traveller in Siberia, mentions his having experienced in his own person something of the same kind at Omsk, and, with one exception, at Omsk only. "By way," says he, "of digesting our luncheon, a ceremony was performed, which, if we had not undergone the ordeal in a friend's house, in the vicinity of Oranienbaum, with our lamented friend Prince Butera, would have astonished us no little. A dozen soldiers placed themselves in two files close to each other, and took up each of the party, in turn, on their arms, and tossed them in the air, catching them again on their arms, and throwing them up again, as quickly as pos-

sible, a considerable height. This operation is performed very expertly; the patient, who understands the business, keeps his arms close to his sides, and his legs stretched stiffly out, and feels no sort of inconvenience. It is exactly like being tossed in a blanket." Now, as Omsk is the frontier town towards Thibet, it may well be supposed to have borrowed its exclusive discipline in question from its southern neighbours, who again border on the countries, whence Polynesia has most probably derived its population. The difference between tossing and shampooing, in itself immaterial, affects chiefly the active instruments in the business, the one being easier than the other; and, in fact, we accordingly find that, even on the continent of Asia, the athletic exhibition of the north, as one advances to the southward, has softened itself into something like the same practice that prevails among the Sandwich Islanders.

Another remarkable custom among the Hawaiians, which, however, is not likely, I take it, to last long in these more enlightened times, is their mode, evidently Asiatic in its origin, of expressing grief for the death of a superior. The mode in question is to knock out with a mallet as many front teeth as the rank of the deceased may demand, or perhaps the mourner's remaining stock may warrant. To this most oppressive poll-tax, chiefs and commoners are all alike subject; and, accordingly, most of the chiefs of our acquaintance, including our friend Kekuanaoa himself, bore in their mouths negative marks of having, more or less extensively, paid the penalty of fashion—most, perhaps, of the vacant lots, in the case of the older chiefs,

having been intended to commemorate the death of Kamehameha. In the good old days of polygamy, the royal guardsmen had a hard time of it in this respect; for the deaths of queens, and princes, and princesses were so common as soon to disqualify the poor fellows for mourning any more, and to send them forth, as no longer fit for service, toothless into the world. Some time ago, we had one of these mutilated veterans on the Columbia, who, as if the honour fully atoned to him for the loss, used to boast of having sacrificed his teeth in the service of so renowned a conqueror as Kamehameha the Great. Sometimes, though not so often, very loyal people knocked out their eyes as well as their teeth. This part of the business, however, was occasionally managed in such a way as to compound matters between the mourner and the deceased on terms highly advantageous to the former. Kalaimoku, or William Pitt, for instance, exclaimed, on the death of his wife, that he had lost an eye, and was thenceforward distinguished as *Once Blind*—while, on the death of Kamehameha, this Hawaiian Ulysses, having discarded his other eye by means of a similar fiction, became *Twice Blind* for the rest of his life.

Besides games of chance, some of which appear to be similar to those played by the aborigines of the American continent, the Hawaiians are peculiarly fond of such recreations as require strength or dexterity. Among the recreations in question may be cited, as strikingly illustrative of physical character, the following sharp contest between the muscles of one party and the eyes of another. A fellow, whose arm is bare, holds in his closed hand a round stone, which he is to

drop and leave under some one or other of three or four small piles of shavings of wood or clippings of cloth, passing his fist from pile to pile with inconceivable quickness ; while his antagonist's business is to discover under which of all the piles the round stone has actually been hidden. Beyond the mere chance of guessing right, the latter, of course, has no other means of detecting the proceedings of the former than the movements of the muscles of the bare arm ; and hence the struggle between the muscle and the eye, the muscle running through a whole "pea and thimble rig" of feints and stratagems, and the eye striving to distinguish the true action of depositing the stone from all the deceptive varieties of motion and repose. As the man with the stone may move his hand from pile to pile as often as he likes, and actually does so with incredible ease and rapidity, he has, according to our estimate of things, all the advantages in his favour ; and yet the watchfulness of his enemy is often too much for him.

But the grand recreation of the natives is the constant habit of swimming. In fact, the Sandwich Islanders are all but amphibious, and seem to be as much at home in the water as on the land ; and, at all times of the day, men, women, and children are sporting about in the harbour, or even beyond the reef, with shoals of sharks, perhaps, as their playfellows. These voracious creatures, however, are far less likely to meddle with the aborigines than with foreigners, not that they prefer white meat to brown, but because they have been taught by experience that one Hawaiian has more of the Tartar in him than a score of Europeans.

There is scarcely an instance on record, in which a native has suffered any serious injury from a shark. If, at any time, the latter take the preliminary step of turning over on his back to get a mouthful, the former is sure at least to elude the attack by diving below the monster; while, if he has a knife or any similar weapon, he seldom fails to destroy the enemy by carrying the war into his interior.

To return to the swimming: it was part of our daily amusement to watch the rapid and elegant evolutions of the performers, more particularly of the ladies, who, in the great majority of cases, excelled their lords and masters in agility and science. Even in point of strength and endurance, one woman, a short time before our arrival, had carried off the palm from her husband. The whole story is well worth telling, as illustrative of something better than toughness of muscle or suppleness of limb.

A man and his wife, both Christians, were passengers in a schooner, which foundered at a considerable distance from the land. All the natives on board promptly took refuge in the sea; and the man in question, who had just celebrated divine service in the ill-fated vessel, called his fellows, some of them being converts as well as himself, around him to offer up another tribute of praise and supplication from the deep in which they were struggling, to tarry, with a combination of courage and humility perhaps unequalled in the world's history, in order deliberately to worship God in that universal temple, under whose restless pavement the speaker and most of his hearers were destined to find their graves. The man and his wife had each suc-

ceeded in procuring the support of a covered bucket by way of buoy ; and away they struck with the rest for Kahoolawe, finding themselves next morning alone in the ocean, after a whole afternoon and night of privation and toil. To aggravate their misfortunes, the wife's bucket went to pieces soon after daylight, so that she had to make the best of her way without assistance, or relief ; and, in the course of the afternoon, the man became too weak to proceed, till his wife, to a certain extent, restored his strength by shampooing him in the water. They had now Kahoolawe in full view, after having been about four-and-twenty hours on their dreary voyage. In spite, however, of the cheering sight, the man again fell into such a state of exhaustion, that the woman took his bucket for herself, giving him, at the same time, the hair of her head as a towing-line ; and, when even this exertion proved to be too much for him, the faithful creature, after trying in vain to rouse him to prayer, took his arms round her neck, holding them together with one hand, and making with the other for the shore. When a very trifling distance remained to be accomplished, she discovered that he was dead, and, dropping his corpse, reached the land before night, having passed over upwards of twenty-five miles, during an exposure of nearly thirty hours.

I have been thus particular in detailing this narrative of hardihood and skill, of piety and affection, because it harmonizes so exactly with my general plan of presenting, when possible, to the reader, the past and the present, the old and the new, the savage and the civilized, in one and the same view. In the skill and hardihood, we recognise the children of nature and

barbarism; in the affection and piety, the disciples of civilization and Christianity.

In Honolulu, and most probably in the other towns and villages of the group, the taste for promenading, fostered, if not created, by the introduction of civilized finery, has, to a certain extent, thrown nearly all other amusements into the shade. Every afternoon—for all work ceases about three o'clock—the main street presents a gay and pretty scene with the varieties of costume and degrees of nudity such as I have described—a scene which, unique enough in itself, is rendered still more decidedly so by the circumstance, that many of the ladies, as I have elsewhere hinted, carry about adopted sucklings in the shape of pigs and puppies, which, however, are destined to pay their little all for their board by being baked, when fat, into holiday dinners for their adoptive mammas.

In this promenading, certain days of the week take the shine out of the others. For instance, Tuesday, as everybody washes everything on Monday, brings out the belles like so many new pins, with gowns as clean, and smooth, and stiff, as starch, and irons, and soap, can make them; while the fair wearers, that all things may be of a piece, generally embrace the same occasion of mounting their fresh wreaths and garlands. For these reasons, Tuesday is a stranger's best opportunity for obtaining a full and complete view of the beauties of Honolulu, for, though never very prudish, yet they are now peculiarly ready to appreciate and return the compliment of being the observed of all observers. Saturday, again, has its own proper merit, inferior to Tuesday in show and ceremony, but superior to it in variety and

intensity of excitement. On this day, little or no work is done ; and all those who can get horses gallop about from morning till dusk in the town and neighbourhood, to the danger of such as are poor enough or unfashionable enough to walk. Saturday, in fact, is a kind of carnival, whose duty it is to atone, by anticipation, to the mass of the inhabitants for the pharisaical methodism of the missionary's sabbath. But the reader, to have a definite idea of all this walking and riding, ought to be told, that the Hawaiians, who must speak or die, never meet for any purpose, going to church, of course, excepted, without indulging, perhaps all of them at once, in a perpetual din of gossip and banter.

But the richest scene of amusement among the natives, which we witnessed, was one highly characteristic of those light-hearted creatures. A bridge and road were to be made from the town, in the direction of the valley of Nuannau. According to the law of the case, every male adult turned out to lend a hand ; even domestic servants being liable either to work or to pay,—the very labourers themselves, to say nothing of others, making this unremunerated task the groundwork of all sorts of fun and frolic. The troops mustered, as if for a review ; bands of music paraded about from morning till night ; and the women, all decked out in their best, flitted about from spot to spot, jabbering and joking all the while in their inarticulate jargon. But the statutory labour itself was perhaps the most entertaining part of the business. The men were divided into gangs of forty, each set being sure to be constantly attended by its full complement of shouting and giggling women ; and one whole gang might be seen running and laughing

with a log of wood on their shoulders, which four or five men might have conveyed with ease, evidently succeeding to their own perfect satisfaction in converting the toil into a pleasure. Every day used to close with quite enough of dancing and singing; but this day of hard duty ushered in an evening of more than ordinary festivity.

I have taken no notice of the native dances, for most, if not all, of them are unfit to be noticed. They have undergone very little change for the better since the days of the early visitors; and, if they have been rendered less public through missionary zeal, they are unfortunately so much the less likely to be influenced by the gradual formation of that popular opinion, by which alone they can be abolished or improved.

The last particular which I shall mention under this head, is one in which, at least in Honolulu, every stranger, whether willing or unwilling, is obliged to take the principal share. On his first arrival, the visitor is followed through the streets by a crowd of men, women, and children, who, without incommoding him by actual pressure, are always ready to assist him in any and every possible way, to pick up, for instance, whatever he may drop, or to open gates, or to point out the lions, or to explain all that may require explanation. Meanwhile, he cannot help suspecting, that his self-elected satellites are taking their hire out of him by quizzing any little peculiarities that he may possess; for he hears behind him volley after volley of laughter, each one evidently produced by some excellent joke that has preceded it. As nobody likes to be laughed at, especially when he cannot enjoy the jest himself, the

victim resolves to escape from his tormentors by wearing out their patience the next time that he calls at any house; but, let him stay as long as he likes, or till he is ashamed to stay any longer, he finds his volunteers where he may have left them, waiting to greet his return with a cheerful welcome, and to repeat their kindly-meant persecution. If he has a single drop of the milk of human kindness in his own composition, he now, of course, submits to the infliction with a good grace.

CHAPTER XII.

SANDWICH ISLANDS.

Navy — Army — Revenue — Government—Religion—Education—
Productions and Manufactures—Trade.

In regarding the Hawaiians not as individuals, but as a community, I shall, to confine myself at present to the most general distinctions, begin with government and its incidents, then pass to education and religion, and lastly conclude with trade and all that concerns it.

NAVY.

Before the days of Kamehameha, the only vessels of war were canoes, such as are still in use for most purposes. These canoes, which are all, of course, seagoing craft, convince one at the first glance that the natives must be tolerably amphibious animals. They are usually hollowed out of the trunk of a cocoa-nut tree, and are generally so narrow as barely to allow a man to sit in them on his knees. This rickety machine is kept in an upright position only by the contrivance of an outrigger, consisting of two pieces of wood of about ten feet in length attached at right angles to one side of the canoe, and joined at their outer extremities by another piece of wood, which is, of course, parallel with the body of the vessel; and this appendage, while it gives security

by virtually increasing the breadth of beam, does not sensibly impede the little bark's motion through the water. But, outrigger and all, these ticklish skiffs not unfrequently get capsized at sea; but, on such occasions, the crew, who, of course, must have been pitched clean out, soon set all to rights and start again, though generally with the loss of some of their goods and chattels. The savages, however, did not fail to discover that union was strength; for, by lashing together two such vessels as have been just described, they produced a *tertium quid* of twenty times their value.

These double canoes, formerly employed in war, and still used by the chiefs, are capital sea-boats, Kamehameha having at one time contemplated the conquest of Tahiti in reliance on a fleet consisting chiefly of them; and it was probably in some such galleys that the Tahitians first made their way, in days of yore, to colonize the Hawaiian group. In speed, as well as in security, the double canoes are vastly superior to the single. On a mast planted between their two parts, they carry a large sail of triangular form, which may either assist or relieve the paddles; and, as they are made of the largest trees, which are reserved for the purpose, they sometimes accommodate eighty or a hundred men each, while every man, seated as he is, in comparative ease and safety, can put forth all his attention and energy on his work.

After the discovery, canoes were gradually supplanted for all great objects by ships, which were procured sometimes by foul means, and sometimes by fair dealing, till at last the subjugation of the whole archipelago under one ruler entirely superseded the use of the

smaller description of national craft. Thenceforward, the navy consisted of decked vessels; and, though now less powerful than it has been, yet it still musters a few armed schooners of from twenty to a hundred tons, which, manned and commanded almost entirely by native seamen, are politically valuable in holding the remoter dependencies to their allegiance, to say nothing of their commercial utility in carrying provisions and passengers from one island to another.

As a beginning of civilization, this navy, however insignificant in modern eyes, is certainly superior to the squadron with which Columbus discovered America, and perhaps not inferior to that with which Drake left England to circumnavigate the globe; and, to come even to the present day, it is infinitely creditable to the Hawaiians, when compared with our own experience of the "one and indivisible" navy of California, built by foreigners, commanded, and partly manned by foreigners; and, to crown all, confined to port till victualled by foreigners.

ARMY.

Even previously to the days of the discovery, the Hawaiians appear to have possessed a better notion of military affairs than savage tribes in general possess. They marshalled themselves in something like regular lines and columns; they marched under the distinctive banners, more or less splendid according to the rank of the parties, of their respective chiefs; and, generally disdaining, as I have already mentioned, the use of snares and ambuscades, they, of course, delighted chiefly in the pitched battle with its "clear field and no favour."

Besides swords, clubs, bows, &c., which they had in common with other savages, they were peculiarly expert in the hurling of the spear, and miraculously so in the avoiding of it, when hurled against themselves. To this practice they were systematically trained; and even now, after peace has continued nearly fifty years, and civilization has substituted its own weapons for those of barbarism, the officers of the fort, who were always happy to entertain us with specimens of their native warfare, perfectly astonished us with their dexterity in the management of the spear.

One stood to be aimed at, while several others, at a distance of about twenty paces, rapidly darted against him the long spears of ancient times with such vigour and certainty, that their comrade, who acted as their common butt, could be saved by nothing but his own coolness and agility. But he was apparently as much at his ease as if he had been Gulliver among the Lilliputians; some of the weapons he would send flying off at an angle by touching them with his shoulder, or leg, or arm; others he would catch by the middle and hurl back at the throwers, thus directly turning the tables on the enemy; one or two he might, perhaps, clutch between his arm and side; and, at all events, even when a special display of skill was impracticable, he would still dodge the mischief by a slight inclination of his body. In this apparently dangerous pastime, Kamehameha was rather fond of exposing his royal person; and, when urged to be more careful of his valuable life, he replied, that it was as easy for him to avoid the spears as it was for his antagonists to throw them.

The substitution of civilized arms and discipline,

though gradual, has yet been complete, excepting that one whole age of tranquillity, more particularly as it happily promises to be succeeded by another age of the same blessing, has, to a certain extent, degraded soldiering into a burlesque. Witness the training at the fort, which we sometimes attended, apparently to the great gratification of the chiefs. The officers, for the most part, were well dressed, some even making an attempt at uniform; but the men, in clothes, in accoutrements, in arms, in every thing, did certainly baffle all classification. Tall fellows and short were ranked and filed together with admirable perverseness; every one was dressed, or not dressed, according to the state of his wardrobe, or the whim of his fancy; some shouldered broken muskets, and others wooden guns; some again had only sticks, and others nothing at all. Still, however, all of them went through their exercise with much precision, marching in excellent time to the sound of their drums and fifes.

But the richest part of the treat was the Hawaiian English, in which the word of command was given. At first, we could make nothing of our corrupted vernacular; but, at last, happening one morning to stand near the captain of a number of wooden guns, a handsome fellow, by the by, with a gold-laced cap, a handkerchief round his waist, and a cane, we were fortunate enough to catch the sounds as they escaped, all tortured and dislocated, from his lips. *A-a-tee-un!* shouted the officer; and clap went all the hands, while the motley fellows drew themselves up, as one man, into the attitude of *attention*. *Cheear-a-ar!* the first division of the sound being almost inaudible, and the second bear-

ing away all the emphasis: and the men accordingly shouldered their not very heavy firelocks. *Petec-a-or!* came next in order, and each warrior presented the same harmless engine which he had just previously shouldered. *Pee-ba-a-tee!* crowned the climax; and the men, after drawing imaginary bayonets with as much solemnity as if they had been mesmerizing their hips, fixed the same with such an air of business about them, as entirely overthrew our gravity.

But, however ridiculous most of the details were, the impression on the whole was favourable, as often as we attended. The men, as a body, were strapping fellows, with that best of all uniforms, good looks and fine figures; and, as to any other uniform, the day of trial, when it comes, will find them, I take it, doing their duty, and doing it well too, in their brown skins and their *malos*.

These troops are merely militiamen, who, in consideration of being thus drilled two or three times a week, are exempted from all other public labour; they are, I apprehend, part of a general corps of national defenders. But, in Honolulu, the government has at command a more regular and permanent force, organized and trained to discharge the duties of a municipal police. To this body much credit is due for the order and regularity preserved in the town. Its services in this matter are but seldom invoked during the day; but, in the night, its measures are of the most prompt and summary character, for every native who is found in the streets after one of the guns of the fort has told the lieges that it is half-past eight is clapped into durance vile without ceremony, and fined next morning.

But the force in question is not less valuable in maintaining the discipline of the vessels in the harbour than in securing the peace of the town. It cannot, indeed, prevent the temporary evils of drunkenness and dissipation ; but it does effectually protect the ship against the worst misfortune that can befall her in port, by such a vigilance in recovering deserters, as is but seldom evinced on more civilized stations.

In Honolulu, the militia and the police, taken together, amount to about six hundred men.

The fort, properly so called, is merely a large quadrangular building, surrounded by low stone walls. It mounts a considerable number of guns ; and when the salute, which I have already mentioned, was sold and delivered on Washington's birthday, one of the guns, which had been shotted for the purpose by order of the sagacious old Governor, sent its ball beyond the reef, as a warning to all whom it might concern. In fact, the fort, as I have already mentioned, must be silenced by an enemy from the outer anchorage ; for otherwise, a hostile vessel, while towing, in a helpless condition, into the chops of the harbour, would expose herself to a heavy fire, which she could not return. Besides the fort in question, a battery which has seen better days, and still shows a few rusty cannons, commands the town from a hill immediately behind it. This battery is said to have under its immediate protection one of those reserves of dollars, which the government is popularly supposed to keep *en cache* in various parts of the country. In my opinion, the battery is just as likely to be manned against an intruder by Kamehameha's ghost ; and probably the incredible fable never had any other

foundation than the jealous custom, given up, however, of late, of not allowing any person to visit the stronghold without being attended by a soldier.

REVENUE.

His Hawaiian majesty's ways and means are drawn from various sources and in various shapes, from every possible source, in fact, and in every possible shape; and the details, however unimportant in their direct bearing on the resources of the government, are peculiarly worthy of consideration, as illustrative of the condition of the people.

A poll-tax is levied on all and sundry, excepting old people, and children under fourteen years of age, being at the rate of a dollar for a man, of half a dollar for a woman, of a quarter of a dollar for a boy, and of the eighth of a dollar for a girl. Supposing the tables which have been already quoted to present the average proportion of ages and sexes in the whole population of eighty-eight thousand, this branch of revenue would, on a rough estimation, considerably exceed forty thousand dollars.

But an additional poll-tax, in the form of labour, is exacted from all male adults. Every man is bound, if required, to devote to public works six days in every month of four weeks, being precisely one fourth part of his whole time. From this liability even domestic servants are not exempted. They must either leave their duties for the time, or pay half a dollar for each day's default. Of this system the white residents could have but little reason to complain, if they enjoyed a legal right of compounding for the year's burden; but they

possess no such privilege, being subject, on each and every occasion, to the caprice of the authorities as to the pecuniary composition for such indispensable attendants as they may be graciously permitted to keep at home: moreover, this poll-tax, with an ingenuity worthy of civilized financiers, is levied on the absent, and even on the dead, no Kanaka being allowed to go abroad till his employer has paid an equivalent for the statutory labour likely to be lost to the community during the whole term of his engagement. Reckoning the male adults at twenty-eight thousand, this poll-tax is, of course, equivalent to the labour of seven thousand able-bodied men for a whole year; or, if turned into money at the rate of composition mentioned in the following paragraph, it must amount to two hundred and fifty-two thousand dollars.

After all this fleecing, the poor creatures have earned a claim to nothing more than air and light. The land they must not meddle with, though the surface capable of cultivation, even if estimated at only a sixth part of the whole, contains at least twenty acres for every male adult in the group. They have to pay not only for the ground that they till, but even for the privilege of tilling it; or, in other words, they are themselves saddled with a third poll-tax, as cultivators of the soil, while their possessions, in proportion to extent, are assessed to a land-tax of apparently exorbitant amount. The poll-tax in question is precisely another fourth part of their whole time, being three days in the month for the immediate proprietor, whether the king or a chief, and three days in the month for his majesty, as lord paramount; and this fourth part, though such is not the

case with the other, may be commuted at the tenant's option into the sum of nine dollars. This poll-tax, therefore, cannot, as a whole, be reckoned at less than two hundred thousand dollars, while the king's share of the same, even supposing him not to be an immediate proprietor at all, is exactly one half of the amount.

The land-tax, again, is payable in hogs of different lengths. If the patch be large—the largest not being bigger than an ordinary garden—the animal must measure a fathom; if it be small, he is let off for a yard; and, if it be neither small nor large, he must hit the golden mean of three cubits. But, as the length alone of a hog, to say nothing of the brute's trick of stretching himself to serve his friend, is as vague a criterion of merit as the length alone is of a sermon, weight has been practically substituted for measurement at the rate of a thousand pounds to three fathoms; and then, again, to provide for the possibility of there being no hog fat enough on the premises, the pork is valued at three cents a pound, so as to make ten, five, and seven and a half dollars, the respective equivalents of the three lengths or weights of grunter. Taking the cultivators, in round numbers, at twenty thousand, and supposing one and all of them to deal only in small patches and yard hogs, the treasury must receive either about twelve miles of pork, or precisely a lac of dollars, or something between the two.

Of that portion of the royal revenue, or at least of the king's income, which arises from his majesty's lands, I am unable to ascertain or even to guess the amount. The lands in question appear to be partly private property and partly public domain, though the distinction,

I dare say, is, in practice, almost entirely nominal. In the public domain, comprising all the lands that do not belong to individual owners, the king possesses a source of revenue which is susceptible of indefinite improvement and extension. Already he derives an income from the progeny of the cattle left by Vancouver, which, besides being originally the property of Kamehameha, have long since been driven to the mountains, on account of their wildness and ferocity; and as their numbers are constantly increasing, while the demand for them promises to increase in the same proportion, they will ultimately yield a very profitable return for the wildernesses which they occupy.

But it is by encouraging the immigration of foreign settlers that his majesty must turn the best parts of his public domain to advantageous account; and all that is required by way of such encouragement is a liberal and judicious system of leasing the soil, for the purposes of extensive cultivation. But, unfortunately, such a system was long unpalatable alike to Church and State. The chiefs looked with jealousy on the whites, as being likely at no distant day to supplant themselves; and the missionaries, besides being secular enough in their aspirations to cherish the supremacy of the chiefs as an indispensable aid in the work of converting the natives, regarded white laymen in general, and with some reason, too, founded on experience, as scoffers of much of what they themselves deem morality and religion.

To return to the subject: we have seen that the written laws, intended, as they are, to mitigate the indefinite exactions of former times, deprive the natives, to speak generally, of one half of his time and of at

least six dollars a year in money, or in money's worth ; that they tax his existence ; that they tax his labour ; that they tax his property. But, as if all this was less than enough, the laws in question have taxed some of his actions, which are just as natural to him, and as innocent in his estimation, as eating and sleeping.

The conduct of the king and chiefs in this matter ought not much to surprise us, inasmuch as, under the old system of taboo, they used to impose all sorts of arbitrary and absurd prohibitions for the comparatively unprofitable pleasure of sacrificing the offenders to the gods. But the missionaries ought to have known better.

To resume the fiscal view of the subject, this taxation of sins has this bad effect, that, in more ways than one, it brings the administration of justice into merited suspicion. As detection is a mere accident, where concealment is so easy, the punishment of offences, which nobody hesitates to commit for their own sake, hardly establishes any greater certainty of guilt than impunity itself ; and, as the treasury shares the proceeds with the informer, in the proportions of seventy-five and twenty-five per cent., prosecutors and judges are strongly suspected of a predisposition to make the most of a case, without any very scrupulous regard to law, or justice, or common sense.

In illustration of this determination to get money by some means or other, many anecdotes have found a place in my journal, which, however incredible in their details, serve to show what is in itself a great evil, the general want of confidence in the working of this lucrative jurisprudence.

A cobbler and his wife quarrelled with a tailor and his wife; from looks they came to words, and from words to blows, and then—what proved to be the worst part of the business for them all—they came to the governor, to try the grand cause of tailor *versus* cobbler. The plaintiff having failed to make out his charge against the defendant, his excellency, after stating that, if the tailor had established his case, the cobbler would have had to pay sixty dollars, consoled himself for the disappointment by fining all the parties, saving and excepting the plaintiff's wife, twenty dollars each.

Again: a foreign resident had a nocturnal round at fisticuffs with a Kanaka, who was too tipsy to be satisfied with his own share of the road. Two days afterwards, all the parties were summoned before the authorities, who, after a patient and thorough investigation of merits and demerits, fined the combatants six dollars each for the respective assaults, levying also on the Kanaka two other similar sums for being drunk, and for disturbing the neighbourhood; while, still farther to help the good cause, they exacted ten dollars from each of the four witnesses, very justly observing that, if they had been quiet and dutiful subjects, they would not have been in the streets at midnight.

To conclude: the annual proceeds of this branch of the royal revenue are estimated at five thousand dollars for Woahoo alone—the most productive, however, of the islands in this respect, inasmuch as it contains a larger proportion of whites, who are liable to this “poll-tax” in common with the aborigines.

In addition to these taxes, which fall almost ex-

clusively on natives, there are still others, which, generally speaking, fall, at least primarily, on foreigners.

Certain occupations cannot be pursued without a license, which, of course, costs money. A store, which sells only by wholesale or by retail, pays twenty-five dollars, while, if it sell in both ways, it must pay fifty; a victualling house is charged the same as a retail or wholesale store, while a house of entertainment is rated at forty dollars. Neither the house of entertainment nor the victualling house is permitted to deal in spirits—a point of policy, by the by, in which the Hawaiians have been rather too much for the French. When Captain La Place came to coerce the native government into the toleration of Catholicism, he found that, through the influence of the missionaries, wines and spirits, the staple productions of France, were prohibited. Partly to promote the commerce of his country, and partly perhaps to be revenged on the zealots to whom he ascribed the persecution of his religion, the officer in question successfully negociated, at the cannon's mouth, for the admission of French wines and brandies at a duty not exceeding five per cent.; but, as he neglected to provide for consumption as well as for importation, as he certainly would have done in the event of his having thought of the precaution, he left, after all, the better half of a drawn battle in the hands of the enemy.

The harbour dues of Honolulu must also yield a considerable sum, being six cents a ton on every vessel that may touch for refreshments, and sixty on every vessel that may enter with a cargo. The distinction, though in the proportion of ten to one, is not unreasonable in

itself; but it is said to be an instrument of partiality and oppression in the hands of the harbour-master. As a mere visitor is allowed to land goods to pay for his supplies, without thereby becoming liable for the heavier rate, the harbour-master clearly has the power, if he has the inclination, to favour one by permitting him to land too much, and to harass another by preventing him from landing enough; and, being an American, Reynolds is shrewdly suspected by the British of being influenced in this matter by national predilections and antipathies. Either the office should be filled by a native, or the dues should be more equitably adjusted with reference to all the possible variety of circumstances.

Last, though not least, comes the import duty. This tax, under the existing state of the foreign relations of the group, cannot exceed five per cent., *ad valorem*, France having established this rate with respect to all its merchandize in general, as well as with respect to its wines and brandies in particular, and England and America being entitled to the same indulgence as the most favoured nations. In point of fact, however, it is only three per cent.;—a rate at which, moderate as it is, this branch of the revenues cannot be less than 8,000 or 10,000 dollars.

To close this subdivision of the chapter, all these taxes, with the exception of such as are levied on foreigners, do not directly yield much cash to the government. Where the sum stated is of the nature of a penalty, it is taken out, in default of payment, in the shape of imprisonment, with hard labour; but, when it is not of the nature of a penalty, it is accepted in all

sorts of produce, such as cloth, cotton, arrow-root, sugar, &c.,—the whole, however, being easily convertible either into money or into imported commodities.

The king's personal share, or what may be styled the civil list, is said to amount to about £3,000 sterling. Before anything got his length, many others doubtless helped themselves with unscrupulous liberality. Now, however, a better system prevails, Dr. Judd of the missionary body having been appointed, since my departure, and in consequence, I may say, of my suggestions, treasurer-general, with sufficient powers to regulate and control the proceedings of all the subordinate receivers of the public money.

GOVERNMENT.

Previously to the conquests of Kamehameha, the government of each island was almost entirely aristocratic, the nominal monarch being little more than the first among equals. Gradually, however, Kamehameha broke the power and abridged the privileges of the chiefs, rendering them, moreover, dependent on his will for such privileges and power as he still left them; and, though he was too politic a prince to abuse his prerogatives, yet he so effectually consolidated his despotism, that his immediate successor, however inferior in personal character, was able to maintain the same position with respect to the oligarchs as the conqueror himself had occupied. In one particular of vital importance, Liho Liho extended the rights of superiority which he had inherited from his father: I allude to his having enacted, without any attempt at resistance on the part of the individuals interested, that the lands of the chiefs,

instead of being hereditary, as, to a certain extent, they had been, should revert to the crown, as fiefs for life, on the death of the respective proprietors. During the minority of the present sovereign, Liho Liho's immediate successor, the chiefs did their best to recover and perpetuate their rights by repealing Liho Liho's enactment aforesaid, and declaring their lands to be exempted, unless in case of treason, from everything like forfeiture or reversion.

Of the condition of the great mass of the people, during all these changes, I have already incidentally said enough under various heads; and I need not here say anything more than this, that they had not even a notion of legal right, while most of their oppressors had little or no sense of moral obligation.

Recently, however, the political relations of the three parties, king, chiefs, and people, have undergone material and important changes. A constitution has been promulgated by which the people are not only admitted to a share in the work of legislation, but also in this respect appear to be placed on the same level as the inferior grades of the aristocracy. In addition to his majesty,—who has a negative on all the proceedings,—and to a house of nobles,—which consists of fifteen nominees of the crown,—the Hawaiian Parliament possesses also its representative body, which contains seven deputies, chosen without any qualification, or rank, or fortune on their own parts, by universal suffrage.

Whether the deputies are subject to any restriction as to sex, I cannot gather from the terms of *Magna Charta*; but, among the nobles, at least there are almost

as many ladies as gentlemen—nearly half of the conclave, to make the anomaly still more anomalous, being married couples, namely, our friends Kealiahonna, Paki, and Kanaina, with their better halves. From this constitution, the oligarchy, as such, has clearly received its death-blow, more particularly as the fifteen grandees, with their twelve separate possibilities of issue, muster among them only eleven olive branches to succeed them, of which at least six, a majority of the whole, belong to the overshadowing tree of the Kamehamehas.

Nor are the laws which have flowed from the constitution less fatal to the oligarchs in their spirit of impartiality than the constitution itself,—a high chief having been hanged a short time before our arrival, for the once venial crime of poisoning his wife. The radical reform in question has confessedly been effected by a concurrence of two very different causes, the extension of foreign commerce, and the progress of native education. Trained under the exclusive control of Protestant republicans, the young men and women of all classes could not fail to lose their hereditary reverence for arbitrary distinctions, which were as incompatible with the light of the gospel as they were repugnant to the spirit of freedom; while the chiefs were constrained to cherish the very system that was thus undermining their caste, by a conviction that nothing but the enlightening and elevating of the people could prevent themselves from being overwhelmed by the gradually swelling tide of the foreign population.

The descent of the crown is worthy of a passing remark, as throwing light on some of the national pecu-

liarities. In consequence of the general dissoluteness of manners, the question of paternity was always more or less problematical; and the mother was the only parent with respect to whom even the wisest child had any certain knowledge. Hence all the great ones of the group, and probably, in imitation of them, the small ones too, used to marry as many of their own sisters as possible, in order to make sure at least of collateral descendants. Thus, Liho Liho married three of his sisters, while Kaui Keaonli, the reigning sovereign, had a fourth sister as his first wife. Subsequently to her death, his majesty could no longer follow suit, for his only surviving sisters, two of Liho Liho's dowagers, had, besides being too mature in years for his fancy, respectively espoused Kekuanaoa and Kanaina.

On the part of the king, therefore, the chances of genuine offspring were considerably diminished; and, as both the princesses had issue of undoubted authenticity, the hopes of the nation were turned towards the children of Kinau, as the rightful successors of all the Kamehamehas. Accordingly, Kekuanaoa's third son was formally recognised as heir presumptive of the throne, while his first and second sons were definitively appointed as the future governors, respectively, of Kaui and Mowee. Kaui Keaonli, however, brought all this arrangement into jeopardy by taking to himself a second consort in the person of a daughter of Captain Jack, the admiral of the group; but, as Captain Jack was a chief only of the third grade, her inferiority of rank, for the German doctrine of equal marriages was indigenous among the Hawaiians, concurred with the

possibilities of a matrimonial mistake in strengthening the interest of the female line. Still, in the absence of positive law to the contrary, Kaluma's progeny ought to inherit the kingdom; but unfortunately both her young ones have, by sudden and premature deaths, left a clear field for the pure blood of the Kekuanaoas.

But the rules of succession are probably destined to be of little importance. Though Kauī Keaouli, now that his strict temperance gives full play to his naturally excellent sense, may hold the sceptre of Kamehameha to the end of his days, yet his successors are not likely long to retain in their hands the actual powers of government. To say nothing at present of foreign states, the whites and the half-breeds—two classes which are each becoming more and more numerous and powerful every day—will not always submit to native rulers. On the ground that the general laws, which may suit the native population, are not adapted to their own condition, they will demand, as they have, in effect, already demanded, particular laws for themselves, with a voice in making the same. When they have got an inch, they will take an ell, till at last they will become the legislators of the archipelago, and that, in all probability, through the letter of the very constitution, which has been framed, as we have just seen, to neutralize and check their influence. Under that instrument, nearly all authority is vested, either directly or indirectly, in the king; and he is the very individual in the group who has the greatest interest in keeping the foreigners in good humour, as being those from whom he derives the most productive portions of his revenue.

His majesty might thus be induced to carry into effect the measures of the whites and half-breeds, till finally he should become a puppet in their hands, a kind of Great Mogul in miniature. He might even arm them with the means of carrying their measures for themselves. He might call some of them into his council of patricians, as he has, in fact, abroad called one half-breed, son and namesake of the John Young, whom his father before him elevated to be a high chief; or he might serve their purpose with still greater ease and certainty by appointing one of them to the standing office of premier, or co-regent, of the kingdom. Without affecting to put forth these details as predictions, some such general result must soon be realized — always, of course, in default of the previous intervention of some one or other of the maritime powers.

The chances of such intervention are now less than they have hitherto been. The Russians are said to have once had an eye on the Sandwich Islands, having exhibited some sinister movements in Kauai, and having proposed to lease the uplands of Mowee for the growing of wheat; but, besides that, they have never interfered in a national capacity; they are now so little suspected in the matter, that they have not even been requested, as England, France, and America have been, to recognise the independence of the group. Again, the three powers last mentioned, by acknowledging the entire and absolute sovereignty of the Hawaiian Government, have not only disclaimed for themselves, but have virtually taken upon them to disclaim for all other states, all right and intention of appropriating the

group, as if unoccupied territory, under the public law of the civilized world.

In fact, under the guarantee of America, France, and England, the Sandwich Islands are secured as effectually as any other community against foreign interference, excepting that, from their position and the inexperience of their rulers, they are peculiarly liable to come into collision with the very powers that have guaranteed their independence. Their position alone with respect to the trading interests of England and America will render neutrality extremely difficult, if not altogether impossible, in the melancholy event of a war between those kindred states; while any infringement of the law of nations in this respect will be sure to lead to the occupation of the group on the part of England, either as the avenger of her own wrongs, or as a protector against the vengeance of America. But, unlike this occasional danger, the inexperience of their rulers is a rock on which they may be dashed at any time with fatal effect; and, within these few short years, the cause in question has placed the native government at the mercy both of France and of England.

But, so far as this latter evil is concerned, territorial seizure, at least till all other means of redress have failed, appears to be prohibited by the spirit, if not the letter, of the guarantee of independence. The three Powers gave up very different claims. France surrendered nothing but her thirst for all kinds and degrees of glory: America had acquired something like an equitable title by her instrumentality in bringing the archipelago within the pale of civilization and Christianity; and England, to say nothing of an unvarying

course of kindness and generosity, enjoyed all the legal rights, that could be based on a complete discovery and on repeated cessions. The sacrifices having been so unequal, a territorial seizure, which could at all be avoided, would be a fraud on England and America, if perpetrated by France, while, if perpetrated by America, it would be a fraud on England.

Even if France should effect a justifiable seizure, a seizure rendered inevitable at the moment by the obstinacy or poverty of the native authorities, America and England would be entitled to make her relinquish her prey, on giving security for adequate satisfaction. To hand over the Hawaiian archipelago to a people of a different spirit and a different tongue would in them be treason against their kindred races, that have redeemed the islands from barbarism by the arts of peace,—treason against their common language, that is training the natives to a bloodless fraternization,—treason against the great cause of human improvement, which is to find in that common language the clearest light, and in those kindred races the best instructors. But of such co-operation the incidental effects would be infinitely more valuable than the mere deliverance of a few Polynesian Isles from the clutches of an unscrupulous oppressor. It would recognise the fact, that Great Britain and the United States are still linked together by every possible tie, excepting only the bond of a common government; while it would, at least on neutral ground, merge the political asperities of this single distinction in the consciousness that, on the map of the world which Providence is visibly sketching, the American Union and the British dominions are only incomplete parts of that English

empire which, already the greatest on earth, is ultimately to embrace half the globe.

As I was myself a party to the negotiation, which resulted in England's recognition of the independence of the group, I might appear to have a personal interest in defending the policy of that measure, had not Lord Palmerston's previous disclaimer of British sovereignty left little but a matter of form to be settled between Lord Aberdeen, on the one hand, and the Hawaiian Envoys and myself, on the other. But, even before Lord Palmerston offered the disclaimer in question, what was the actual position of our country with respect to the native authorities, as distinguished from the rival powers of the civilized world? Though against the latter the claim of England was conclusive and complete, yet, in regard to the former, it amounted to nothing more than the barren right of feudal superiority.

Considering that, in the days of Cook, the Sandwich Islands were just about as populous, in proportion to extent, as Wales or Scotland, they could not, on any principles of law or of reason, have been appropriated, as unoccupied territory, for the purposes of colonization, more particularly as the aborigines lived, at least as exclusively as either the Scotch or the Welsh, on what they extracted from the soil by the sweat of their brows. But the rights of discovery, whatever they were, were clearly abandoned with respect to the natives by Vancouver's acceptance of Kamehameha's cession of the sovereignty of Hawaii,—an acceptance which the British Government of the day never disavowed; while the new title, for which the old one was thus bartered, was itself inconsistent, as was also its subse-

quent confirmation on the part of Liho Liho, with any thing like direct interference in the internal polity of the group.

If England had taken the offers of the conqueror and his son, according to their well understood significations, she could have assumed only the protectorate of the archipelago,—an office which, at least according to French experience and perhaps in the very nature of things, would have embroiled her, to say nothing of the jealousy of foreign rivals, with the very savages whom she professed to protect. If she had actually established the indirect dominion in question, she would, in all probability, have soon been justified by some violation or other of her rights in grasping the immediate sovereignty; but, as she had not chosen to establish anything of the kind, she stood on the same footing as France, or America, or Holland, or Denmark, with respect to the natives, in any attempt at annexing the islands to her colonial empire. Such annexation, unless it rested on the plainest justice and the strongest necessity, could not, on the whole, be advantageous to the mistress of so many widely scattered dependencies, held, for the most part, in cheap and willing subjection by their faith in her moderation and integrity. It might, indeed, promote the welfare of the great mass of the people; while, even to the dominant caste, it could be rendered palatable by a comparatively trifling amount of annuities, which, in most cases, would be limited by Nature herself to the lives of the first recipients. It is only on this disinterested ground and in this honourable way, that England can ever think of possessing the Hawaiian archipelago, however

tempting may be its agricultural, or commercial, or political, attractions.

England, however, has duties to discharge towards her children, who have settled, or may hereafter settle, in the group, over and above the obvious obligation of watching over the interests of her shipping. Her cheapest and least offensive, and perhaps also her most efficient, mode of doing all that she ought to do in the premises, is to be particularly careful and cautious in the selection of her resident representative. The British consul, if he be unexceptionable in manner and temper, in judgment and knowledge,—if, in a word, he know how to unite the gentle in tone with the firm in action,—cannot fail to be in himself a host against all the caprices and intrigues that are likely to challenge his interposition. Such a man, simply by doing nothing to lower the dignity of his country, would, in general, be treated as if he had her resistless power at his back; while, in order to keep up the national *prestige*, the visits of ships of war, hitherto “few and far between,” might easily be so regulated as always to hang over the heads of all whom it might concern,—surely as patriotic, if not so profitable, an occupation for Her Majesty’s squadron as the freighting of silver from San Blas, or Callao.

The functions of the British Consul, which have not always been judiciously discharged by Mr. Charlton, are the more difficult and delicate, inasmuch as the native authorities, as already shown to exist under the written constitution, are known to be a good deal under the irresponsible influence of American advisers. Soon after their arrival from Boston, the missionaries noto-

riously became, so far at least as new legislation was concerned, the real rulers of the group. For many years, they attempted, hopelessly enough, to shroud their political supremacy under a very transparent veil of special pleading, partly because most of their innovations were offensive to nearly all the foreign residents, and partly because their whole proceedings not only set at defiance their special instructions against meddling with affairs of state, but also evaded the fundamental rule of their craft, that Christianity ought, in order of time, to take precedence of civilization. At length, however, the Rev. Mr. Richards happily modified this system of indirect domination, by resigning his position as a missionary, and standing forth as the avowed counsellor of the Hawaiian government.

The example of Mr. Richards was imitated, immediately after my departure, by Dr. Judd, who undertook the offices of treasurer and recorder, the latter department having been subsequently resigned in favour of an American lawyer, of the name of Ricord. Of the upright intentions and disinterested motives of Dr. Judd and Mr. Richards, I am able, from my own personal knowledge, to speak in high terms. Still, the fact that all the three are Americans must excite the jealousy and suspicion of British subjects in general, and must exercise all the prudence and caution of the British Consul in particular.

Mr. Ricord's office, I apprehend, is likely to be a peculiarly fertile source of misunderstanding. Under the native code, all causes between foreigners were tried by foreigners, who necessarily acted in the double capacity of judges and jurors, making their own law in each

case for the facts, according to their own notions of right and wrong. Things went on pretty well, excepting that, when the parties were of different nations, each was ready to impute to the other's countrymen a disposition to evince their patriotism at his expense; but now that Mr. Ricord, as president of the court, will have all the law to himself, he will, of course, be suspected, however innocent he may be, of throwing his weight, as often as only one party is an American, into the scale of his compatriot. The extent and intensity of this cause of discord will be better appreciated by the reader, when I come to speak of the social and mercantile factions of Honolulu.

RELIGION.

The ancient superstition was as unmeaning as it was bloodthirsty. Whatever was its origin, it had practically degenerated into a mere instrument of the oppressive policy of the privileged class. The absurd and arbitrary taboos, which were venerated as the oracles of the gods, had, in effect, no other general end in view than that of schooling the bodies and souls of the people into an unfaltering course of passive obedience; while their particular object, in most cases, was to entrap obnoxious individuals as victims for the altar, by watching their minutest violations or evasions of impracticable prohibitions. In all probability, however, the pretended organs of the Hawaiian Molochs, at least down to the days of the discovery, were the dupes of their own imposture.

But, subsequently to the discovery, the foundations of the system were gradually shaken. Whites were

seen defying the taboos with impunity ; the natives, who went abroad, and were known to do at Rome as Rome did, returned, notwithstanding their impiety, rigged out in such a style as to have passed, in unsophisticated times, for divinities themselves ; and many of all grades, even while they remained at home, began to find out that, so long as the priests could be kept out of the secret, the gods took no interest whatever in what they said, or in what they did. Under these circumstances, idolatry had no longer anything but custom to support it ; but then this single prop rested on the shoulders of an Atlas. Kamehameha resolved to die in the faith in which he had lived, disdaining to desert in his old age the mythology that had crowned his youth with victory. For this feeling, whether it was gratitude or prudence, he was doubtless peculiarly indebted to a remarkable incident, which he could not fail to consider as a conclusive proof of Divine protection. While he was still struggling for the mastery of Hawaii, the enemy were advancing against him through the fiery domain of Pele, whom more enlightened tribes might have been excused for worshipping ; when, amid the shocks of an earthquake and the eruptions of the volcano, one whole division, mustering about four hundred souls, died in marching order, having been instantaneously suffocated by a current of vapour, which left the other divisions unscathed. This catastrophe was, of course, followed by a defeat in the field ; and Pele became, in the opinion alike of friends and foes, the tutelary goddess of Kamehameha.

But the old conqueror and his idols perished together. In the very beginning of his reign, namely, in the year

1819, Liho Liho, with the sanction of the priesthood, and to the great joy of the laity, abolished the faith of his ancestors in the manner already mentioned under a former head, king and people leaping in a day from the most abject superstition into a kind of passive atheism. In abjuring their own idolatry as false and useless, the Hawaiians neither adopted nor rejected any other worship as a substitute. In the widest possible sense of the words,—a sense beyond that of the revolutionists of France,—they attempted to live without a religion.

Thus were these solitary isles, to compare small things with great, swept and garnished for the reception of Christianity pretty nearly as the kingdoms of antiquity had been eighteen centuries before. In profound peace, they obeyed one and the same master, while they had weighed their hereditary superstition in the balance and found it wanting.

Nor war or battle's sound
Was heard the world around

The oracles are dumb.

And sullen Moloch, fled,
Hath left in shadows dread
His burning idol all of blackest hue.

Meanwhile, even before Liho Liho had actually disowned the gods of his fathers, the teachers of a better faith were wending their way towards the Sandwich Islands, expecting, of course, to fight the same battle with prejudice and jealousy, as their brethren had fought in Tahiti for nearly twenty years. On their arrival, however, they found that, under Providence, the mere

contact of an imperfect civilization had already decided the preliminary contest in their favour, while it had undoubtedly also facilitated the remainder of their task, by leading the aborigines, according to the general principles of human nature, to consider Christianity as an element in the envied superiority of the strangers.

As a curious contrast with all this, the missionaries had brought with them from Boston positive orders never to countenance the maxim, that civilization ought to precede Christianity. But the force of circumstances was more than a match for theories. Besides gladly availing themselves of all that the maxim in question had already done for them, the missionaries were themselves constrained to adopt it as the principle of their own practice. It was not Christianity but civilization to make uninstructed women wear something more seemly than the scanty *pau*; it was not Christianity but civilization to make unconverted men rest on the first day of the week; it was, in a word, not Christianity but civilization to enforce either moral or religious observances by motives that could not possibly have any reference to the graces of faith, hope, and charity.

In fact, unless Christianity, as such, were to assume a meaning unknown to Protestantism, the reverse of the maxim in question would involve the most untenable absurdities. Supposing, for instance, the missionaries to have arrived while the indigenous idolatry was still flourishing, would they have silently tolerated the immolation of human victims, till they had successfully inculcated the love of man as springing from gratitude to God; till they had imbued the ruling powers, to say nothing of the five points of Calvinism, with a practical

belief in the fundamental doctrines of the Gospel? The impracticable theory of the new teachers was probably founded on the notion—a notion not peculiar to the American board for foreign missions—that the trading apostles of civilization, as such, were likely to do more harm than good to the cause of Christianity.

Admitting, for the sake of argument, this to be true of the traders themselves, still the trade might be innocent and useful; and, in fact, commerce might safely be assumed, particularly by Britons and Americans, to be the modern instrument of Providence for the moral and religious amelioration of mankind. But missionaries may bring their dogma to an easy test. Let them plant themselves as mere preachers of Divine truth, where nobody else can find secular motives for either preceding or following them, and then candidly enable the world to judge of the tree by its fruits.

But the missionaries, on their arrival, experienced something more than negative encouragement. They were met, in fact, by ready-made evidence of a disposition in high places to regard the religion of the foreigners with favour. Kalaimoku and Boki, decidedly the most influential men in the group, after the death of Kamehameha, had accepted baptism at the hands of the chaplain of a French ship of war; and, as the initiatory rite in question constituted their sole and entire knowledge of Catholicism, the example of their docility was not likely to be neutralized by any bigoted opposition on their parts.

Under all these favourable circumstances, the missionaries encountered comparatively few difficulties, too few perhaps for the genuine success of pure and simple

Christianity. Having begun by securing the support of the chiefs, in imitation rather of the fraternity that takes its name from Jesus than of Jesus himself, they permitted, if they did not encourage, the employment of secular means for the conversion of the people; and this system, according to the acknowledgment of the partisans of the mission, produced an incredible amount of hypocrisy among the immediate dependants of the government, making, even in this young country,

The symbols of atoning grace
An office-key, a picklock to a place.

In spite of all the reasonable grounds of suspicion, the credulous missionaries eagerly represented this hypocrisy as true religion, shutting their eyes, of course, to the singular inconsistency, on the part of citizens of their republic, in establishing a palpable connexion between Church and State. Nor were the chiefs, generally speaking, really more sincere and devout than the followers whom they dragooned into conformity, inasmuch as they entertained a hope, and realized it, too, that Christianity, with a new code of taboos, might revive that spiritual censorship of actions, and words, and thoughts, which the abolition of idolatry had destroyed.

Considering the state of society in most of the Polynesian groups, missionaries perhaps cannot avoid addressing themselves in the first place rather to the chiefs than to the people; but, if they do employ the influence of the dominant class as a means of general improvement, they ought carefully to distinguish, in this respect, between mere civilization and pure Chris-

tianity. If the Hawaiian missionaries had not precluded themselves from adopting this course, by proclaiming that Christianity, as distinguished from civilization, was to be the exclusive object of their earlier efforts, their proceedings might have been more easily reconciled with their professions. But, as matters stand, they appear to have fallen into the snare of making the end justify the means; and perhaps the trite proverb, that extremes meet, has never been more forcibly illustrated than in the Popish predilections of these revilers of Popery.

But this system of aristocratic coercion, besides failing to teach Christianity, prejudiced the mass of the people against the truth, by aiming blow after blow, as we have already seen, at nearly all their social and domestic relations; while, as if to aggravate negative injuries by positive oppression, it compelled the poor creatures to devote time, which would otherwise have been their own, to the erection of spacious and lofty churches, as the shrines of a faith whose yoke was easy, and whose burden was light. As one might have expected, the Gospel was anything but glad tidings to the worried and overworked serfs; the missionaries were regarded as the inventors of a servitude such as the islands had never known before; and, even during our visit, some of our party, who wore black, found themselves objects of suspicion and fear, till they disclaimed all connexion with "mikaneries."

In addition to these special grounds of hostility to the truth, there still lurked in many breasts a yearning after the ancient idolatry. This feeling, whether it was love or fear, was peculiarly powerful in the central

region of Hawaii, where Pele had established her usurpation amid the most awful displays of omnipotent energy, amid terrors which assailed every sense at once through the varied manifestations of the mightiest of all subterranean fires. Liho Liho and Kaahumanu would have been less ready to abolish paganism, if, in order to do so, they had been obliged to place themselves within Pele's territorial jurisdiction; and perhaps few even of the converts would have had the courage to imitate Kapiolani, a female chief of amiable and pious disposition, who, in 1825, bearded the goddess in her den by descending alone into the crater, and there singing the praises of Jehovah, for the first time since the creation, within the greatest of his works.

In process of time, the disaffected of both classes found an ally against the common enemy in a church which did not persecute the people, inasmuch as it had not the support of the chiefs, and which, to a certain extent, conciliated the partisans of heathenism, inasmuch as it exhibited, at least to a savage's faculties of discrimination, many points in common with the exploded superstition. On the occasion of going to London in 1823, Liho Liho had in his suite a Frenchman of the name of Reves, who acted as a kind of secretary to the king and Boki, who, as already mentioned, had been baptized along with his brother, Kalaimoku, into the Catholic faith, before the arrival of the missionaries. When leaving England for France, after his royal patron's death, Reves, according to the most probable version of the story, was requested, or perhaps only authorized, by Boki to send some priests of the Church of Rome to the Sandwich Islands.

Accordingly, in 1827, three reverend fathers, two of them French and one of them English, arrived at Honolulu, at the very time that Kaahumanu and Boki were engaged in a struggle for possessing the supreme power during the minority of Kauikeaouli, or Kamehameha III. As Kaahumanu had by this time espoused the side of the Protestant missionaries, so Boki, as a matter of course, gladly redeemed his pledge to support the Catholic cause, securing thereby the sympathy and assistance of all the disaffected. For two years, the parties appeared to be pretty equally balanced. The priests had crowded congregations; and the missionaries, besides forming a "committee to inquire into the plans and operations of the Jesuits," thundered their anathemas against papists and popery from the pulpit.

In 1829, however, Boki, who had not half the firmness and talent of his deceased brother, was persuaded, by the importunities of Kaahumanu, to join in an order, that the foreigners alone should be allowed to attend the Catholic chapel. But the two dusky potentates soon experienced the truth of Napoleon's aphorism, that earthly dominion ends where the dominion of religion begins. For the first time in the annals of the archipelago, the commands of the chiefs were set at defiance; for the Catholic converts still continued, at first secretly, but at last openly, to avail themselves of public ministrations of their priests. Kaahumanu, that most imperious of queens, was, of course, equally astonished and incensed at the disobedience of her born vassals; but she prudently nursed her wrath to keep it warm, till Boki, good, easy, simple man, took himself

out of the way, by starting with two vessels, to plunder, or conquer, or colonize, the New Hebrides.

Within a month after Boki had thus deprived the new faith of its only protection, Kaahumanu, after issuing a second order, which met the same contempt as the first, made the police carry the Catholics from their devotions to the proper tribunal; and, as the culprits still persisted in their contumacy, they were beaten with rods. Finding this external discipline ineffectual, her Majesty, by way of testing a more searching mode of conversion, kept one of the recusants, a female, in her train without food for seven days; but here again Napoleon's aphorism was made good, for the woman, as the only alternative short of famishing her to death, was dismissed as incurable.

During the remainder of the year 1830, this extraordinary contest continued to rage; but, though conscience, often without having a creed to sustain it, generally vanquished power as to the grand point in dispute, yet the queen, by adopting punishments more profitable than starving and scourging, managed to screw out of her victims a great deal of useful labour in the making of mats, the building of walls, the opening of roads, &c., &c.

Meanwhile, as Boki was, on good grounds, given up for lost, Kaahumanu ventured to take a step, which, in her rival's presence, even she might have deemed too bold. From persecuting the flock, she resolved to smite the shepherds also; and accordingly, on the 2nd of April, 1831, the reverend fathers were peremptorily ordered to leave the islands. Messrs. Bachelot and Short—for M. Armand had previously taken his depar-

ture—professed a willingness to obey ; but, having been privately encouraged to remain by some chiefs who dreaded the rampant austerity of the victorious cabrists, they contrived, with an occasional sacrifice of candour, to spin out the remaining nine months of the year on the pretext that no ship would give them a passage.

In December, therefore, Kaahumanu resolved to send away the two priests in a vessel belonging to the government ; and the *Waverley*, an old brig of about one hundred and forty tons, was equipped for this work of purification, with a yellow flag at the fore. In addition to the petty insult of this practical joke—a joke which clearly did not originate with the Queen—the festival of Christmas, as if to impart a peculiar zest to the triumph of puritanism over popery, had been selected for the embarkation ; and, accordingly, in spite of their entreaties for a day's respite, Messrs. Bachelot and Short were interrupted in their devotions by the police, and conducted on board of the *Waverley*, while, partly to check any disturbance and partly to make a holiday of the occasion, all the troops in Honolulu were mustered with veritable muskets and bayonets.

The brig forthwith made sail under a salute from the fort, of which the sincerity was not to be doubted ; and, after a voyage of about five weeks, she left her passengers on the beach at San Pedro in California, a secluded and uninhabited spot which has been already mentioned, with two bottles of water and a few biscuits, thence to find their way, as they best could, to the nearest professors of their own creed.

In the year 1832, the Queen died, and was succeeded by Kinau, one of Liho Liho's dowagers, and now

wife of Kekuanaoa, under the title of Kaahumanu II. In perfect keeping with her assumed name, the new regent pursued the persecuting policy of her predecessor. But, as all the common-place plans had failed, she improved on the original practice under the light of experience; and, accordingly, two or three old people, who had been convicted of Popery, were doomed to remove with their bare hands the accumulated filth of a certain part of the fort, which had long been devoted to the private convenience of the soldiers and prisoners. This unique discipline might make hypocrites, but could not make Protestants; and, if its victims were really pagans at heart, they most probably drew odious comparisons between the degradation of this calvinistic purgatory and the dignity of being sacrificed to the gods.

Down to 1836, the Rev. Mr. Bingham and his associates had everything their own way. Towards the close of that year, however, an Irish priest of the name of Walsh arrived from Valparaiso, who, on the intervention of the captain of a French sloop of war, as also of Lord Edward Russell, of the *Acteon*, was allowed to remain, under the promise of not acting in his professional capacity. Within a few months, moreover, the plot thickened in consequence of the return of Messrs. Bachelot and Short, from California. After having enjoyed snug quarters in the mission of San Gabriel for about five years, the two gentlemen in question had been again cast adrift by the revolution of 1836, and, hearing of the visits of friendly men-of-war, determined once more to try their fortune at the Sandwich Islands, in the hope of being now received with more favour.

In April, 1837, they reached Honolulu, and, immediately on landing, reported themselves to the authorities. They were instantly ordered to re-embark on board of the vessel that had brought them. This they refused to do; and, at last, after a month of pretty stormy negotiation, they were rowed out to the *Clementine* by the police, and pushed up the brig's side, on deck, in defiance of the captain's remonstrances, while two of the guns of the fort were all ready, with the slow matches burning, to prevent or punish any actual resistance. In this emergency, Mr. Dudoit, after hauling down the English ensign, abandoned the vessel with his ship's company, leaving the two priests and an infirm creature of an old servant, who would not desert them in the hour of trial.

In this floating prison, which Mr. Walsh alone was permitted to visit, the three victims of intolerance were broiled under the sun of a tropical summer from the 20th of May to the 8th of July. On the day last mentioned, the *Sulphur*, Captain Belcher, and, two days afterwards, the *Venus*, Captain du Petit Thomas, anchored off Honolulu; and thus Messrs. Bachelot and Short had the opportunity of simultaneously appealing to the officers of their respective nations. After an interview with the king, which was obtained with difficulty, and at which the Rev. Mr. Bingham had the bad taste to appear as interpreter, the two captains succeeded in releasing the priests from confinement, on condition of their leaving the islands by the first favourable opportunity.

In pursuance of this arrangement, Mr. Short sailed for Valparaiso on the 30th of October. But, before

Mr. Bachelot could take his departure, M. Maigret, another priest of the same nation, arrived in the Europa from Tahiti; and, as he was absolutely forbidden to land, he found himself in the same predicament as that from which M. Bachelot had been so lately rescued. In this state of affairs, the two priests purchased the Honolulu, a vessel of about forty tons; and M. Maigret, without being allowed to place his foot on shore, was shifted, like a bale of goods, from the Europa into his own little craft.

Meanwhile, M. Bachelot, whose health had suffered from persecution and mortification, begged for a brief respite, in order to regain sufficient strength for a long and comfortless voyage; but, as orthodox mercy could lend no ear to the cry of a papist, the invalid was compelled to embark, borne down as he was at once by sickness and by sorrow. When the vessel reached the Island of Ascension, poor Bachelot had been for several days a corpse; and there were his remains deposited; while a wooden tomb, in addition to the cross, as an emblem of his faith, recorded merely his name.

The persecution now raged more fiercely than ever, while new varieties of torture were invented. A party of sixty-seven Catholics having been brought before the governor, they all recanted but thirteen; and these recusants also were induced to see the error of their ways, and to exchange the *Pule Pulani* for the *Pule Mr. Bingham*, by being suspended in pairs by the wrists across the top of a wall seven feet high, with their ancles in irons.

On another occasion, two women, respectively of

thirty and fifty years of age, were similarly treated, excepting that they were not tied together; and after the miserable wretches had been hanging about eighteen hours, all night in the rain and all the forenoon in the sun, some of the foreign residents applied in their behalf to Mr. Bingham, who refused, however, to interfere, alleging that the sufferers must have been condemned for some offence against the laws. Of course, they were, as the judge very clearly explained to the aforesaid party of sixty-seven. They were not, he told them, to be punished or reproved for repeating Catholic prayers or believing Catholic doctrines, but because, in so believing and so repeating, they had disobeyed the orders of the king. The casuist must have borrowed this notion from Jonathan Oldbuck, when proving to Hector McIntyre that, in Scotland, debtors were imprisoned, not for leaving their debts unpaid, but for slighting his majesty's command to pay them.

But another party was now to appear on the stage, while some of the original performers were glad to withdraw behind the scenes. As the revolution of the "three glorious days" had been the means of placing the Church of Rome and the Protestant sects on one and the same footing with respect to the state, Louis Philippe, in order to appease and conciliate his Holiness and the national priesthood, undertook to discharge the duties of "Most Christian King" beyond the limits of France, still to be the champion of the faith against all the world but the French Chambers. In consequence of this engagement, his majesty had taken the Romish Bishop of the Pacific Ocean under his direct and immediate protection.

Accordingly, on the 9th of July, 1839, the *Artemise*, Captain La Place, arrived at Woahoo for the ostensible purpose of obtaining redress for the persecution and expulsion of Messrs. Maigret and Bachelot; but the real object of the visit was to coerce the native government into an unlimited and unqualified toleration of Catholicism. Strictly speaking, France had no right to interfere by force in the matter. With regard to the internal policy of the Hawaiian government, this was abundantly clear, notwithstanding Captain La Place's curious assertion, that, amongst civilized nations, there was "not one" which did "not permit in its territory the free toleration of all religions."

Again, as to the special case of Messrs. Bachelot and Maigret, these gentlemen were attempting to violate or evade a law, which, whether politic or impolitic, the chiefs were competent to make, namely, the law against propagating Catholicism among the natives. They were expelled, not as Papists or as priests—for Mr. Walsh, who was allowed to remain, was as much of a priest and a Papist as either of them—but as apostles of Popery; for, though M. Maigret had not, like his associate, actually tried to proselytize the people, yet he possessed, in common with M. Bachelot, a title which arrogated a kind of territorial jurisdiction, which involved the work of propagandism as part of his official duty. Still the two priests had been treated with great harshness; and, if France had not made their sufferings a cloak for her ulterior views, she might justifiably have extorted some satisfaction for any excessive infliction of injury or insult. France was, in fact, making her piety the instrument of her ambition. All her demands, in-

cluding her paltry exaction of twenty thousand dollars, were intended to bring about such a crisis as would appear to justify the seizure of the islands.

But Captain La Place had not been commissioned to argue the point. He had been sent to tell the Hawaiians, as a thing not to be disputed, that "to persecute the Catholic religion," which was no more the established creed of the grand nation than Calvinism itself, "was to offer an insult to France and to her sovereign;" and he had been authorized, *à la Joinville*, to enforce this doubtful axiom by the equally doubtful boast, that there was "not in the world a power capable of preventing" France from punishing her enemies. But, with the batteries and bayonets of the *Artemise* at his back, the captain carried all before him. He got Catholicism placed on the same footing as Protestantism throughout the group; and then, landing with about a hundred and fifty men under arms, he attended a military mass, military enough, in all conscience, celebrated in the palace by the Rev. Mr. Walsh.

The French, of course, were not slow to reap the fruits of their victory. During our visit there were three priests in Honolulu, besides two or three more in other parts of the archipelago; and the Bishop of Niihau was shortly expected on a tour of visitation. In addition to being engaged in building a large cathedral, the reverend fathers kept two schools, which were attended by about nine hundred young people of both sexes, natives and half-breeds; and many of the pupils had made great progress in various branches of education, while a few of them spoke French with considerable fluency. The new faith was daily extending

its influence among the natives through the untiring zeal of its teachers; but, though it was no longer exposed to legal persecution, yet it was still subjected to the rude anathemas, spoken and written, of the Protestant missionaries. We had a good deal of intercourse with the priests, visiting their schools and occasionally attending their chapel, and were, on the whole, strongly prepossessed in their favour; and, however much their presence is to be regretted, even on the single ground that it has produced a schism, as it were, in language as well as in sentiment, in civilization as well as in Christianity, I sincerely trust that French Catholicism may henceforward encounter no other antagonist than truth, tempered by courtesy.

For the deplorable details of the last few pages, some of the Protestant missionaries were, beyond all doubt, chiefly responsible. It was they who, by disingenuously confounding things that they knew to be different, taught the chiefs to misapply the law against the ancient idolatry to the prejudice of Catholicism; it was they who inspired the government with a vague and mysterious dread of papal power and pretensions: in a word, it was they, who, by their suggestions, introduced secular authority as an instrument of conversion, and, by their connivance, sanctioned its merciless abuse. To put the charge into a shape which embodies its spirit without leaving room for evasion, the persecution would never have been begun, if all the missionaries had zealously united to prevent it; and the persecution would never have been continued, if all the missionaries had zealously united to check it. Even if the motive of the individuals in question had been a pure and simple

abhorrence of the religious corruptions of the Church of Rome, their conduct would be indefensible. But there is strong reason for suspecting that their real motives were, in a great measure, secular. They were doubtless imbued with the political prejudices of their country against Catholicism; and they could not fail to dread a religious rivalry which might tend to break the ties that connected themselves with the state. In short, they were most probably actuated rather by a spirit of republicanism and the aspirations of ambition, than by the disinterested love of the genuine truths of the gospel.

But the missionaries are nearly as responsible for the schism which has succeeded the persecution, as for the persecution itself. It is chiefly their inflexible austerity, as brought to bear on the natives through the terrors of the law, that has filled the Catholic ranks; it is their unrelenting code of manners and morals, as enforced by pecuniary penalties, that has driven the people to embrace a new faith, in the hope of being delivered from the yoke of the old. If the cabrinists had had a single eye to the Bible, without straining it, on the one hand, into fanaticism, or tainting it, on the other, with worldliness, the Catholics would never have provoked such a degree of hostility as could in any way have justified the intervention of France, with all its attendant evils.

After all that I have said, I have much pleasure in acknowledging that, in their own proper sphere, the missionaries have done a great deal of good. Their mistaken conduct is the more deeply to be regretted, inasmuch as the success which has crowned their purely

professional labours shows how much more their zeal and patience might have effected under a better system. Worldliness and fanaticism, besides leading to the misapplication of their time and talent, have, we are bound to believe, deprived them of much of that aid, without which all human efforts are unavailing; for God, though he often employs bad men as his unconscious tools, has never, since the world was made, prospered the schemes of his professing servants for usurping, as the reward of earthly policy, the glory due to himself alone.

So far as Catholic rivalry is concerned, let them simply do their own duty. Let them teach what they believe to be the truth, without either exaggerating or diminishing its worldly incidents and results. They have, it is said, been fond of pointing to California and the Sandwich Islands, as practical illustrations respectively of Popery and Protestantism. Now, the difference between the Spanish race and the English, affecting, as it does, nearly all the relations of life—social, and commercial, and political—has had more to do in the matter than any thing else; while, even with reference to religion alone, the cases are not at all parallel: for the civilization of California began with Catholicism before trade was known, and that of the Sandwich Islands, ere Calvinism was introduced, had taken root under the fostering influence of commerce.

EDUCATION.

It is chiefly through education, as such, that the missionaries have made progress in the work of conversion; and here again has their theory been at fault, that Christianity ought to be taught independently of civi-

lization. In fact, the *palapala*, or learning, was confessedly more attractive and influential in the earlier days of the mission, than the *pule*, or religion; nor could there be a stronger proof of this than the circumstance, that the chiefs, after permitting the *pule* to be communicated to the people, still wished to monopolize the *palapala* for themselves.

In the elementary schools which are established throughout the group, under a general law, about eighteen thousand children are said to be instructed in reading and writing by native teachers. The specified number I suspect to be an exaggeration, inasmuch as, out of a population of eighty-eight thousand, the young of both sexes, under eighteen, according to the computations under a former head, can hardly be estimated at more than twenty-two thousand in all; so that, to say nothing of actual attendance, whether regular or occasional, there cannot well be so many as eighteen thousand names on the books, more particularly as, at least, a thousand children are trained in other institutions.

Already have these humble seminaries become a subject of contention between Protestantism and Catholicism; for, wherever Catholics and Protestants are mingled together, one party or other is sure to make a grievance of the religion of the teacher. Hitherto, the Catholics have, in practice, had the better ground for complaining, while the government has plausibly enough alleged in its defence the difficulty of finding sufficiently well qualified members of the more recently established persuasion.

This inequality between the two denominations,

though it was clearly unavoidable for a time, was construed into a violation of Captain La Place's treaty ; and about four or five months after my departure, the Embuscade, Captain Mallet, visited Honolulu, to remedy or avenge this additional "persecution of the Catholic religion," this supplementary "insult to France and her sovereign." Captain Mallet got an explanation, which silenced him, if it did not satisfy him, and departed in high dudgeon, without exchanging salutes, to report the circumstances to his superiors. If the grievance in question did not violate Captain La Place's treaty, then Captain Mallet was, of his own accord, meddling with a point of purely internal policy ; and, if the grievance in question did violate Captain La Place's treaty, then had France placed herself in a position inconsistent with the independence of the group. In either case, England and America ought to take care that the French guarantee of native sovereignty is neither evaded nor nullified by the treaty aforesaid, or by any similar treaty whatever.

In Mowee, two superior schools, one for a hundred boys, and the other for as many girls, are conducted under the exclusive control of the Protestant missionaries. Besides reading and writing, the pupils are instructed in singing, drawing, painting, engraving, mathematics, geography, history, &c. ; and recently the useful has been added to the elegant, by the introduction of such arts as spinning, knitting, weaving, &c. As it is the native tongue that is taught in these institutions, the mission, as a matter of course, comprises an establishment, or perhaps more than one establishment, for printing ; and, so far as Honolulu was con-

cerned, we visited, with much interest, an office with four presses and twenty hands, in which, with the exception of an American superintendent, all the workmen, compositors as well as pressmen, were natives.

In Honolulu there are two schools, in which English is taught. The larger of the two institutions is a free school for all children, but is attended principally by half-breeds, the progeny of native mothers by fathers of various races—English, French, Spanish, Chinese, &c. It is supported, in a great measure, by the voluntary contributions of the foreign residents, Hungtai, the leading Chinaman, being one of its main pillars. Again, the smaller of the two institutions has not, as to its general object, its parallel in the world. It is a seminary for training, apart from all the rest of mankind, the future rulers of the archipelago, an exclusive nursery of kings and queens, governors and counsellors, an improved edition, in miniature, of the Happy Valley of Rasselas.

The High School, as it is called, we visited at the request of Governor Kekuanaoa, the personage most extensively interested in the establishment. The pupils we found to be twelve in number, six boys and six girls, while a full third of the stock belonged to our good friend who accompanied us, namely, Moses, future governor of Kauai, Lot, future governor of Mowee, Liho Liho, heir presumptive to the throne, and Victoria, destined to contract some grand alliance. Though the school had been established only about two years, and most of the pupils were, at the time of its establishment, entirely ignorant of our language, yet many of the children now read English with a correct accent, and spoke it with

considerable fluency, thereby increasing our regret that the missionaries had clung so long and so obstinately to the Hawaiian. In writing, arithmetic, drawing, geography, &c., some progress had been made. In their geography, however, the young ones were disposed to be sceptical, unanimously declaring, that the man who made the map had committed a great mistake in representing their islands as so very small in comparison with the rest of the world.

Even to maturer minds among the natives the map of the world must, at first, have been a source of astonishment, for, seeing around them only small specks in the ocean, and knowing of nothing else from tradition, the aborigines would naturally consider the earth as a boundless expanse of water studded with isles, as a kind of counterpart of the starry sky. Be this as it may, the remark of the children was far more rational than Liho Liho's logic, when he was told by some of the earlier missionaries that the earth went round. "Don't tell me that," said his majesty, "so long as I see Lanai," pointing from Lahaina to that island, "lying on the same side of me every morning." But much of the absurdity of the king's notions of cosmography might be explained by the fact, that, in this respect as in every other, the solitary despot naturally regarded himself as the centre of every movement, thinking that the earth, if it really went round at all, could only go round him.

To return to the pupils: their behaviour was, on the whole, very becoming, though some of the young ladies did occasionally raise the skirts of their frocks in order to scratch their ankles or perhaps the calves of their

legs. The teachers were Mr. and Mrs. Cook, members, I believe, of the missionary body ; and, after what I have said as to the appearance and proficiency of those under their charge, I need hardly add, that we left them with the most favourable impressions as to their moral and intellectual qualifications. This was, perhaps, the most interesting hour that we spent in Honolulu.

PRODUCTIONS AND MANUFACTURES.

Having incidentally mentioned various productions of the group under former heads, I shall here confine myself to such articles as appear to bear on the subject of extraneous commerce, beginning with a few preliminary observations as to the state of agriculture and the nature of the soil.

In the days of barbarism, the earth was cultivated by means of sticks, or bones, or stones, of any thing, in short, that could scratch the surface or dig a hole ; while, in bringing home the crops, the serfs, male and female, acted as cattle, and calabashes and gourds served all the purposes of waggons. Now, however, spades, and hoes, and ploughs, and, in fact, all the means and appliances in ordinary use among white agriculturists, have got a footing among the aborigines, and are speedily becoming popular as well with the ignorant as the intelligent, as well with the indolent as the industrious. It is quite level to the most savage capacity, that a gentleman farmer enjoys a much pleasanter time of it than a beast of burden.

In the valleys, the soil consists of vegetable mould, which, besides its intrinsic productiveness, is constantly fertilized and refreshed, not only by its own share of

the rains, that deluge the mountainous region, but also by the cascades, that rush down from the hills. With the exception of the valleys, nearly all the arable surface of the group needs, in a greater or less degree, the aid of irrigation, inasmuch as the ground, containing, as it does, large proportions of such thirsty ingredients as sand and ashes, rapidly absorbs even the heaviest showers. But, as I have already mentioned, far more than the half of the whole area is incapable of any and every kind of cultivation, being either peaks in which nature herself has never "moored" a tree, or precipices which nourish, or have nourished, the primeval forest in their clefts, or slopes of volcanic refuse which deny, in the season of drought, even their coarse pasture to the wandering cattle.

But the good soil, to be far within the mark, may be estimated as one sixth part of the entire surface, or, in round numbers, as 1,000 square miles, or 640,000 acres; and, in order to give at least a vague idea of the possible value of this breadth of land in tropical agriculture, I may mention, that Messrs. Ladd and Co. of Honolulu have produced an average of a ton and a half of sugar per acre,—a rate at which 1,000 square miles would yield nearly 1,000,000 tons, or at least four times the total supply of the United Kingdom. The extent of cultivation in question is, I apprehend, fully equal to the extent of cultivation, whether actual or probable, in Jamaica.

But the arable land, whatever may be its quantity, is available, almost without deduction, for mercantile enterprise,—always, of course, assuming that the objections of Church and State can be removed. The scan-

tinness of the population, which does not average fifteen souls to the square mile, must manifestly leave, under any circumstances, most of the soil free for the operations of the capitalist, while the facility with which food can be produced must as manifestly require a very small share of the cultivator's time for the growing of the necessaries of life. These remarks will derive additional force from a more particular consideration of the chief article of subsistence. I quote from "The Hawaiian Spectator :"—

"In regard to cheapness of food for the natives, it is proper to state, that forty feet square of land, planted with *kalo*, affords subsistence for one person for a year. A tract of land one mile square, in fields, will occupy and feed a hundred and fifty-three persons; the same extent in vineyards will occupy and feed two hundred and eighty-nine persons; while the same quantity of land in *kalo* will feed 15,151, and probably not more than one-twenty-fifth of that number would be required in its cultivation. The above estimate of the number of persons that can be supported from one square mile of land cultivated in *kalo*, is made by allowing paths three feet wide between each patch of forty feet square."

According to this estimate—which, so far as the *kalo* is concerned, appears to contain no flaw,—six square miles might maintain the whole population in health and vigour; but, supposing every person, without distinction of sex or age, to require half an acre, there would still remain, even on that liberal and extravagant supposition, about 600,000 acres for objects not immediately connected with the maintenance of the natives.

Among the more important productions of the islands, sugar deserves to occupy the first place, if it were only that his majesty, Kamehameha III., has turned his attention to the manufacture of the article. The yellow cane, which is indigenous, is alone cultivated. Though its juice is acknowledged to be of excellent quality, yet, hitherto, the sugar has been of an inferior description, through the want of skill and experience. There is little doubt, however, that, in time, art will do justice to nature, when once the business has got into the hands of capitalists. The growers are already numerous, if not wealthy, as the following extract from a letter which I received from Messrs. Ladd and Co. sufficiently shows.

“The quantity of land under cultivation by natives and others in the vicinity of our mill is so great, that latterly we have abandoned its culture, and allow our works to be employed in manufacturing sugar for cultivators, returning to them one half of the products. We regret to say that our works are entirely inadequate to the wants of the planters, and much cane will unavoidably be lost the present and coming season.”

But the grand difficulty in the way is the want of a market, more particularly as the group is so effectually cut off, both physically and politically, from the rest of the world. Still, the difficulty does not amount to a ground of despair. Considering that the article is retailed at five cents, or two pence halfpenny, a pound, about 90,000 natives might surely consume, at least with the help of foreign residents and foreign visitors, something like a shipload among them in a year, while, with a little management and negotiation, the islands

might supply with sugar nearly all the coasts of both continents above their own latitude, California, the Oregon, the Russian settlements both in Asia and America, and ultimately Japan. If the archipelago could once secure this foreign trade, it could hardly ever be dislodged from it by any rival, so long as it enjoyed the nautical advantages of being the great house of call both in the length and in the breadth of the Pacific Ocean.

Silk appears to have fewer obstacles to surmount than sugar. The mulberry yields six crops in the year; and females, who can reel half a pound a day, are contented, in addition to their food, with six cents and a quarter, or a fraction more than three pence, paid in goods at an advance of cent. per cent. on the prime cost. Under these advantageous circumstances, an article of superior quality can be sold for a dollar and a half per pound, so that it can command, freight and duty notwithstanding, a remunerating price either in England or in America.

Silk, however, cannot be produced so extensively as sugar, inasmuch as the mulberry thrives only in such places, few and far between, as are completely sheltered from the trade-winds. The principal establishment, which is in Kauai, is under the management of Mr. Titcombe, an American of industry and enterprise. He is expected to succeed in his speculation, though his countrymen, who were the original projectors, failed in it, partly because they had everything that was peculiar to the soil and climate to learn, and partly because some of them had good reason for placing very little confidence in the others. If the business in general should

prosper, it might be worth while to import skilful and experienced labourers from China, at least for the purpose of superintending the more delicate processes.

Tobacco, cotton, coffee, arrow-root, indigo, rice, and ginger thrive luxuriantly throughout the group. Tobacco was at one time prohibited; and, in order to prevent exportation as well as consumption, the “denounced” weed was torn up by the roots, as a public enemy. The absurd system has, I believe, been abrogated; and, at all events, tobacco grows in the face of day, without caring for Church or State. Coffee, an innocent enough beverage in most countries, also fell under the ban of the earlier missionaries,—probably as being a boon companion of tobacco, but more probably because, in furnishing an article of export, it tended to inundate the islands with the accursed thing in the shape of commercial civilization. Whatever was the cause, the coffee shared the same fate as the tobacco, being first destroyed by fanaticism, and then replaced by common sense. As I have already mentioned, it is, in my opinion, equal to Mocha; and, when grown in sufficient abundance, it may, I doubt not, be exported with advantage to almost any part of the world.

Indigo, though it thrives well, is yet not likely to be extensively cultivated, by reason of the breadth of land which it requires,—at least, so long as other crops, less precarious and more profitable, can advantageously occupy the soil. Cotton has only of late become an object of attention to foreign residents; the article, as prepared by the natives, was of course not fit to be sent to market. Of arrow-root the same may be said. In-

trinsically, it is of fine quality ; but so negligent are the manufacturers in washing and drying the article, that a small parcel lately sent to England by the Hudson's Bay Company did not cover cost and charges. Ginger grows spontaneously in lavish abundance throughout the group ; but as yet it has not attracted any notice. Rice is but little cultivated, chiefly because the most favourable situations for the purpose, which, on account of the scarcity of water, are not numerous, are already occupied by that grand staff of life, the *kalo*.

The kukui oil is an article of rising importance. It is extracted from the nuts of the *kukui*, or light-tree, which are so unctuous, that, when strung on a twig, they serve the natives as candles, each nut igniting the one below it before it is itself consumed. Taking the hint, one of the foreign residents has lately erected a mill for breaking and pressing them so as to separate the juice from the husks. The oil, though inferior to linseed, is yet so much cheaper, that it finds a market at Lima to the annual amount of upwards of a thousand barrels ; and a little of it has also been sent with a profit to the United States. The attention of many of the residents is now directed to the article ; and, as the trees are very plentiful, and may be seen in groves of miles in length, the manufacture may be increased to almost any extent.

Among the valuable productions of the islands must also be reckoned salt, pearl-shells, and sandal-wood. Salt is gathered, in a crystallized form, from the surface of a small lake about four miles to the west of Honolulu, situated within an old crater about a mile from the sea. This lake is very shallow, hardly coming above a man's

knees, excepting that a hole in the middle, long supposed to be bottomless, has been recently ascertained to be thirty or forty fathoms deep. By this hole, it is generally imagined to be connected with the ocean, though doctors differ as to whether or not it is affected by the tides. This uncertainty as to the tidal influence conclusively shows that the subterranean passage, if it exist at all, is far from being free and open, while a similar inference may be drawn from the fact that the rains of the brief winter of this leeward coast freshen the lake to the extent of making the salt entirely disappear. In the dry season, the more that is taken away, the more still seems to be left; and, in the course of one year, as much as 30,000 barrels have been procured from the spot.

Pearl-shells are numerous; and they may be said to cost nothing, inasmuch as they are caught for the sake of the oysters that they contain. These fish are found not only in the sea, but also in a small lake, near to that just described, though there they are so inferior in size and quality as not to be disturbed by man. Sandal-wood, as we have elsewhere shown, has been nearly exhausted, excepting that, in the forests of Hawaii, a few trees may still be found. Young plants, however, are said to be springing up throughout the group, though, meanwhile, the Chinese, it is to be hoped, may put an end to the demand for the article by discarding the gods that are its principal consumers. If commerce alone achieved the good work in the Sandwich Islands, commerce and Christianity together may be expected to make some impression on China.

But the group contains timber of intrinsic and per-

manent value. Good materials for ship-building exist, which, though not easily accessible in the present state of the communications, may ultimately be worth looking after, if they really be, as people say, proof against the attacks of worms and insects. Woods well adapted for cabinet-work are also various and abundant, such as koa, ko, kamanu, ebony, &c. With the exception of the ebony, which is of inferior quality, most of these woods, of which there are fifteen or twenty kinds, possess a beautiful grain, and are nearly as hard as mahogany. In appearance some of them resemble mahogany, others maple, others elm, and so on. We had many opportunities of seeing these woods, as most of the furniture in Honolulu is made from them. The prickly pear, also, may, like the mulberry, become indirectly useful, as the means of introducing the cochineal insect. The climate may be considered as peculiarly propitious to any attempt of the kind, while the tree, besides being already common, is propagated with wonderful facility; and, as the attention of some of the residents has been drawn to the subject, cochineal may soon have to be enumerated among the productions of the Sandwich Islands.

On the uplands of Mowee, which present a kind of temperate zone within the tropics, wheat and potatoes grow with great luxuriance. The potatoes are of uncommon size; and the wheat is said to be cut down, harvest after harvest, from the same grounds, just like so much hay. To say nothing of domestic consumption, or of the supply of shipping, these articles, particularly the wheat, might find a ready and profitable sale in foreign countries. The price of flour, as we have seen,

is very high in California ; and it is still higher on all the Russian coasts of the Pacific, more especially in Kamschatka, and the sea of Ochotsk, while, so far as the rivalry of the Oregon is concerned, the Sandwich Islands, from their central position, will always have the advantage in lowness of freight and opportunities of transport.

In closing this part of my subject, I need merely enumerate the skins of wild goats, and the hides and tallow, and beef of the herds, that wander at will among the mountains, as productions that have an important bearing on the commerce of the group.

To pass from productions to manufactures, the most showy specimens of native art are the military banners of the chiefs. The *kahile*, as the banner is called, consists of a pole elaborately inlaid with ivory, tortoiseshell, and human bone, at the upper end of which are fixed plumes of feathers, similar to those that are used at funerals in England, excepting that the colours, instead of being black, are the brightest possible green, yellow, red, &c. These *kahiles*, as I have elsewhere stated, are more or less splendid according to the rank of the owners. The great banner of the Kamehamehas, which, now that they no longer go to war, is displayed only in the funeral processions of the members of the royal family, is thirty or forty feet high, and requires several men to support it.

An humbler but more useful article of native manufacture, is rope for rigging the double canoes, or for any other purpose to which rope can be applied. Some of it is made from the cocoa-nut, some of reeds, and some of grass ; but all is strong and well laid. But the

principal manufacture of the group is the *kapa*, or cloth. It is made of the inner bark of the wouty tree (*morus papyrifera*), which, after being reduced to a pulp, is beaten into such a degree of thickness as may be desired, while the face of the fabric is susceptible of infinite variety, according as the face of the mallet is smooth, or grooved, or checked, or marked, with diamonds or any other figures whatever. In itself, the article is of a light colour, while, by bleaching, it may be rendered perfectly white. But to the simplicity of nature, the aborigines of both sexes generally prefer a gayer hue, and for this purpose they stain the cloth with a number of indigenous dyes, comprising all the possible shades of brown, yellow, green, and red, several colours being frequently contrasted in a kind of mosaic on one and the same piece or web.

Of all the native manufactures, perhaps this alone enters into general commerce. It is used for the sheathing of ships, for which purpose it is, in the North Pacific, preferred to felt; it has certainly the recommendation of cheapness, as five or six sheets, of twelve feet square, may be had for a dollar. In this article, the king is the principal dealer; for, in the shape of taxes, his majesty is glutted with cloth, and is glad to part with it at a reasonable rate.

TRADE.

Under the preceding head, I have been the more minute in detailing the internal resources of the country, sensible, as I am, of the expediency of finding some balance against the heavy imports. At present, the merchants have little but specie to remit in return

for foreign commodities ; and, in consequence of this, the exchange is, as a matter of course, so much against the islands, that the dollar, which in London seldom brings more than 4s. 1½*d.* sterling, varies in Honolulu from 4s. 6*d.* to 4s. 10*d.* of the same standard. Thus are the trader's nominal receipts reduced, by a single blow, from 8 to 15 per cent. ; and, taking his selling price to be the double of the prime cost, his nominal profits are diminished from 16 to 30 per cent. In other words, an apparent addition of 100 per cent. turns out to be a real addition never exceeding 84, and sometimes does not exceed 70. If, however, remittances could be made in native productions, the merchant would have at least a choice as to his mode of operation ; and, if articles of export should prove to be more advantageous in the premises than dollars, or bills of exchange, the specie would, in the same proportion, permanently lose part of its local value.

But, after all, it is not to their internal resources that these islands, as a whole, must look for prosperity. Their position alone has, in a great measure, made their fortune ;—a position which is equally admirable, whether viewed in connexion with the length or with the breadth of the surrounding ocean.

For all practical purposes, the Sandwich Islanders are on the direct route from Cape Horn to all the coasts of the Northern Pacific. With respect to Kamtschatka and the Sea of Ochotsk, this is evident at a glance ; with respect to Japan, when its ports shall be opened, vessels will find their advantage, even without regard to refuge or refreshment, in deviating to the right of their straight course, in order to make the

north-east trades above the equator as fair a wind as possible; and, with respect to California and the north-west coast, the apparently inconvenient deviation to the left is rendered not only expedient, but almost necessary, by the prevailing breezes which have just been mentioned. On this last point, Cook's accidental discovery of the archipelago, while he was making his way to New Albion, was tolerably conclusive. In addition to finding the islands, he marked out the best track for his successors; just as the Portuguese, on their second voyage to India, were driven to Brazil by a necessity to which modern navigators voluntarily yield; thus, by the by, stumbling on the new world by chance within eight years after its premeditated discovery, and showing that a few more seasons of disappointment and delay would have prevented the human mind from winning one of its proudest trophies, in the sagaciously-planned and resolutely-executed enterprise of Columbus.

But the group as naturally connects the east and the west, as the south and the north. Lying in the very latitude of San Blas and Macao, with an open sea in either direction, it crosses the shortest road from Mexico to China; while, considering its great distance to the westward of the new continent, but more particularly of its southern division, it may, without involving any inadequate sacrifice, be regarded as a stepping-stone from the whole of the American coast to the Celestial Empire. With respect, in fact, to the remoter points of departure, the deviation is far less than it seems, inasmuch as the westerly winds, which prevail within a few degrees of each side of the tropics, and thereby embarrass any direct passage to the west-

ward above or below the limits of the trades, bring California and all to the north of it into the track of Mexico, and place Chili pretty nearly in the situation of Peru.

Again, with reference to each of the last two paragraphs, the islands lie but little out of the way of the returning voyagers. Situated, as they are, within little more than a day's sail of the westerly winds that sweep the Northern Pacific, they are just as accessible to China and Japan, as China and Japan are to them; while any visitor, to whom the winds in question may still be requisite for the prosecution of his easterly course, may again escape from the influence of the trades without having lost a week. In effect, the group is a kind of station-house, where two railroads cross one another, each with parallel lines for opposite trains.

The position of the archipelago, as just described, is the more valuable on this account, that it neither is nor ever can be shared by any rival. If one makes no account of the comparative vicinity of mere islets, which are worthless alike for refuge and refreshment, the Sandwich Islands form perhaps the most secluded spot on earth, being at least twice as far from the nearest land as the lonely rock of St. Helena.

But it is not merely for the purposes of refuge and refreshment that the position in question promises to be available. Already have the Sandwich Islands begun to be a common centre of traffic for some of the countries, which they serve to link together. Even now, their exports comprise a larger proportion of foreign commodities than of native productions, such as hides and sea-otters, from California, silver from Mexico, teas

and manufactures from China. Though the system of entrepôts, which, in a great measure, nursed Holland and Belgium into wealth and populousness, has gone by in Europe, yet it seems to be well fitted to regulate, for many years to come, the intercourse between the ports of the Pacific Ocean, inasmuch as many of them must long be unable to consume whole cargoes, in unbroken bulk, of articles of the growth or manufacture of any single country. In this respect, the tendencies of nature have, to some extent, been strengthened by the capricious administration of the impolitic laws of Mexico. In that republic, the duties, which are always high in the terms of the tariff, are collected, according to whim or necessity, with greater or less strictness, each port, as well as each week, having its own peculiar mode of reducing the theory to practice ; so that, when a vessel finds the authorities in a troublesome or extortionate humour, she runs for it to Honolulu, there disposing of her cargo at better prices, or at least depositing it for better times. As an instance of this, the "Joseph Peabody" that entered the harbour along with us, was indeed from Mazatlan, as I then mentioned, but had actually brought most of her goods by that circuitous route from China.

When the ports of Japan are opened, and the two oceans are connected by means of a navigable canal, so as to place the group in the direct route between Europe and the United States, on one hand, and the whole of Eastern Asia, on the other, then will the trade in question expand in amount and variety, till it has rendered Woahoo the emporium of at least the Pacific Ocean, for the products, natural and artificial, of every

corner of the globe. Then will Honolulu be one of the marts of the world, one of those exchanges to which Nature herself grants in perpetuity a more than royal charter.

If these anticipations,—and even now they are not dreams,—be ever realized, the internal resources of the islands will find the readiest and amplest development in the increase of domestic consumption and the demands of foreign commerce. In some direction or other, every native production will follow its appropriate outlet; and, in a word, the Sandwich Islands will become the West Indies of all the less favoured climes from California to Japan. As I have already remarked of one or two articles in particular, the greater part of the exports will most probably meet their best market in the Russian settlements. In them, the necessities, as well as the luxuries, of life are pearls of inestimable value; and, if expediency could justify aggression, the czar might more excusably have seized this archipelago than ever any one else appropriated a foot of land that did not belong to him. Even now, France, and America, and England, might be more willing to let the Sandwich Islands fall into the hands of Russia than to see them continue liable to be seized, on some pretext or other, by any one of themselves.

In all this mighty work, whether it be wholly or partly accomplished, our own race will furnish the principal actors. The commerce of this ocean will be ruled and conducted by England, aided and rivalled only by her own republican offspring of America; and the merchants of these two nations, the most enterprising merchants and the most powerful nations that

the world has ever seen, must decide, with a sway greater than that of princes, the destinies of this sea of seas, with its boundless shores and its countless isles. In this respect, the past and the present, as they must strike the most superficial observer, are sufficient guarantees for the future.

But the position of the Sandwich Islands, which I have hitherto considered in its bearings on international intercourse, is not less commanding with respect to fisheries than to commerce. In the upper half of the Pacific there are three principal whaling-grounds, one on the Equator, another near Japan, and the third towards the Russian settlements, while, generally speaking, the same vessels pass, according to the season, from one scene of operations to another. Now, this archipelago, as the hastiest glance at the map must show, could not have been better placed, if it had been exclusively intended by Providence to be a common centre for the whaling-grounds in question; and if, on the intermediate ocean, there be specks superior in mere situation, certainly not one of Nature's other caravanseras, within the assigned limits, has been either so conveniently fitted or so bountifully supplied.

In consequence of these unrivalled advantages, the ports of the group, particularly Honolulu, in a far higher proportion than all the other ports put together, have long been visited by all the whalers of the North Pacific for refuge and refreshment, while they have gradually come to be frequented for ordinary repairs, and also for stores and equipments of every description. It is chiefly with reference to the supply of these civilized wants, that foreign merchants and foreign

mechanics have established themselves in the group; thus forming such a nucleus of local enterprise as is likely to effect a material change, equally beneficial to all parties, in the system of prosecuting the fisheries.

As has already begun to be the case with the adjacent coasts, so has it been with the adjacent waters; in the one instance, as well as in the other, the Sandwich Islands, from being the tavern of the traders, promise to become the entrepôt of the trade. Even now several small whalers are owned in Honolulu; and there can be little doubt that, from year to year, the port in question, like Sydney in the South Pacific, will engross a larger share of the business, storing the oil to be freighted to its ultimate destination. With such an example before them, the whalers in general will be led to separate the two naturally distinct departments of the work, the fishing and the carrying—a division of labour which will be profitable in more ways than one.

At present, the vessel loses at least ten or twelve months in going and coming; and thus a year's interest on the heavy expense of her special outfit is almost literally thrown into the sea. At present, the oil, instead of being sent, fresh and fresh, to market, lies, on an average, half the time of the cruise in the hold; and thus are two capitals hazarded to earn the returns of one, while, in order to aggravate the evil, the dead stock is stowed away in the most costly warehouse in the world. At present, the officers and crew are selected with almost exclusive reference to their skill and boldness in pursuing and capturing the whale; and thus, during a period of perhaps three years, of which at least

a half is not spent in fishing, the owners are obliged to leave their property at the mercy of men, who, to say nothing of the general absence of the higher qualities of a mariner, have undertaken the management rather of the ship's boats than of the ship herself. Surely, the remedying of these defects would be worth a month or so of warehouse-rent and the charges of transshipment.

To conclude this chapter with a brief view of the actual state of trade, there arrived in Honolulu alone, from 1836 to 1839 inclusive, 369 vessels. Of these the whalers amounted to 255, all but five being either American or British. As many of the whalers, particularly when they require nothing but such refreshment as the islands themselves yield, call at other ports, perhaps the annual number of this class of arrivals cannot be estimated at less than a hundred. During the same period, the imports of Honolulu—equivalent, I take it, to the imports of the group—averaged, one year with another, nearly 340,000 dollars at prime cost; and what is to my mind far more worthy of notice than their mere value, they had been brought from the United States, England, Prussia, Chili, Mexico, California, North-west Coast, Tahiti, with other southern islands, China and Manilla. Again, during the same period, the exports averaged, one year with another, about 78,000 dollars of local value, consisting of sandal wood, hides, goat-skins, salt, tobacco, sugar, molasses, kukui oil, sperm oil, the produce of a vessel fitted out from Woahoo, arrow-root, and sundries. All these articles, as may be seen from the qualified description of the sperm oil, were native productions.

But of exports, properly so called, the true amount

differed considerably from the foregoing statement. Under the head of sundries was included little or nothing but supplies of meat and vegetables for the shipping; and, as the head in question amounted, as nearly as possible, to a half of the whole, the exports, in the technical meaning of the word, would be not 78,000 but 39,000 dollars. The exports proper, however, were rapidly increasing. In 1840 down to the middle of August, as compared with the whole of the preceding year, hides, at two dollars each, had risen from 6,000 to 18,500 dollars; goat-skins, at twenty-five cents each, had risen from 1,000 to 10,000 dollars; sugar had risen from 6,000 dollars, at six cents a pound, to 18,000 dollars, at five cents; molasses had risen from 3,000 dollars, at twenty-five cents a gallon, to 7,300 dollars, at twenty-three cents; and arrow-root had risen from nothing, in 1839, the average of the preceding three years having been less than 300 dollars, to 1,700 dollars in the part aforesaid of 1840. To add one particular more to this statement of arrivals, and imports and exports, there were owned in Honolulu, in 1840, ten vessels by foreign residents, seven by American citizens, and three by British subjects; and besides these more considerable craft, which averaged 130 tons, there were five small schooners owned by natives.

Of the imports a considerable proportion, as I have elsewhere stated, is again exported—a feature, by the by, in the trade, which is a more characteristic omen of the future than any amount of internal demand.

Of such imports as are actually consumed in the islands, a considerable share, of course, goes, directly or indirectly, to pay for the native articles of export.

Perhaps about the same amount is absorbed by means of the expenditure of resident foreigners; the missionaries, numbering about forty families in the group, are said, whether they be ministers, or schoolmasters, or surgeons, or secular agents, to receive six hundred dollars a year each, of which every cent must find its way to the shop, to supply either their own wants or the wants of those natives with whom they deal; and all others, of extraneous origin, mustering about six hundred souls in Honolulu and elsewhere, cannot be estimated, as many of them are wealthy, to contribute, either through themselves or their dependants, less than fifty dollars a year each to the coffers of the merchants. Of the latter class, too, there are many individuals, who, in addition to their regular outlay, circulate large sums of money through the instrumentality of native women, who are sure faithfully to squander all that they earn; and, to give a single instance, a young Chinaman, who committed suicide during our visit, was ascertained to have kept up his harem, during the last year of his life, at a cost of five thousand dollars.

Again, the whaling trade accounts, in various ways, for nearly the half of all the local consumption. The vessels themselves cannot spend less than one thousand dollars each on equipments, repairing, and provisions; each crew must add about a fourth to this amount in dissipation of every possible description; and the natives who have served abroad, chiefly in the fisheries, must, in one way or other, get rid of savings nearly equivalent to the sums wasted by all the actual crews. Over and above all this, is to be reckoned part of the consumption among the natives. So far as the common

people are concerned, the greater part of their expenditure has already been included under the foregoing heads; but the king and chiefs, viewed partly as individuals, and partly as the government, cannot derive from sources, independent of any thing that has been stated, less than thirty thousand dollars a year, converting the whole into imports, either for their own gratification, or for the maintenance of the public establishments.

CHAPTER XIII.

SANDWICH ISLANDS, &c.

Troubles with sailors—Visit to Nuannau—Kamchameha's great victory—Wells in Honolulu—Subterranean brook—Idolatrous temple—Cannibalism—Suicide of a Chinese—Chinese and Japanese—Power of false religion to resist truth—Chinese residents—Death of heir apparent—Governor Kekuanaoa's activity—Sitting on hams a mark of respect—Royal mausoleum—Distribution of Kamchameha's bones—Causes of scarcity of children of chiefs—Bickerings of all sorts among foreign residents—More trouble with sailors—Voyage to Mowee—Arrival at Lahaina—Rekeke's hotel—Mr. Baldwin's chapel—Rev. Mr. Richards—King, Haalilio, and John Young—Royal mausoleum—Kekauluohi, the premier—Excellent quarters, with maids of honour as bed-makers—Visit from Messrs. Richards and Baldwin—Queen Kaluma—Visit to the premier along with Mr. Richards—Jack of clubs—Native dance—Swimming of natives, and aversion of foreign residents to bathing—Lahaina, its population and situation—High school—Arrangements for sending a deputation to England, France, and the United States—Haalilio's character and death—King and suite dining on board—Kaluma again, the silent eloquence of her female attendants—Policy of government in managing the aristocracy—Paying farewell visits—Accompanied on board by King and suite—Voyage to Sitka, change of temperature—Mount Edgecumbe—Retrospect of journey, the English race having been dominant every where—Common origin and common destiny of English and Russians.

The very day after our own arrival, the Vancouver, one of the Hudson's Bay Company's vessels, touched at Honolulu, on her way to the Columbia; and, after remaining about a month, she resumed her voyage in the middle of March, carrying with her nearly the whole of my immediate party, Mr. McLoughlin and Mr. Rowand for their respective posts, and Mr. Hopkins for England.

Mr. Hopkins's departure I felt as a serious loss with respect to the keeping of my journal, more particularly as my own eyes were by no means strong ; and, in consequence of this, my subsequent notes were generally rougher and scantier than I could have wished.

When the Vancouver was ready for starting, a scene occurred on board of her which forcibly illustrated, at least in the case of long and distant voyages, the impolicy of the laws for regulating nautical discipline. The boatswain, whose conduct had previously been good, had got intoxicated immediately on entering the port, and, after being absent for some time without leave, had been brought on board by the police ; but, refusing to do his duty, he was again sent ashore, and confined in the fort. When the vessel was ready for sea, he was brought out to her in irons, under the immediate charge of the British Consul. While he was yet in the boat, he attempted to strike down Mr. Charlton with his manacles ; and, when he reached the deck, he threatened, to say nothing of his disgusting obscenity, that, if carried away, he would excite a mutiny. His violence, which, in fact, amounted to temporary insanity, elicited a murmur of applause from the crew ; and, as it was out of the question to admit such a fellow among such comrades without the power of inflicting adequate punishment, he was remanded to the fort, to be dealt with as the Consul might deem necessary or expedient. As might have been expected, this example, however inevitable, of yielding to the demands of one man, led to subsequent acts of insubordination on the part of the others. In the present state of the law, the master, particularly with all the

chances of misrepresentation against him, is never safe in proceeding summarily against an offender. The men act accordingly, unless they know that they are within easy reach of a ship of war or of a court of justice; and thus the very statute, which is intended to prevent mutiny, not unfrequently encourages it. All these defects of the law are aggravated by the notorious fact, that British seamen are the most unmanageable in the world.

After the departure of the Vancouver, I accompanied my friend, Mr. Pelly, to his rural retreat in the valley of Nuannau. The change of temperature, within a distance of four miles of gentle ascent, was very remarkable, so that, at our journey's end, we found a change from light grass-clothing to warm pea-jackets highly acceptable. Mr. Pelly's residence was a snug little cottage, surrounded by a great variety of tropical plants, particularly by beds of pineapples and miniature plantations of coffee. In fact, the gardens of the residents generally contain rich displays of almost every flower and shrub under the sun—orange, lemon, citron, lime, pomegranate, fig, olive, gooseberry, strawberry, squash, melon, grape, guava, tomata, batata or love-apple, yams, sweet potatoes, with many other fruits, and all sorts of esculent vegetables. To notice one or two of the rarer specimens, a very large variety of melon produces a most gorgeous flower, far more beautiful and elaborate than even the *passiflora* in Europe, and the *papia* causes so rapid a decomposition in meats, that the toughest beef, or the most venerable of old cocks, if steeped in an infusion of the fruit or the stem of the plant, becomes in a few hours perfectly tender. In

addition to all that I have just enumerated may be mentioned the prickly-pear, the oriental lilac, the date-palm, the camphor-tree—in short, nearly all the plants of all the groups of Polynesia; and in order, if possible, to extend the catalogue, Mr. Hopkins left in the hands of one of the most persevering horticulturists some seeds of the cherry and apple, which he had brought from England.

At the head of the valley, distant but a few miles from the house, a *pali*, of one thousand one hundred feet in height, overhangs the windward side of the island. I had intended to ride to this precipice in the course of the afternoon, but was prevented by the heavy rain; our time, however, was spent very agreeably in receiving visits from many of the neighbouring natives. Next morning, though the rain continued to fall as heavily as ever, and the clouds and mist were driving down the gorge before the trade-wind, I was trotting away, at dawn, in the very teeth of the storm.

The scenery of Nuannau is strikingly picturesque and romantic. On looking downwards, the placid ocean breaking on the coral reefs that gird the island, the white houses of the town glancing in the sun, the ships lying at anchor in the harbour, while canoes and boats are flitting, as if in play, among them, form together a view, which, in addition to its physical beauty, overwhelms one, who looks back to the past, with a flood of moral associations. In the opposite direction, you discover a rugged glen with blackened and broken mountains on either side, which are partially covered with low trees, while from crag to crag there leaps and babbles many a stream, as if glad and eager to drop its fatness,

through its dependent aqueducts, on the parched plain below. Nor is the view in this direction destitute, any more than the view in the other, of historical interest. It was up this very pass that Kamehameha, after gaining, as already mentioned, his last and greatest battle, chased with "his red pursuing spear" the forces of Woahoo and his own recreant followers who had joined them, till he drove them headlong, to the number of three hundred, "death in their front, destruction in their rear," down the almost perpendicular wall that terminates the valley.

On arriving at the *pali*, I saw, as it were, at my feet, a champagne country, prettily dotted with villages, groves, and plantations, while in the distance there lay, screened, however, by a curtain of vapours, the same ocean which I had so lately left behind me. Though the wind, as it entered the gorge, blew in such gusts as almost prevented me from standing, yet I resolved to attempt the descent, which was known to be practicable for those who had not Kamehameha to hurry them. I accordingly scrambled down,—having, of course, dismounted,—for some distance; but, as the path was slippery from the wet, I was fain to retrace my steps before reaching the bottom. In all weathers, however, the natives, when they are coming to market with pigs, vegetables, &c., are in the habit of safely ascending and descending the precipice with their loads.

While I was drenched on this excursion, the good folks of Honolulu were as dry and dusty as usual, the showers having merely peeped out of the valley to tantalize them. For domestic use, in spite of the prevailing droughts, Honolulu is plentifully supplied with water.

Wells, varying in depth from thirty to eighty feet, cost very little in digging by reason of the peculiar formation of the soil. This consists of a layer of mould, from two to six feet in thickness, then of a similar layer of black sand, and lastly of a deep bed of coral. When first worked, the coral is found to be quite soft, and is cut with the same ease as stiff clay; but, when exposed to the air, it becomes like rock, thus forming walls of better masonry than a workman could lay down. Under ground, in fact, fresh water appears to be remarkably abundant. A few years ago, in the operation of digging for a well, a crowbar, when pushed into the bed of coral, suddenly disappeared; the opening was enlarged, and found to communicate with a subterranean brook of pure and cool water, flowing with a swift current in the direction of the sea. This brook is said to be about fifty feet wide, and from two to six fathoms in depth; but, beyond these particulars, nobody has had curiosity enough to inquire into the source or the mouth of this mysterious stream.

Before I say anything of my voyage to Mowee, to which the regular course of my journal has now brought me, I shall offer a few desultory remarks on Honolulu and its neighbourhood, such as did not fall under any of the heads of my last two chapters.

On the slope of an extinct volcano, which is about four miles from the town, are the ruins of one of the temples of the ancient idolatry. An area of about two hundred feet by about fifty is surrounded by a wall of eight or ten feet in height and six or eight in thickness, built with extreme neatness of loose blocks of stone, lava, and coral. In this enclosure are the remains of

three or four small squares for the altars, within which the bones of victims are said to be still plentiful. The longer sides of this temple look to the north and south, all the altars standing, or having stood, near the western end. In addition to the human sacrifices, these temples, according to general testimony, were the scene of cannibalism, which, as well as the preparatory murder, is believed to have been a religious rite. Whether the devouring of men was always of a sacred character, one may be allowed to doubt ; but that it sometimes was so, we must infer with certainty from the fact that, when the assembled chiefs were consulting how they could best honour the mortal remains of Kamehameha, one of them propounded his opinion to the effect, that they should "eat him raw." Taking this proposal, by the by, as a sample of the manners of 1819, civilization has undeniably made rapid strides in this archipelago. The merit of the change is quite large enough to satisfy the just pride of both merchants and missionaries.

During our stay, we had a specimen of the working of a different system of paganism in the suicide already mentioned of a young Chinaman. This practical atheist had hanged himself, to make assurance doubly sure, with a rope of an inch and a half in thickness. The malady is a national one, — an instance of its obstinacy having occurred in our own service on the north-west coast. A Chinese steward on board of one of our vessels, getting sick of life, jumped overboard while the ship was under full sail. As he was too expert a swimmer to sink on any terms, he held down his head, as if he hoped to get waterlogged ; but, before he could drown, he was picked up by one of the boats. On reaching the

deck, he merely grinned, saying, " Make muchee cold," and forthwith proceeded to lay the cloth for dinner. But where there is a will, there is a way ; and the fellow was subsequently fortunate enough to drown himself in the Columbia River.

But to return to Honolulu. The unhappy youth, having inherited a considerable property from a brother who had died in Mowee of the same distemper, had at once rushed into an extravagant course of life, carrying the passion of his race for gambling to a characteristic extent, and maintaining, in addition to a lawful wife, a whole nest of houris at a ruinous expense. It was this last circumstance that led to his death. The police, having got evidence of his amours, threatened to bring him up before the court ; and, in order to avoid the exposure, he destroyed himself. No sooner was his corpse laid out on the floor, than his bereaved favourites, howling their lamentations over him in dismal strains, endeavoured to shampoo him back into life ; but he was too far gone for that, and was buried the same afternoon in the Protestant ground, while a dense crowd followed him to the grave with a hired band of music, which had all day formed a curious accompaniment to the wailing of the women with the cheerful notes of the pipe, and cornet, and drum.

This scapegrace was in partnership with Hungtai, already mentioned ; and the old gentleman, whether it was that he was proud of his countryman's stoicism, or that he was glad to have got rid of so unserviceable an associate, had no sooner seen the body committed to the earth, than he returned home with a smiling countenance, and whiffed off all recollection of his friend in

a pipe of opium. Among those by whom suicide is regarded as one of the ordinary outlets from this world, sympathy of any sort is not to be expected; for how can a man, who does not value his own life, value another's? and how can a man, who does not deplore the death of a neighbour, deplore any of his lesser misfortunes? To return to the subject of the deceased spendthrift. His example seemed to be contagious in his harem, for, within a few days, his favourite mistress followed him, by drinking a decoction of some pieces of old copper.

Of the Chinese, there are altogether about forty in this archipelago, as they are, in fact, scattered, wherever they can earn a livelihood, over a hundred degrees of longitude, from Woahoo to Sincapore. As distinguished from their Tartar masters, the people of China are not the bigoted enemies of foreign intercourse that they are supposed to be; they are, on the contrary, ready to go abroad either as residents or as wanderers, combining the laborious habits of the Irish with the peddling disposition of the Jews. In this respect, they are remarkably different from the Japanese, who, even when they find themselves from home, with hardly the hope of returning, can think of nothing but their native land.

This was eminently the case with the two little bands that were driven, as elsewhere stated, to the shores of this group. Notwithstanding all the kindness that they experienced, particularly from the missionaries, they pined for their own islands, the young as well as the old, the single as well as the married. One of their remarks, by the by, forcibly shows how beneficial the previous abolition of the idolatry of the group must

have been to the teachers of Christianity. When pressed on the subject of religion, the poor exiles replied, with equal pathos and firmness: "The gods of America may be good for Americans, but the gods of our country are good for us." Though, in their case, the desire of revisiting the place of their birth may have rendered them less willing to abjure the faith of their fathers, yet a similar feeling cannot, to the same extent, affect the Chinese residents; and yet every one of them says, every day of his life, if not in words, at least in effect, that his own creed is the best for him.

Most of the Chinese residents have originally come to the islands under engagements of some kind or other, gradually establishing themselves in business as opportunities occur—two industrious fellows, in particular, of the name of Sam and Mow, having recently opened shop as bakers, with a poetical advertisement worthy of "Hunt's Matchless," or "Warren's Blacking." Generally speaking, they are found to be a great acquisition in the factories and the stores, and, moreover, make very excellent servants. They are satisfied with moderate wages; and, living, as they do, principally on rice and vegetables, are maintained at little cost; and, what is better than all, they are honest, patient, and cleanly. Those who are employed as shopmen, keep their accounts with a wonderful degree of exactness, making all their calculations by means of an abacus. Nearly all their valuable qualities are confirmed and illustrated by the following instance.

Some years back, my informant had sent two Chinese from Honolulu to Mowee, in charge of a cargo to be sold by retail. On closing the transaction, at the

end of several months, they handed to their employer an accurate account of every cent that had passed through their hands; and, though the amount of sales exceeded forty-five thousand dollars, yet the expenses of both the men had averaged something less than half a dollar a day between them. Their good conduct, of course, did not go unrewarded. One of them remained in the islands, with every prospect of doing well, while the other was sent back, a rich man, to his own country, where, doubtless, his wealth would operate as a premium on emigration.

Another death, of a person of greater consequence than the young spendthrift, occurred also during our visit. A vessel, with her colours half-mast high, arrived from Mowee; and soon afterwards the great flag of the fort was displayed in the same ominous manner, betokening, for the information of the liegés, the death of some member of the royal family; and Rumour, with her thousand tongues, forthwith ran about, whispering that the heir apparent, just as his elder brother had been before him, had been summarily put out of the way of the more favourite line of the late Kinau, daughter of Kamehameha and wife of Kekuanaoa. However this might be, the national ensign drooped for three days, young Liho Liho again became heir-presumptive to the throne, and Kekuanaoa himself walked about as if nothing particular had happened.

The old governor, by the by, is always on the move, and that, too, to some purpose, for he is really as intelligent as he is active. From morning to night he pays visits, or boards the ships, or attends his hall of justice, always accompanied, as I have elsewhere hinted, by his

body-guard of amazons. In the proceedings of his court, one peculiarity struck me as indicative of the consistency with which the customs even of savages must have been observed. In the presence of Excellency, all the natives used to evince their respect, not by standing on their feet but by squatting on their hams—a practice which may be easily and satisfactorily explained. As the chiefs were almost uniformly taller than the people, it was the most natural thing in the world for servility, on the one hand, or for pride, on the other, to establish a sitting posture as the proper attitude of an inferior; and, in fact, so rigorous was the etiquette on the subject of corporeal eminence, that, while Kamehameha was in the cabin of any ship, his very chiefs, even the second ruler in his kingdom, did not dare to tread any part of the deck that could possibly be over his royal head.

Speaking of Kinau, I had the honour of entering the royal mausoleum on the occasion of my visiting the high school, which is not inappropriately situated within the same enclosure. The last home of the great of these islands is a small edifice of stone, already containing five coffins, those of Liho Liho and Kamehamalu, brought from England with their contents, and three others, equally rich and elaborate, manufactured on the spot. The coffin of Kinau, or Kaahumanu II., was elevated on a frame and screened by silk curtains; and Kekuanaoa drew back the elegant hangings which veiled the remains of his wife and one of his children, with all the coolness of a professional showman. The bodies, besides being embalmed, are enclosed in lead, which again is carefully soldered; but, notwithstanding these precautions, the lid of Liho Liho's coffin has been warped

by the gases escaping from within. The remains of the founder of the family are not to be seen in this building. Though his body was not eaten raw, according to the suggestion of one of his admirers, yet it was boiled till the flesh fell from the bones; and then the bones were distributed among the chiefs, with a due regard to the mutual jealousies of the aristocracy, the skull going to one, a rib to another, and perhaps the tip of a finger to a third.

Of all the chiefs of the first rank, Kekuanaoa alone has a tolerable number of children. Women so enormous in size as most of the female grandees are cannot possibly be prolific; and even when they become mothers, they take nearly as little care of their offspring, without the excuse of poverty to palliate their want of affection, as the humblest females on the islands. As an instance of this, Kamehameha and Keopuolani, both as healthy as horses, had thirteen children, of whom only three, Liho Liho and the present king, with his late wife, survived their father. The women of the Sandwich Islands can bear children, if they will; and the children will live, if they can. During my visit, there was living on Woahoo a woman of twelve years of age, who had already presented to an English husband three thriving pledges of connubial love.

Before concluding this record of our proceedings at Honolulu, I cannot but acknowledge the kindness and courtesy that we experienced from all the foreign residents of respectability, missionaries as well as merchants, during the whole of our sojourn. Our pleasure, however, was sadly marred by an undisguised want of cordiality among those who were so hospitable to ourselves.

The merchants and the missionaries are, generally speaking, on barely decent terms with each other. The missionaries live in a part of the town by themselves, a Goshen in the midst of Egypt, seldom associating with the laymen, and never visiting them; while the merchants have not yet forgotten certain clerical proceedings directed against their amusements. In justice, however, I ought to state, that the feud had begun before the parties ever met. In 1820, all the foreign residents, with the single exception of John Young, endeavoured to persuade the chiefs to prevent the missionaries from landing; and the missionaries, if the truth were known, had doubtless been imbued with much uncharitable prejudice against the mercantile pioneers of civilization, by their exclusive views of religion. Unfortunately, the relation of pastor and flock was perverted to the widening of the breach; for some of the more violent among the reverend brethren sometimes so far forgot themselves as to rail against individual whites from the pulpit, in terms not to be misunderstood. Partly in consequence of this indiscretion, and partly from a preference of English to Hawaiian, nearly all the Protestant residents attend the Seaman's Chapel, which is distinct from the other churches, and has a minister of its own. During our stay, however, the missionaries did officiate there, inasmuch as Mr. Diell, the late chaplain, was dead, and Mr. Demon, his successor, had not yet arrived.

Again, between the government and the merchants there is generally some ground of difference or other, over and above the general fact, that the authorities are always more or less identified with the missionaries.

The government has not only to maintain its own cause against every white who may imagine his interests to be injured or his dignity to be insulted by any legislative, or executive, or judicial measures; but it is worried to interfere in every squabble that takes place between sections or individuals of the mercantile community, being sure to be abused at least by one party for its interposition, or perhaps by both for its neutrality.

Then, again, among the merchants themselves, there is no imaginable limitation of the sources of discord. The Americans and the British pit themselves against each other as desperately, as if the dignity and power of their respective countries could be enhanced or diminished by the rancour of a few traders in the middle of the North Pacific, while the French and the Mexicans, and all the second-rate factions, throw their weight sometimes into the scale of one of the first-rates, and sometimes into that of the other. For some years back, moreover, religion has been nearly as formidable a wedge in society as politics; but, in the controversy between Catholicism and Calvinism, the French and Mexicans are the principals on the side of the former, while, through hatred of the latter, or, rather, of its organs, individual Britons and Americans have espoused the same cause in the character of auxiliaries.

In many cases, however, politics and religion are merely a cloak thrown over more sordid and unworthy motives. Rivalry in trade often lurks at the root of the evil; and, in a small community, this jealousy in business, instead of being frowned down and borne away, as is the case in larger societies, by public opinion, is

caught up and imitated by the interested individual's partisans and retainers, thus ripening into the badge of a clique or coterie. The social result of the whole is this, that the one half of all the strangers in this strange land are not on speaking terms with the other, while every now and then there springs up some unforeseen trouble, to make the friends of to-day the enemies of to-morrow, or the enemies of to-day the friends of to-morrow, either as principals or as auxiliaries.

In this universal war of partisanship, a house is not unfrequently divided against itself, for the wives do not always choose to veer about with the husbands in all the little matters of familiar intercourse. Mr. A. and Mr. B., from having been on doubtful terms, are now great allies, though Mrs. A. and Mrs. B. still adhere to the old system of non-intercourse. Mr. C. is the sworn friend of Mr. D., but won't speak to Mrs. D., while Mrs. A.'s mother visits Mrs. D., but won't notice Mr. D. In this manner the whole place is cut up into such minute subdivisions, that a visitor is perfectly at a loss how to act, being almost afraid to mention where he has been or whither he is going. How inferior, in this single respect, is Honolulu to California in general, and to Santa Barbara in particular.

This belligerent spirit often leads to serious litigation, forcing into court cases, which, in a different state of feeling, would be settled amicably by the parties themselves. During my short stay, I was, I believe, useful in adjusting some of these differences. In an action, which involved claims to the amount of about fifteen thousand dollars, I had the honour to be foreman of the jury; and I subsequently had the high satisfaction of

terminating, as arbitrator, a dispute of nearly equal importance, which, for a whole year, had been a grand bone of contention between the claimants and their respective parties.

Though all these divisions of the whites are indirectly a safeguard to the government, yet, when they assume the form of litigation, they seldom fail to place it in a very unpleasant predicament, for, while one party may be forcing a question on the consideration of the local authorities, the other party perhaps denies their jurisdiction, and swaggers and threatens away about appealing to his own country for redress.

My prayer is, that the residents of all classes and denominations may strive to heal all their petty divisions, remembering that not only to their own real interests, but also to that great cause of civilization and Christianity which Providence has committed to their charge, "Union is strength—discord, ruin."

To resume my journal. I returned to town immediately after visiting the *pali*, intending to take my departure for Mowee on the following day. The Cowlitz, however, proved to be as hard to move as the Vancouver. Many of the sailors, with the second mate to countenance them, were so intoxicated as to be unfit to proceed to sea; four fellows were confined in the fort for various offences, and one had absconded. Such conduct is unfortunately too common on the part not only of the men, but also of some of the officers, of foreign ships in general. Being the grand source of disturbance in the otherwise quiet town of Honolulu, it sets a bad example to the natives, and lowers the whites in their estimation, besides giving rise to such profligacy

as tends powerfully to neutralize the labours of the missionaries.

Meanwhile, I occupied my time by conferring with Kekuanaoa and Dr. Judd on affairs of state, more particularly on the subject of taxation. The doctor, as I have already mentioned, was to be appointed treasurer, and would probably have to act as chancellor of the exchequer. The crew of the Cowlitz having been at length mustered and sobered, we left Honolulu, accompanied by Mr. Charlton and Mr. Pelly, on Thursday, the 17th of March, under a salute from the fort, an honour never before paid to any but vessels of war. During our voyage, which occupied three days, the weather was close, damp, and disagreeable, without anything to vary the monotony, excepting the squeamishness of some of our passengers. We did, however, see a few whales, both sperm and right, besides many young sharks; but, young as the sharks were, none of them were such greenhorns as to take the bait, though they followed the ship for several hours at a time.

The channel between Molokoi, on the left, and Lanai, on the right, through which we had to pass, is narrow, being at some points only seven or eight miles in width, with a current of three knots. It requires all the attention of navigators; but, on the present occasion, our captain was much distracted and annoyed by some amateurs of our party, who, cloaking a great deal of nervousness under an appearance of public spirit, remained on deck, in order to give him their valuable advice.

On the evening of the 19th, we came in sight of the roadstead of Lahaina; but, as both wind and tide were

against us, we could not fetch the anchorage that night. Next morning, however, we were all snug by six o'clock, and found ourselves in company with nine American whalers, and our old friend Captain Cooper, who had just arrived from Acapulco in his cranky schooner, but brought no news.

As soon as convenient after breakfast, we went ashore. The first house that we entered was that of Rekeke, commandant of the king's body-guard, who had, in imitation probably of the majors and colonels and generals of the United States, opened his mansion as a tavern, for the accommodation of the public; but here we could not stop, for, besides hosts of flies and vermin, we found several whaling skippers and mates carousing in a style which did not exactly suit our fancy.

On proceeding from Rekeke's to the "Bethel," I was glad to see that most of the whaling folks had preferred the church to the hotel, for there were present in the chapel twelve or fourteen officers and about twenty sailors. The preacher was gesticulating with considerable vehemence, while beneath him sat the Rev. Mr. Richards, who, with that ardent zeal and primitive simplicity which characterize him, did not disdain to act as clerk to his former colleague, to be "a door-keeper," as it were, in the House of God. If the reverend orator had got hold of Rekeke's guests at their orgies, instead of the decent men that had come voluntarily to a place of worship, he could not have pelted away more unmercifully at his hearers, setting them down as the greatest sinners under the sun; and then, with a hit at smooth-tongued preachers, triumphantly adding, that his system was to tell the truth, the whole

truth, and nothing but the truth. He was doubtless zealous, and meant well; but his exhibition seemed to me to be peculiarly worthy of record, as furnishing a clue to much of the dislike entertained by the traders towards the missionaries.

At the conclusion of the service, I was introduced to the Rev. Mr. Richards, and found him to be as shrewd and intelligent as he was pious and humble.

From the chapel we went to the palace, which, like some other residences of royalty, is badly situated, occupying a low spot among stagnant patches of the *kalo*. The sentries on duty, who were neatly dressed in white uniforms, saluted us as we passed; in point of stature and carriage, they would have borne a comparison any day with our finest grenadiers.

At the entrance, we were met by the king, accompanied by Haalilio, his secretary, and Keoni Ana, chamberlain of the establishment and governor of the island, all three wearing the Windsor uniform, and appearing to be much about the same age, probably under thirty; Kaui Keaouli is very dark; he is, however, good-humoured and well formed, and speaks very tolerable English. Haalilio, who is since dead, had a countenance of considerable intelligence, and, to my personal knowledge, did not belie his looks in that respect. *Keoni Ana*, according to the principles of enunciation as developed under a former head, is the Hawaiian disguise for John Young, the present bearer of the appellation being son and namesake of the common sailor, whom Kamehameha elevated, as a monument of the immeasurable superiority of the rudest civilization over every form of savage life, to be governor of his native

island, and viceroy of all his chiefs. If inferior to his father in mental qualities, Keoni Ana possesses a good face and handsome figure. The three companions welcomed us with a cordial shake of the hand, and expressed their gratification at seeing us; they were fluent in their elocution, and easy and graceful in their manners.

His majesty offered us everything which he deemed conducive to our comfort, horses, servants, boats, &c.; and, after joining in a glass of wine, we were conducted by him to visit a kind of rival of the grand mausoleum in Honolulu, the tomb of his mother, who was one of the very earliest converts to Christianity, his first wife, who was also his sister, and his three children, all deposited in handsomely-mounted coffins of native manufacture. The conversation turned on fifty different topics, in which the king was likely to take an interest, such as railroads, swimming, dancing, riding, &c., and the whole of us speedily became excellent friends. At parting, his majesty engaged to bring his two comrades and other principal authorities to dine on Tuesday on board of the Cowlitz.

We now adjourned to a half-finished and ill-furnished stone house in the fort, to pay our respects to the premier, who, in power and rank, is next to the king. Kekauluohi, more popularly known as the "Big-mouthed Queen," for she is one of Liho Liho's dowagers, possesses at least two of the ingredients of "fat, fair, and forty;" and, as she was too unwieldy to move from her couch without a good deal of trouble, she received us gracefully in a recumbent posture, and made herself very agreeable. Her female attendants, who were all of the

class of chiefs, surpassed other maids of honour as much in affability as in bulk; for, as we all sat promiscuously on the thick matting which covered the greater part of the room, each lady, with perfect nonchalance, proceeded to shampoo the gentleman who sat next her. As a mere matter of form, for it could not be anything else, I asked the huge premier to dine on board of our vessel with his majesty.

After eating, or trying to eat, a wretched dinner at Rekeke's hotel, we strolled about the town, which, unlike Honolulu, presented scene after scene of drunkenness and debauchery, with several ladies among the actors.

At night, we had excellent quarters prepared for us; and three of the premier's maids of honour, of whom the smallest must have weighed upwards of twenty stone, came in the evening, with a plebeian retinue of their own sex, to perform the ceremony of making our beds. Our residence, the property of Kekauluohi, was a house of two stories, built of stone, and well furnished, with a gallery or verandah in front. The upper floor was divided by means of partitions, screens, and curtains, into three apartments, a dining-hall and two bedrooms, the latter being provided with piles of mats and other conveniences for repose, covered with musquito nets. After the labours of the three ladies of quality, we might be supposed to have passed a pleasant night. But the sheets of *kapa*, though cool and agreeable, crackled and rustled at our every movement; and this fretting noise, combined with the unremitting attentions of myriads of vermin, disturbed, in no small degree, the night's repose. A refreshing bath in the morning, how-

ever, served to remove the effects of a restless night ; while, on my return from the beach, I was glad to find that we were no longer to depend on Rekeke's tender mercies.

An excellent breakfast had been prepared for us by order of our royal hostess, who, for our future comfort, had farther sent us a cook, and half-a-dozen other attendants, with all requisite supplies.

This morning I received an early visit from the Rev. Mr. Richards, accompanied by the Rev. Mr. Baldwin, whose performances we had heard at "Bethel." The former, by referring to a letter which he had received from Dr. Judd, at once placed us on a confidential footing. He complained loudly of the overbearing conduct of the British and French consuls, adding, that letters on the subject had been written to Queen Victoria, but had not been answered ; and, at his request, I undertook to become the bearer of farther despatches.

In the course of the forenoon, I repeated my visits to the premier and the king, by both of whom I was most graciously received. With his majesty Kamehameha III., I found several of his officers of state assembled, Haalilio and Keoni Ana, already described ; Kewini, governor of the fort ; and Rekeke, commander of the forces. On this occasion, I had the honour of being introduced to the young and pretty queen, who, from the effects of her late confinement, and still more, perhaps, through grief for her premature bereavement, was still lying on her couch of matting. Kaluma, as I have elsewhere mentioned, is daughter of Captain Jack, who, in his capacity of admiral of the fleet, accompanied the late king and queen to England. Like

Keoni Ana, Kaluma is the Hawaiian disguise for part of our vernacular, being formed of *ka, the*, evidently, by the by, one and the same word, and *luma, rum* ; and this somewhat undignified name for a queen may, perhaps, be regarded, on the principle of association of ideas, as a proof of her having been the old tar's favourite child. The royal couple appeared to be devotedly fond of each other ; and, though her majesty has no ostensible share in the government, she must exercise, I apprehend, a good deal of irresponsible influence.

I was invited by the king to attend a social entertainment in the evening ; but, learning that his majesty had, during the day, been enjoying himself with some of Rekeke's whaling friends, I excused myself, when the hour came, on the score of indisposition.

At night, I again visited the premier by special appointment, accompanied by Mr. Richards. We entered the fort after dark by the postern gate, where the sentries, evidently expecting us, permitted us to pass without challenge ; and we were then conducted into the house by a fellow resembling, in office and demeanour, the mutes of an oriental harem. We found Kekauluohi in a large antechamber, at the door of which were stationed two sentries, while, in an adjoining room, were several large women, most probably our ladies of the bedchamber being of the number. The enormous queen, to whom poor Kanaina, her husband, is a mere spare rib, received us, as before, in a recumbent posture, and forthwith began to discuss, without reserve and with considerable acuteness, the affairs of the government. At the close of our interview, which lasted from eight o'clock till midnight, we parted, the

best friends imaginable ; and the premier, having first got me to plead guilty of matrimony, made many inquiries about my wife and young folks, promising that, if I would bring them to the Sandwich Islands, she would have a house erected for us better than either she or the king possessed.

Huge as the premier is, she is decidedly surpassed in weight by one of the ornaments of her court, the wife of our old friend Kealiiahonui ; and, whatever Shakespeare or anybody else may say to the contrary, true nobility in this archipelago is rather of the body than of the mind. Kealiiahonui himself weighs about twenty-five stone, while his stupendous consort scores off nine pounds and a half more in her *pau*. To make the acquaintance of so great a personage, who is familiarly known as the "Jack of Clubs," was, of course, a thing much to be coveted ; but, on calling at her residence, what was my distress to find that she and some other aristocratic dames had started off in two double canoes, with twenty or thirty followers, for the island of Molokoi, there to enjoy a little pleasant relaxation from the dry toils of public life. To compensate me for my disappointment, I was introduced to twelve or fourteen interesting girls, maids of honour, or perhaps of all work, who had been left at home as too young to participate in the present convivialities.

On the afternoon of Monday, we went to see a native dance, which was to be got up with more than ordinary care and ceremony. The ball-room was in a long building, the walls of which were formed of thick mats ; and the centre of the apartment was appropriated to the performers, while all round were placed seats for

the accommodation of spectators, a very conspicuous place being reserved for my party. The musicians, almost all old men, were seated on their heels to the number of eighteen, beating time to their song on large double calabashes, which were attached to their left wrists; the music was wild, but by no means destitute of melody, while the words, as we were informed, referred to the conquests of Kamehameha, to the nuptials of the present king and queen, and to the birth and death of the boy of whom they had just been so suddenly deprived. The performers, having each to attend both to the vocal and the instrumental departments, were soon perspiring at every pore; still, they did their double work admirably, and kept excellent time.

Then followed a dance of a truly indigenous description between three lads and as many girls; and next came a *pas seul*, executed by a youth, whose elegance, activity, and pantomime, surpassed anything of the kind that I ever witnessed at our own theatres. This fellow's dress was light and tasteful, consisting of a tiara of feathers and flowers, of necklace, bracelets, and anklets of shells, of the perpetual *malo*, and of leggings, adorned with various devices in shark's teeth, which made a rattling sound in unison with his motions.

In spite of all the good premier's endeavours to make our quarters comfortable, I passed another restless night in her house, having been well nigh eaten up alive by fleas and other vermin; and I anxiously watched the approach of daylight, that I might be able to bathe my countless wounds in the sea. A stranger can scarcely form an idea of the luxury of a bath in these warm regions, where both air and water are of nearly equal tempe-

rature ; and yet, curiously enough, foreigners, who have resided any time, seldom or never bathe, appearing to entertain even an aversion to the sea through a dread of catching cold, and so on ; and thus neglecting, through groundless fears, a practice which is the best antidote to the enervating influences of a tropical climate. As to the natives, they may almost be said to be born swimmers ; for they actually take the water before they leave the breast. At Lahaina, in particular, I was highly amused with the early development of this innate talent. Through the town, there runs, or rather creeps, a sluggish streamlet, into which urchins, that were hardly able to stand, used to crawl on all fours ; but, no sooner did they gain the congenial element, than they struck out like young fish, diving, and ducking, and performing a variety of feats with confidence and ease.

After breakfast, I took a ride round Lahaina, where there is a population of about 5,000 souls, a little more perhaps than half the population of Honolulu. Though the place has nothing of a harbour, excepting an open roadstead lying on the outside of the reef, yet it is a good deal frequented by those who desire refreshment alone, in consequence of provisions being cheaper here than in the commercial metropolis. The situation of the town is by no means agreeable, being low and flat, while the neighbourhood is beset by marshes and stagnant pools, which send forth a very offensive perfume. Still the locality is considered healthy. I was glad, however, to learn from the king that he intended to drain the marshes and pools, and to remove his own residence from its present dull, low, damp situation, to a more airy and

conspicuous position, overlooking the roadstead. The houses at Lahaina are neither so well built nor so comfortably furnished as those of Honolulu; and both men and women seem to have been more contaminated here by their intercourse with whites, many of both sexes speaking our vulgar tongue, in its grossest and most offensive terms, with great fluency. The people of Lahaina are, moreover, evidently addicted to liquor, whereas, at Honolulu, I did not, during the whole of my stay, observe a single instance of intoxication among the natives.

In the course of my ride, I visited the high school, a substantial building, well situated on the face of a hill above the town. At this establishment, which I have already mentioned as being entirely under the management of the missionaries, there are about a hundred youths, varying in age from eight to twenty years; and a large printing-office, attached to the seminary, is constantly employed in publishing periodicals and books, partly written by natives, besides engravings and lithographs made by the pupils. The boys are comfortably lodged, two in a room, are well fed on their favourite *poi*, with a small seasoning of fish and meat, and are clothed,—quite sufficiently in so warm a climate,—in a shirt and the *malo*. The youngsters contribute in a small degree to their own maintenance, by devoting about two hours a day to agricultural and other labour; but their condition, contentment, and conduct evidently show that, so far from being overworked, they are kindly and liberally treated.

Hitherto, as I have elsewhere mentioned, no other language than their own is spoken or studied; English,

however, is intended in due time to be introduced, now that the intercourse with Great Britain and the United States has become so extensive. Such of the young men as may evince a religious turn of mind are to be sent forth as missionaries ; if moral, but not religious, they are to be employed as schoolmasters ; and if neither religious nor moral, they are taught trades, and allowed to go free whenever they are so inclined. The teachers appeared to be steady, intelligent, and respectable persons, and to be well qualified for their arduous and important tasks.

The hour for the entertainment of royalty now approached, but his majesty proved to be indisposed. The big-mouthed queen of course did not come, any more than the mountain came to Mahomet ; but still our table mustered Haalilio, Keoni Ana, Kewini, Mr. Richards, Mr. Charlton, Mr. Pelly, and my own immediate party. After dinner, which was a highly creditable affair, we all returned on shore ; and at nightfall Mr. Richards and myself again repaired, by special appointment, to the premier, to have another conference of three or four hours on politics ; while Mr. Charlton, partly from curiosity, and partly from a suspicion of treason, was rendered quite restless and unhappy by being excluded from our confidence.

Next morning, I called on Mr. Richards, to peruse some papers preparing for England, which were to be put under my charge. At noon, the papers in question were submitted to the king and premier, who then decided that, agreeably to a suggestion of mine, Mr. Richards should proceed to England as envoy, being for this purpose associated with the governor and deputy-governor of

the Hudson's Bay Company and myself; and that we should have authority to make arrangements on behalf of the Hawaiian government, not merely with England, but also with France and the United States. Haalilio, according to a subsequent arrangement, accompanied Mr. Richards. This native chief attracted much attention in London, on account of his gentlemanly bearing and amiable disposition. But, in his case, as in that of Liho Liho and Kamehamalu, an ungenial climate soon did its work. Though he made his escape from England without having sensibly impaired his constitution, yet in the winter of 1843-4 this enlightened son of a barbarous race died on his homeward voyage, a few days after leaving New York, the commercial metropolis of the country which had been mainly instrumental in rendering him what he was. He had caught cold, as there was reason to believe, while visiting me at Lachine in the previous autumn; and within a few days before his embarkation, I felt grieved at seeing him with his doom written on his manly countenance.

I spent the greater part of the afternoon in company with the king. His majesty and suite dined with us on board of the Cowlitz, where we had a very convivial party of about twelve. In the evening, I visited Kaluma, for whom I felt a lively concern; she is said to possess strong affections and many amiable qualities, while the suspicion with respect to her infants, more particularly as it is cherished by herself as well as by the world, could not fail to render her an object of interest and commiseration. She was attended by several female chiefs of high blood, among whom was the wife of the gigantic Paki. Of these women there are but few who

speaking English ; nor, indeed, are tongues essential to render those agreeable, who are such perfect mistresses of the language of the eyes. Even among themselves, I have watched the native belles, I might almost say by the hour, while they were carrying on an animated conversation in dumb show ; and, whether it was that the teachers were apt, or the task easy, or the pupil docile, I found that even a perfect stranger might be made to understand and practise the art after a single lesson.

From all that I have observed, I cannot help thinking that a good deal of profound policy is displayed by the executive in the management of the chiefs. Kamehameha, as is well known, kept his grandees as much as possible under his own inspection, more particularly if they were supposed to be disaffected ; and Kekauluohi and Kekuanaoa, the parties most deeply interested in the succession of Kinau's line, have contrived to improve on the great conqueror's plan by means of a division of labour, the latter holding fast the husbands, and the former monopolizing the wives.

After dark, the king, the premier, Mr. Richards, and myself, met at the premier's, and on this occasion the papers already mentioned were delivered to me. About eleven o'clock the king accompanied me to my quarters, where we spent the evening in great sociability and cordiality ; and, after we had got among the small hours, I returned with his majesty to the palace, where we found Haalilio engaged in study, with a large volume before him.

The forenoon of Thursday, the 24th of March, I employed in paying farewell visits. The premier was waiting my arrival, showily dressed for the occasion,

and surrounded by all the peeresses of her court. She thanked me kindly for the interest that I had taken in the affairs of her country, expressed an earnest wish to see me back among them, and desired her warmest regards to my wife, presenting to her, through me, a very handsome feather mantle, such as is worn only by royalty itself. Queen Kaluma, whom I next visited, likewise charged me with presents and good wishes for all the members of my family, obviously remembering her own bereavements when she spoke of my children.

At noon, the king, the secretary, Keoni Ana, Mr. Richards, and others, accompanied me to the ship; and, on our almost immediately getting under way, I shook hands with my very kind friends of the Sandwich Islands, exchanged salutes with the fort, and returned the three hearty cheers which the king and his party gave us from the boats.

The change of temperature, as we proceeded to the northward, was very rapid, being observable at least to our sensations, not only from day to day, but almost from hour to hour. First of all, flies, mosquitoes, and insects, began to disappear; then we found great coats, while we were on deck, any thing but a burden; and, lastly, we reinforced our beds with a large increase of blankets. On the fourth day after leaving Mowee, our recollections of the temperate zone were still more vividly refreshed by a storm of snow and sleet. This sudden transition from a sunny sky and a balmy atmosphere to cold, damp, and searching winds, seriously affected the health of all on board, especially of the poor Sandwich islanders. Nor did the lower animals suffer less than the human beings. The cattle fell off

from day to day, till they were mere skin and bone; and the goats remained close by the galley fire from morning to night, turning themselves round and round, as if roasting, in order to do equal justice to all parts of their bodies.

On the morning of the twenty-second day from Lachaina, we were roused from our lethargy by the cheerful cry of "Land!" and again came in sight of the rugged coast at the entrance of Norfolk Sound, with Mount Edgecumbe on the north, and Point Woodhouse on the south of the opening. Mount Edgecumbe, so named by Captain Cook, is an excellent landmark for making the harbour of Sitka, rising from the water in the form of an almost perfect cone, and wearing a "diadem of snow" nearly all the year round. Though at present it exhibits no traces of internal fires, yet it has been an active volcano during the residence of some of the present inhabitants of New Archangel; and many indications in the neighbouring country, such as earthquakes, hot springs, and occasional eruptions of smoke and ashes, tend to prove that the subterranean energy is not yet wholly extinct.

A heavy squall of snow, which came on while we were entering the sound, rendered it impossible to see a quarter of a mile from the vessel, so that we were obliged to haul our wind and stand off for the night. Next morning, Saturday, the 16th of April, we entered the sound, firing two guns, at the early hour of five, as a signal for a pilot. We soon received an answer in the shape of an old fellow, who, after doing honour to the indispensable dram, took charge of the Cowlitz. The channel appeared to be very intricate, winding among

low islands covered with pines, which at present were almost buried in snow; and it was not till we were close upon it, that the establishment of New Archangel suddenly burst on our view, with some ten or twelve vessels lying at anchor under its batteries.

Before plunging into that colossal empire, whose length is to occupy an almost uninterrupted flight, for journey I cannot call it, of about five months, let me indulge in a brief retrospect of such portion of my wanderings as I have happily accomplished. I have threaded my way round nearly half the globe, traversing about two hundred and twenty degrees of longitude, and upwards of a hundred of latitude; and in this circuitous course I have spent more than a year, fully three-fourths on the land, and barely one-fourth on the ocean.

Notwithstanding all this, I have uniformly felt more at home, with the exception of my first sojourn at Sitka, than I should have felt in Calais. To say nothing of having always found kindred society, I have every where seen our race, under a great variety of circumstances, either actually or virtually invested with the attributes of sovereignty. I have seen the English citizens of a young republic, which has already doubled its original territory, without any visible or conceivable obstacle in the way of its indefinite extension; I have seen the English colonists of a conquered province, while the descendants of the first possessors, however inferior in wealth and influence, have every reason to rejoice in the defeat of their fathers; I have seen the English posts, that stud the wilderness from the Canadian lakes to the Pacific Ocean; I have seen English adventurers,

with that innate power which makes every individual, whether Briton or American, a real representative of his country, monopolizing the trade, and influencing the destinies of Spanish California; and, lastly, I have seen the English merchants and English missionaries of a barbarian archipelago, which promises, under their care and guidance, to become the centre of the traffic of the east and the west, of the new world and the old. In seeing all this, I have seen less than the half of the grandeur of the English race.

How insignificant in comparison are all the other nations of the earth, one nation alone excepted! With the paltry reservation of the Swedish Peninsula, Russia and Great Britain literally gird the globe where either continent has the greatest breadth,—a fact which, when taken in connexion with their early annals, can scarcely fail to be regarded as the work of a special Providence. Hardly was the Western Empire trodden under foot by the tribes that were commissioned for the task, from the Rhine to the Amoor, when He, who systematically vindicates His own glory by the employment of the feeblest instruments, found in the unknown wilds of Scandinavia the germ of a northern hive, of wider range and loftier aim. At once, as if by a miracle, a scanty and obscure people burst on the west and the east, as the dominant race of the times; one swarm of Normans was finding its way through France to England; while another was establishing its supremacy over the Slavonians of the Borysthenes, the two being to meet in opposite directions at the end of a thousand years.

It is in this view of the matter that I have in these pages preferred the epithet *English*, as comprising both

British and *American*, to the more sonorous form of *Anglo-Saxon*. The latter not only excludes the true objects of Divine preference, but also, in excluding the Normans, it loses sight of the co-operation of Russia as the appointed auxiliary of England in promoting, perhaps by different means, the grand cause of commerce and civilization, of truth and peace. Reflecting on the common origin and common destiny of Russians and Englishmen, I ought to feel that I am still to be among friends and kinsmen. Even the very difference of language, while practically it makes me a stranger, serves to confirm my deductions.

In addition to the permanent conquests already mentioned, the Normans, as a mere episode in their history, rivalled Grecian and Italian fame on the soil of Italy and Greece; and yet, though uniformly victorious in all the climes of Europe, they were never numerous enough to engraft their own speech on that of those whom they subdued. This unparalleled and incredible success cannot be otherwise explained than by believing that the Normans were everywhere strengthened by the Almighty to accomplish the universal purposes of His omniscience.

CHAPTER XIV.

SITKA.

Landing—Difference of day of week—Bishop of Sitka—Departure for Taco and Stikine—Tragical end of Mr. John McLaughlin—Critical position of establishment and consequent proceedings—Abundance of pine and cypress—Voyage back to Sitka—Arrival on Easter Sunday—Peculiar customs of this festival—Divine service—Officers of Russian American Company—Mechanics and labourers—Married women—Hospital—Bishop's farewell sermon—Strictness of clergy in general and also of laity—Ecclesiastical zeal of Russian Government, united with spirit of toleration—Medicinal springs, favourable influence on vegetation as well as health—Perseverance of natives in bathing—Water impregnated with sulphur—Capital mistake of a recent visitor—Redoubt—Miserable weather at Sitka—List of shipping—Sailing of Constantine with M. Rotscheff and family—Sailing of Ochotsk—Tchuktchi of Siberia—Fair of Ostrovnoye—Tchuktchi chief's notion of perfect happiness—Behring's Straits—Climate, British Isles and Kamschatka—Indian fight—Immediate stop to the issue of liquor among Indians—The evil in question the inevitable result of competition—Political relation between Indians and Russians—Yassack, its origin and progress—Kaluscian funeral—Wedding at Sitka—Bridesmen and bridesmaids—Embarkation on board the Alexander and departure from New Archangel.

After receiving a hearty welcome from Governor Etholine, we proceeded to the house assigned for our use, which was so near the sea, that it might literally have been described, at high tide, as "surf-beaten." As we passed through the village, we appeared to be objects of much curiosity to the inhabitants, especially to the fair sex; and out of every door and window there peeped forth faces of all possible degrees of unwashed dinginess, to take a survey of the strangers.

The day of our arrival, which was Saturday with us, was, of course, Sunday at Sitka. Consequently, no progress was made in the discharging of our vessel; and next morning both the officers and men, whether through scruples of conscience, or a spirit of patriotism, or the love of a holiday, strongly remonstrated against turning an English sabbath into a Russian Monday. This, however, was too much; so that, after assuring them, on the faith of the proverb, that at Rome they ought to do as the Romans did, I sent them to work, though very much against their own inclination.

On the Friday after our landing, the Bishop of Sitka returned from Kodiak, distant about six hundred miles, after a run of five days. His outward voyage, however, had occupied precisely four weeks, this unusual detention having led to a good deal of privation, more particularly as the vessel was crowded with passengers; the daily allowance of water had been gradually reduced to one pint for each person; and, on anchoring at Kodiak, the whole of the remaining stock consisted of a single bottle. This prelate's diocese is perhaps the most extensive in existence, comprising, as it does, not only the whole of Russian America, but also the Sea of Ochotsk, Kamschatka, and the Aleutian archipelagoes. He looks as if intended by Nature for the bishopric of two worlds, being a man of herculean frame; and the specimen of his travels, which I have just mentioned, shows that he is likely to need all his constitution for an episcopal visitation.

Finding that the vessel, in which I was to proceed to Ochotsk, would not sail till two or three weeks later than I had been led to expect, I was anxious to employ the intermediate month as usefully as possible; and as

Governor Etholine kindly afforded me the use of the Russian steamer to tow the Cowlitz, on her way to the Columbia, through the more intricate and dangerous portion of the inland navigation, I determined to embrace the opportunity, which this arrangement gave me, of visiting our establishments of Tako and Stikine.

Leaving New Archangel on the day after that of the bishop's arrival, we passed through Peril Straits into Chatham Sound, and, without having halted in the night, anchored at Tako next evening about seven. After shipping furs and getting a supply of fuel, we again started at noon of the following day. By day-break on Monday the 25th of April, we were in Wrangell's Straits; and towards evening, as we approached Stikine, my apprehensions were awakened by observing the two national flags, the Russian and the English, hoisted half-mast high, while, on landing about seven, my worst fears were realized by hearing of the tragical end of Mr. John M^cLoughlin, Jun., the gentleman recently in charge.

On the night of the 20th, a dispute had arisen in the fort, while some of the men, as I was grieved to hear, were in a state of intoxication; and several shots were fired, by one of which Mr. M^cLoughlin fell. My arrival with two vessels at this critical juncture was most opportune, for otherwise the fort might probably have fallen a sacrifice to the savages, who were assembled round it to the number of about two thousand, justly thinking that the place could make but a feeble resistance, deprived, as it was, of its head and garrisoned by men in a state of complete insubordination; and, if the fort had fallen, not only would the whites, twenty-two

in number, have been destroyed, but the stock of ammunition and stores would have made the captors dangerous to the other establishments on the coast. In fact, it was to the treacherous ferocity of the neighbouring tribes, that the recent catastrophe was indirectly to be imputed, inasmuch as the disposition in question rendered necessary such a strictness of discipline as would, in a great measure, account for Mr. McLoughlin's premature death.

From the depositions of the men, I ascertained beyond a doubt that a Canadian of the name of Urbain Heroux had discharged the fatal shot. How to bring the fellow to justice was the question. In my opinion, the jurisdiction of Canada, as established by 43 Geo. 3, ch. 138, and 1 and 2 Geo. 4, ch. 56, did not extend to Russian America; and, on the other hand, I knew that the Russians had no court of criminal jurisdiction in America; while, at the same time, I was by no means certain that, even if they had such a tribunal, they would take any cognisance of a crime that did not concern them. Under these circumstances, I determined to take Heroux with me to Sitka, a step which, besides being, at all events, a lesser evil than letting him go free, appeared to offer the only chance of making the man atone in some degree for his offence.

Having so far settled this matter, I demanded from four of the neighbouring chiefs, with whom I had an interview, some explanation with respect to their designs on the establishment: and they, while repudiating any imputation of the kind for themselves, admitted that an attack on the fort had been recommended by some rash youths, but had been opposed by the wiser

and older heads. I congratulated them on not having committed any overt act of hostility, assuring them that, in that case, they would have been most severely punished both by the Russians and by ourselves. The chiefs replied that, in future, they would so conduct themselves, as to merit our entire approbation, and would be security against any attacks on the part of any of the neighbouring tribes. I farther took this opportunity of preparing the natives for a measure which the Hudson's Bay Company was most anxious to introduce in this quarter, and which it had already introduced elsewhere with the happiest results, namely, the discontinuance of the use of spirituous liquor in the trade.

I placed the establishment under the charge of Mr. Dodd, chief mate of the Cowlitz, a young man in whom I had much confidence, giving him, as assistant, one Blenkinsop, who, though merely a common sailor, was of regular habits, and possessed a good education.

On the north-west coast, dense forests of pine reach the water's edge, both on the continent and on the islands, whence might be drawn masts and spars of the finest timber and largest dimensions; and such wood is peculiarly abundant about Stikine, where there is also a species of cypress, which, from its durability and lightness, is almost unequalled for boat-building. Little or no attention has hitherto been bestowed on the subject of turning this natural wealth to useful account; but I now gave orders that a number of logs and spars, both of cypress and pine, should be prepared for shipment, so as to be always in readiness to be conveyed by any of our vessels, as opportunities might occur, to our depôt at Vancouver.

Every arrangement having been completed, we weighed anchor at dawn, on Thursday, the 28th; and, after both vessels had exchanged salutes with the fort, the steamer towed the Cowlitz out from the anchorage; and, on casting her off, we returned straightway to Sitka, without touching again at Tako. We anchored the first night at Point Fanshaw, in Prince Frederick's Sound, and the second in Peril Straits, deriving their name from their dangerous shoals and also from the circumstance that a great many Aleutian hunters and their families were here poisoned by eating muscles.

During our voyage, a good deal of snow fell, and the weather was altogether very disagreeable, with a heavy sea. But, notwithstanding this, the steamer, when she had the wind in her favour, performed six or seven knots an hour — very fair work, considering that, like the river-boats of the United States, she had her cabin and a great part of her machinery on deck. She was commanded by a very active and intelligent man, Captain Lindenburg, with an American engineer of the name of Moore, an excellent pilot, who acted also as first mate, a purser, or supercargo, and a crew, including the assistant engineer and the stokers, of twenty-two, making, in all, the number of twenty-six men.

Having now taken farewell of the new style for some months, I shall hereafter adopt the Russian calendar, while the English reader can, of course, rectify any date merely by adding twelve days. We reached Sitka about nine in the morning, on Sunday, the 18th of April, being, according to the reckoning of the Cowlitz, Saturday, the 30th. All the people were decked out in their best clothes; and many of them, even at that early

hour, were quite tipsy. In short, it was Easter Sunday, a festival celebrated with extraordinary solemnity in the Greek church, wherever its celebration is not absolutely impossible. A striking instance of this, and of a somewhat affecting character, occurs in the account of my friend Baron Wrangell's northern voyages. I quote the very words of the translation, premising that the worshippers were out of sight of land, beset by fissures in the ice, impassable hummocks, and open water, with the additional discomforts of wearied dogs and broken sledges.

“The 10th was Easter-day, kept as a festival throughout the whole Christian world, but especially so in Russia. We joined in the prayers of our far distant friends by the prescribed service, which was read by M. Bereshnoi, and the hymns were sung by our Cossacks and sledge-drivers. A block of ice was carved to represent an altar, and the only wax-light we possessed was burnt in front of it. The day was one of rest and refreshment to all: our festive fare was frugal enough; we had reserved for it a few rein-deer's tongues and a little brandy; a much greater treat was a small fire, kept up during great part of the day.”

From midnight till four in the morning, a grand service had been performed by the bishop and his priests, at the conclusion of which the revels had begun in good earnest. On reaching Governor Etholine's residence, I was ushered into the banqueting-room, where a large party was just rising from the remains of a substantial breakfast. There were present the bishop and priests, the Lutheran clergyman, the naval officers, the secretaries, accountants, store-keepers, clerks, masters and

mates of vessels, to the number of about seventy, while on the outside of the circle there were ranged about fifty boys belonging to the naval school. Every person was arrayed either in uniform, or at least in his Sunday's best; and, altogether, such a display was hardly to have been expected on the north-west coast of America. The only drawback to the hilarity which a hearty meal was sure to inspire after a fast of six weeks, was the absence of Madame Etholine, who had been confined to her bed for several days. At the usual hour of one o'clock, about fifty of the guests again assembled to dinner, which went off with great eclat; and the rest of the day was passed with the assistance of coffee, smoking, chatting, and billiards, while the good folks of the village, in the very best of humours, made quite a business of dancing, singing, and carousing.

From morning to night, we had to run a gauntlet of kisses. When two persons met, one said, "Christ has risen," while the other replied, "Yes, surely he has risen;" and then came the salutations, some of them certainly pleasant enough, but many of them, even when the performers were of the fair sex, perhaps too highly flavoured for perfect comfort. In plain truth, most of the dames of the village had been more liberal of some other liquids than of clean water.

Another custom of the Greek Church at this season reminded me of a similar practice in some parts of Scotland. People carry about with them a number of eggs boiled into stones, either dyed, or gilded, or painted, for the purpose of presenting them to their friends, and the party who receives one of them as a gift either makes an immediate return in kind, or

gives the donor a trifling acknowledgment on some other occasion. I had the honour of bagging, in spite of my heterodoxy, many of these little memorials of a Russian Easter.

During the whole week, a third custom prevailed, in the shape of the incessant ringing of all the bells in the church. From morning to night, from night to morning, there was nothing but one perpetual peal of discord; for, whether by chance or by management, every rope had its own motion and every clapper its own tune. From this custom there was no escape. The eggs were harmless, and the kisses, if disagreeable, might be washed off; but these confounded bells would be heard, even if we should lie awake for the purpose of listening. The sweetest sound that had previously greeted our ears was that of the sabbath-bell of Honolulu; but here we had so much of a good thing, that I was positively sick of it. The evil, however, might have been worse, for luckily the Lutheran chapel made no noise, the bell being an appendage exclusively of the National Church; and I was sincerely thankful that toleration had stopped at the critical point.

On Tuesday, which, as well as Monday, was a close holiday, I attended divine service, which, in consequence of the illness of the bishop, was celebrated by a young monk, with the assistance of three priests. Beyond the richness of the vestments and the splendour of the ritual, I could take little or no concern in what I did not understand; while the absence of seats rendered a detention of three hours as fatiguing as it was uninteresting.

On Wednesday, to my great relief, business once more resumed its sway, and the establishment, barring,

of course, the saturnalia of the bells, relapsed into its old routine of active regularity.

In the service of the Russian American Company, the officers are divided into two classes. The Captain of the port, the secretaries, three public and two private, two masters in the navy, the commercial agent, two doctors, and the Lutheran clergyman, form, at present, the first class, and constantly dine, by general invitation, with the governor; while the civilian masters of vessels, the accountants, the head engineer, and about twenty clerks and storekeepers, form the second class, and dine together in a club. The salaries of these officers, independently of such pay as they may have, according to their rank in the Imperial navy, range between three thousand and twelve thousand roubles a year, the rouble being, as nearly as possible, equal to the franc; while they are, moreover, provided with firewood and candles, with a room for each, and a servant and a kitchen between two. Generally speaking, the officers are extravagant, those of five thousand roubles and upwards spending nearly the whole, and the others getting into debt, as a kind of mortgage on their future promotion.

For the amount of business done, the men, as well as the officers, appear to be unnecessarily numerous, amounting this season to nearly five hundred, who, with their families, make about one thousand two hundred souls as the population of the establishment. The servants are kept in good order, and appear to be quiet and tractable. They work from five in the morning till seven in the evening, with an interval of about an hour for dinner; as breakfast is seldom eaten among Russians,

no time is allowed for that meal. Among the servants are some excellent tradesmen, such as engineers, armourers, tin-smiths, cabinet-makers, jewellers, watchmakers, tailors, cobblers, builders, &c., receiving generally about three hundred and fifty roubles a year; they have come originally on engagements of seven years; but most of them, by drinking or by indulging in other extravagance, contrive to be so regularly in debt as to become fixtures for life.

On going the round of the tradesmen, the workshop of the engineer gratified me most, not merely because Moore was a man of superior ingenuity, but because he had trained five or six creoles and half-breeds to discharge all the mechanical duties of his business nearly as well as himself. As a proof of the efficiency of this department, the whole of the machinery of a tug of seven-horse power was cast and manufactured here, as well as of two pleasure-boats of two-horse power each, one belonging to the Governor and the other to Moore. The tug is usefully employed in towing vessels to and from the anchorage; and something of the same kind is much wanted in the Columbia, to save the valuable time that is now lost; I mean, of course, above the bar, in the difficult navigation of that stream.

Many of the servants have Russian wives; but most of the females of the establishments are Aleutian and Indian half-breeds. These native women, naturally no beauties, are begrimed with dirt, while many of them, like their lords and masters, are addicted to drunkenness, which, in their case, leads, as a matter of course, to other vices. The majority of the people look sallow and unhealthy, rather, I conceive, through their intem-

perate habits, than through the effects of the climate. Cases of the prevailing diseases of the coast are here frequent, while scurvy is encouraged by the absence of cleanliness and the dampness of the atmosphere, and not by the nature of the food, which is always fresh and generally nutritious.

Of all the dirty and wretched places that I have ever seen, Sitka is pre-eminently the most wretched and most dirty. The common houses are nothing but wooden hovels, huddled together, without order or design, in nasty alleys, the hotbeds of such odours as are themselves sufficient, independently of any other cause, to breed all sorts of fevers. In a word, while the inhabitants do all that they can to poison the atmosphere, the place itself appears to have been planned for the express purpose of checking ventilation. But Governor Etholine, whose whole management does him infinite credit, sees the evil, and is introducing many improvements which, when completed, will materially promote the comfort and welfare of the lower classes.

Prevention is not only better than cure, but cheaper also. At present, the expense of the hospital must be very heavy, while a great part of it is doubtless occasioned by such circumstances as money is quite competent to remove. In its wards, and, in short, in all the requisite appointments, the institution in question would do no disgrace to England. The cases consist chiefly of typhus and continued fevers, pulmonary complaints, syphilis, affections of the eye, and hæmoptysis, this last complaint, nobody knows why, being very common on this coast.

On Sunday next, the first after Easter, the Bishop

of Sitka, who, as already mentioned, had just returned from Kodiak, preached a farewell sermon on the eve of departing, on a visitation of two years, for the Asiatic half of his diocese. In addition to four assistants in holy orders, he was attended by a number of youthful acolytes, all as proud as possible of their embroidered robes of silk and velvet; the congregation was large and well dressed, while, so far as I could judge from the earnestness of the preacher, and the attention of the hearers, the sermon was more than ordinarily impressive. On taking leave of this worthy prelate, I cannot refrain from rendering a small tribute of praise to his character and qualifications; and, as he is still in the prime of life, I trust that his widely-scattered flock may long enjoy the benefit of those powers of mind and body, which combine to fit him for his important and arduous charge. His appearance, to which I have already alluded, impresses a stranger with something of awe, while, on farther intercourse, the gentleness which characterises his every word and deed, insensibly moulds reverence into love; and, at the same time, his talents and attainments are such as to be worthy of his exalted station. With all this, the bishop is sufficiently a man of the world to disdain anything like cant. His conversation, on the contrary, teems with amusement and instruction; and his company is much prized by all who have the honour of his acquaintance.

The conduct of the clergy in general of the Greek church appeared to me to deserve great commendation, both as to the performance of their duty and the observance of their vows. With respect to Lent in particular, not only the priesthood but also the laity ex-

hibited the greatest strictness, not shamming on beef, like the Californians, but really fasting according to rule. On Easter Sunday I was peculiarly struck by the contrast between the haggard and emaciated looks of the reverend guests and their zeal in making amends for their past abstinence on Governor Etholine's hospitable fare. As to the laymen, the termination of the forty days is by them hailed with undisguised ecstasy, everything being previously prepared to atone for lost time. On the last evening of the long fast, sumptuous repasts feast the nostrils at every fire; and no sooner does time toll the knell of the enemy, than the good folks rush like wolves to the rescue, always eating to repletion, and sometimes gorging themselves into apoplexy. In fact, on the occasion which has just past, a young lieutenant in the establishment had well nigh paid his life as the price of his indiscretion.

The presence of a bishop and a complete body of ecclesiastics in this secluded corner of the empire,—at a distance of nearly two hundred degrees of longitude from the capital,—is merely in accordance with the long-tried policy, which has amalgamated so many uncongenial tribes into a compact people, by means of one law, one language, one faith,—a policy which England, perhaps, through the freedom of her institutions, has too much neglected. Through this policy, Russia, though apparently the most unwieldy state on earth, is yet more decidedly one and indivisible than any other dominion in existence, as is more than proved by the fact, that a single one of the three principles of cohesion, which cement her parts into a whole, vests in her an almost direct sway over the foreign professors of her creed.

As the only Christian power within the limits of the Eastern church, Russia succeeded, in the middle of the fifteenth century, to the religious supremacy of the dethroned emperors of Constantinople; and, within twenty years after the fall of the imperial city, she openly assumed her new position by changing the title of her sovereign from Grand Duke to the Czar, or the Cesar. Since then, she has been the watchful guardian of her venerable faith, whether existing in Europe or in Asia. It was in this character that she first interfered in the internal affairs of Poland, where the Catholics were oppressing the Greeks; and more recently, to say nothing of Wallachia and Moldavia, she has become the virtual sovereign of the Christians of Turkey, simultaneously acquiring, at the very least, in the same proportion, an influence throughout the more easterly provinces of Austria.

But, in the person of the Lutheran clergyman, New Archangel shows that a spirit of toleration is combined with this zeal for the established religion. Though the Eastern church, as such, had never been addicted to persecution, in the worst sense of the term, yet Peter the Great was the first sovereign of Russia who treated other denominations with justice and liberality—doing so, by the by, at the very time at which William the Third was introducing the same equity and humanity into England. In consequence of Peter's amelioration of ecclesiastical system, all sects now enjoy liberty of conscience in Russia, two cases perhaps excepted. The Roman Catholics, partly because they are chiefly Poles, and partly because they are suspected of clinging to

Papal influence, are regarded with suspicion, but nothing more; and the Roskolniaks, a most fanatical tribe of schismatics from the national church, are sometimes driven about unceremoniously enough as disturbers of the public peace. Such are the only exceptions; and even in them there is vastly more of political caution than of sectarian intolerance.

Next day, being Monday the 26th, I started in the small steamer to visit some hot springs, which are used chiefly as baths, about twenty miles to the north of New Archangel, and arrived at my destination about three in the afternoon. The establishment in the neighbourhood consisted of three snug cottages, being kept in order by an old fellow of a Russian and his daughter, both of whom, whether from choice or by way of example, took a plunge every day for half an hour at a time. The damsel's rosy cheeks seemed to speak volumes in favour of the waters, though, perhaps, they were merely the result of being cooked every forenoon in a temperature of upwards of 130° of Fahrenheit. This establishment is employed as an hospital for invalids from Sitka, and is found to be efficacious in rheumatism, fevers, syphilis, and cutaneous disorders, the process being to bathe in the first three of these four cases, and to drink in the last.

The buildings are pleasantly situated on the sloping face of a bank, at a distance of about a hundred yards from the sea. In the front, lies a pretty little bay, completely sheltered by an archipelago of islands, and in the rear is a barrier of rugged mountains, while, in the immediate vicinity, there springs up a luxuriant

verdure, in consequence of the genial warmth diffused by the waters, which send up a column of vapour to mark the spot from a considerable distance.

At the time of my visit, this green oasis presented a variety of shrubs in full blossom, though the surrounding wilderness, all as dead as cold could make it, still wore its mantle of snow. Here, moreover, are to be found plants that grow nowhere else in the neighbourhood, as also many rare birds—even the humming-bird; some attractive through the gaiety of their plumage, and others agreeable from the melody of their notes. Altogether, this is, indeed, a spot on which the senses may rest with pleasure, when weary of the savage monotony of the rocks and forests of the coast. The means of living are also abundant, the water being alive with fish and fowl, and the land teeming with deer and game.

In the neighbourhood, there are four distinct springs, all taking their rise from fissures in the granite rock, with which these islands abound. At its source, the principal spring possesses a temperature of 54° of Reaumur, or $153\frac{1}{2}^{\circ}$ of Fahrenheit, being hot enough, as we found by experiment, to cook an egg in eight minutes. From this spring, the two baths, one for the natives and the other for the whites, are fed; while, by flowing about fifty yards through several small channels, the waters are reduced to an average temperature of 130° of Fahrenheit, or $43\frac{1}{2}^{\circ}$ of Reaumur.

As this natural “medicine” is held in high estimation by the surrounding tribes, the native bath enjoys no sinecure of it. When the country is sufficiently peaceable for moving about in safety, the savages think no

thing of coming two or three hundred miles to benefit by the healing waters ; while they do their best to take their travelling expenses out of them, by lying in soak for hours at a time, with nothing but their heads visible, eating, drinking, and, I may add, sleeping in the bath. I can certainly vouch to the extent of four hours for two women, one of them with an ulcer on her hip, and the other with an affection of the spine. When reduced to a state of lassitude by the parboiling, particularly after taking a meal in the cauldron, the patients munch a little snow, when such a luxury is attainable, by way of dessert.

There appear to be several substances held in solution by the water. The main ingredient, however, is sulphur, which is easily detected by the taste, as well as by the smell ; while the stones in the channels are also encrusted with it. In fact, the island of Sitka is principally of volcanic origin ; and, in proof of the former activity of internal fires, to which I have already alluded, eighty-four different volcanoes have been in operation, in the country under the jurisdiction of the Russian American Company, within the recollection of many of the inhabitants of New Archangel.

I remained only one night, having bathed twice, or rather once ; for, on the second occasion, whether the temperature was higher, or my skin had been rendered more sensitive by the first operation, I was glad to scramble out immediately, as red as a lobster, or, to humour the locality in the way of a simile, as red as the rosy cheeks aforesaid of the lady of the ascendant. This tutelary nymph, by the by, led a recent visitor into a capital mistake. In her capacity of handmaid, she had fre-

quent occasion to enter the room where he was sitting; and invariably, on coming into the presence, she bowed down to the ground at every step, crossing herself reverentially all the while. Whether she meant to exorcise him, or to worship him, or, in default of a cap, to set her rosy cheeks at him, he could not tell; but, by means of signs, he kept entreating her not to trouble herself on his account. In spite of my maturer years, the pretty maiden behaved towards me in the same extraordinary way; and, what was far more mysterious, she still continued, when I slipped away to try her, to rehearse her obeisances before the empty chair.

While I was speculating on her proceedings, I happened to cast my eye on the grim visage of an image, which occupied a niche in a dark corner of the room immediately behind the position which I had just left. The bubble was now burst; and my young predecessor was, of course, mortified to find, on my return to headquarters, that the Naiad's conspicuous attentions had been directed over his head to a musty old saint.

On my way back, I stopped at what is called the redoubt, lying at about equal distances from the baths and New Archangel. The situation of this spot is curiously romantic. With little or no land in sight, but lofty mountains, a lake empties itself by a picturesque cascade into a channel of about fifty yards in width, which again flows between perpendicular walls of nearly eight hundred feet in height, into a deep indentation of the sea. Though, as a military position, it may hereafter be valuable, yet, at present, it is applied only to commercial purposes. Mills of various kinds avail themselves of the fall, while the salmon, as they

leap upwards, are caught in weirs to the number of eighty or one hundred thousand every season. The buildings stand on the dry part of the ledge of rocks, down which the lake rushes into the channel beneath, being kept in good order by an old soldier, with some twenty men under his command. At this place, from which escape must, of course, be peculiarly difficult, I found Urbain Heroux, whom I had brought from Stikine, moving about as a prisoner at large, as the Russians are said never to put any person in irons before conviction. Here, however, the fellow, I apprehend, was as secure as fetters and manacles could have rendered him.

We reached New Archangel just in time to avoid some boisterous weather, in which the small steamer could not possibly have put to sea. In all my experience, I have never seen anything so miserable as the almost constant damp, fog, and rain of the last three weeks; and yet, after all, the climate of Petersburg is said to have been proved, by actual observation, to be more humid than that of Sitka.

On reaching New Archangel, I found more than usual activity reigning throughout the establishment, as several vessels were simultaneously taking in cargo and making preparations for their respective voyages. The bustle, in fact, was sufficient to have done credit to a third-rate seaport in the civilized world. I subjoin a list of the shipping.

1. Helen	ship	350 tons
2. Alexander	barque	300 „
3. Bichal	brig	200 „
4. Constantine	„	200 „
5. Ochotsk	„	150 „

6. Promysle	schooner	80 tons.
7. Quah-pak	„	80 „
8. Chichakoff	brig	150 „
9. Morischold	schooner	80 „
10. Polypheme	brig	150 „
11. Sitka	„	300 „
12. Nicholas	steamer	60 horse-power.
13. Moore, tug	„	7 „

One is at first surprised that the transport of so limited a business requires so many vessels; but, as the posts are widely scattered and the seasons of open water in these northern latitudes are short, the apparent extravagance is, in a great measure, inevitable. The *Alexander*, which is to be our ship, is fitted more like a man of war than a merchant vessel, the whole 'tween-decks, fore and aft, being laid out in accommodations for the crew, and the cabin being arranged and furnished in the handsomest style. She was built two years ago at Abo, in Finland, and cost about £5,000; and, with the care that is here taken of shipping, she is expected to last about twenty-five years.

On the 1st of May, the *Constantine* sailed with supplies for Atcha, in the Aleutian archipelago, and Chamchoo, one of the Kurile islands, thence to proceed with the returns of those places to Ochotsk. She had about sixty persons on board, including passengers, of whom some were bound for Ochotsk and others for Europe. Among the latter was Mr. Rotscheff, already mentioned, with his family, who was recently in charge of Bodega, in California, with a salary of five thousand roubles a year—an income on which, besides furnishing his house and entertaining visitors, he had to maintain a wife, himself, and three children.

Mr. Rotscheff is a very good-looking man, in the prime of life, and is the author of several works of the lighter order, both in verse and prose. He had been doing very well in Petersburg as a translator of foreign pieces for one of the principal theatres, when he was so fortunate, or so unfortunate, as to make a conquest of a daughter of Prince Gargaren, without the approbation of her family. His wife, who accompanied him to the far East, is intellectual and accomplished, speaking several languages, conversant with many branches of science, and divinely musical. This poor lady, "reared in the halls of princes," and accustomed, in early life, to all the luxuries of society, meets her present difficulties and privations with a degree of firmness which does her infinite honour. There she sate, with all the fortitude and cheerfulness imaginable, cooped-up with her husband and seven children, four of them not her own, in a small cabin, with the prospect before her of a dangerous voyage to Ochotsk, and an equally dangerous ride of seven thousand miles to St. Petersburg. I sincerely trust that for all these hardships she may be rewarded by a reconciliation with her friends, who, notwithstanding their high blood and high titles, have no reason to be ashamed of this fallen member of their stock.

The Constantine was commanded by M. Kashiooaroff, a lieutenant of the second class in the Imperial navy, with a crew of two mates and eighteen seamen. By the regulations of the Russian American Company, every nautical officer has an allowance for the table, a captain receiving fifty roubles a month, and a mate twenty-five. This system might, I think, be introduced,

with very great advantage, into the commercial marine generally. At present, a skipper is hospitable at his owner's cost, giving dinners, balls, &c., very much on the principle of the man,

Who, out of his great bounty,
Built a bridge at the expense of the county.

But, if the host had to supply everything himself out of a limited sum, he would waste less of the ship's time in convivial entertainments.

On the 4th of the month, the *Ochotsk* sailed for Oonalashka and some other neighbouring stations. She had the good bishop as a passenger for her first mentioned destination, whence the Bichal was to convey him to Kamschatka. She was also carrying Lieutenant Zagoiskin to Norton Sound, who was thence to explore the interior as far as Bristol Bay, on the one side, and on the other, to examine the Quihpok, a large river falling into Behring's Straits.

The object of this expedition was to occupy the country, by posts, in order to protect the trade from the *Tchuktchi* of Siberia, who cross the straits every summer to traffic with the American Indians, carrying their furs, ivory, &c., to the fair of *Ostrovnoye*, and there receiving in exchange various articles, but more particularly tobacco, as the means of prosecuting the next season's trip. The fair in question is held on the *Lesser Aniuy*, which falls, through the *Greater Aniuy*, into the *Kolyma*; and it is described, in a very lively manner, in the *Journal* of Captain Cochrane, who had attended it, with the view, in which, however, he failed, of penetrating to Behring's Straits, through the country of the *Tchuktchi*.

These mercantile savages are certainly very clever

fellows, being equal, if not superior, to the Russian dealers, according to the gallant traveller just named. They are first-rate judges of tobacco; and, what is almost incredible, they can weigh a pood of it in their hands, without artificial aid, accurately enough to detect any attempt whatever at imposition. In their eyes, tobacco is peculiarly valuable, as the grand instrument at once of pleasure and business; and, in Baron Wrangell's travels, one chief is mentioned, who declared that the emperor, in return for some information that he had given, could not possibly make him so happy with anything else as with a sack of the precious weed, and an iron kettle.

At some points, Behring's Straits are only forty-five miles in width, with a chain of islands, like so many stepping-stones, extending from shore to shore, the longest traverse not being more than seven miles; so that the navigation is practicable even for small canoes. In the general appearance of the two coasts, there is a marked difference, the western side being low, flat, and sterile, while the eastern is well wooded, and in every respect better adapted than the other for the sustenance both of man and beast. Moreover, the soil and climate improve rapidly on the American shore as one descends; and at Cook's Inlet, potatoes may be raised with ease, though they hardly ripen in any part of Kamschatka, which extends nearly ten degrees farther to the south. As, in addition to the advantages of cultivation, deer, fish, game, and hay are abundant, the company contemplates the forming of a settlement here for the reception of its old servants. In the neighbourhood, on an island near Kodiak, there is plenty of good coal, used

both for the hearth and the forge, though it is objectionable for the latter purpose, as producing too great a quantity of ashes.

In point of climate in general, there is nearly the same difference between the western shore of America and the eastern shore of Asia, as there is between the western shore of Europe and the eastern shore of America. In both cases, the same cause exists to produce the same effect. In the temperate latitudes, the prevailing wind is from the west, being a kind of counter-current to the easterly trades of the tropics; and, with reference to this physical fact, the leeward coast of either continent must be colder, at least in winter, than the windward one, inasmuch as the former receives its atmosphere across an enormous zone of frozen soil, and the latter across a considerable breadth of open water. But, in addition to this common ground of superiority, a great part of Russian America possesses an advantage peculiar to itself in being sheltered from the northerly gales. Reckoning upwards from Mount St. Elias, or even from Cross Sound, the more southerly half of the coast, comprising, of course, Cook's Inlet already mentioned, runs pretty nearly east and west, screened towards the interior, within a very short distance from the sea, by a wall of mountains.

To place in the most striking light the contrast in point of climate between the opposite shores of each continent, Kamschatka and the British isles may be said, with sufficient accuracy for this purpose, to lie in the same latitudes, and to present the same area, and even to occupy the same position with respect to the proximity of water; and yet, while the British isles, from

their own agricultural resources, feed at least twenty-five millions of their inhabitants, Kamschatka, with the help of extraneous supplies, can barely prevent its population of four thousand souls from starving. How different the history of man would have been, if Providence had made these two extremities of the old world exchange climates, merely by causing the tropical trades to blow from the west, and the counter-currents of the temperate zones to blow from the east; or to express the same thing, I apprehend, in other words, merely by reversing the direction of the earth's daily revolution!

Soon after my return from the baths, I witnessed an Indian scene, which surpassed in wildness any thing of the kind that I had ever seen. In the native village, which lies under the guns of the fort, two savages, the one a high chief, and the other a man of some consequence, but still inferior in rank to his companion, had quarrelled over their cups; and, in the scuffle that ensued, the former had slain the latter, by stabbing him through the lungs with his dagger. The party of the deceased, to the number of about a thousand men, immediately turned out, with horrible yells, to revenge his death, painted in the most hideous manner, and armed with all sorts of weapons, such as spears, bludgeons, dirks, and firearms; while the women, more ferocious, if possible, than the warriors themselves, were exciting the tumultuary band to actual violence by the most fiendish screams and gestures. From the battery, where we had all taken our stand to watch the proceedings, Governor Etholine endeavoured, but in vain, to appease the fury of the mob; happily, however, the approach

of night prevented the immediate commencement of the civil war.

By six in the morning, I was roused from my bed by information that, with a new day before them, the friends of the deceased were determined to carry their threats of the preceding afternoon into execution. The scene, when we were all again collected on the battery, would beggar description,—several thousands of all ages, and both sexes, unaccustomed at any time to put the slightest restraint on their passions, and now maddened into demons, most of them with arms, partly by their own vindictiveness, and partly by the exhortations of their schamans, or priests. The chief's life was demanded as an atonement, but refused by his party, as being of more value than that of the person slain. At this point, the Governor and the Bishop interposed on behalf of the chief, as being a baptized member of the church; while, by way of backing the remonstrance, the guns of the battery, already pointed in the right direction, were made ready for action. This strong hint in favour of a compromise was not lost. The parties met with a loud war-whoop; for a minute or two a clashing of arms was heard; and when both sides simultaneously receded from the spot, we beheld the bodies of two slaves that had been sacrificed in lieu of the chief. The ignoble blood of the unfortunate substitutes—quantity making up for quality—was accepted as a satisfactory adjustment of the feud, and the village again resumed its wonted appearance. By the by, the combatants wore, as defensive armour, leathern jerkins and wooden cuirasses, which protected the body, down to the knees, against spears, but not against bullets.

This scene of violence, and the recent tragedy at Stikine, both events being clearly the result of drinking to intoxication, determined Governor Etholine and myself, on behalf of our respective companies, to discontinue the use of spirituous liquors in trading with the natives of this coast; and we immediately entered into an agreement to that effect, which was to come into operation at Sitka from the date of signature, and at every other post from the day on which it might become known.

The practice of selling spirits to Indians was adopted at Sitka by the Russians in the year 1832, in order to protect themselves against some American adventurers, who had introduced the liquid fire; and it was in consequence of a similar necessity that the Hudson's Bay Company was induced to countenance the pernicious system. Everywhere, in fact, competition and ruin go hand in hand in trafficking with aboriginal tribes, while an exclusive privilege gives its possessor a palpable interest in preventing intemperate habits, as the unfailing source of the savage's moral and physical deterioration.

At the more northerly posts on the continent, and generally throughout the islands, the Russians did not use spirituous liquors. Even at Sitka, they were intending gradually to withhold the means of intoxication from their own servants. Such a measure would have been impracticable, previously to the arrangement which had just been completed, inasmuch as many of the thirstier souls, when stinted in the shop, often purchased the needful from the savages at a ruinous advance, of course, on what the sellers had themselves paid. Even now an immediate abolition would be by

no means advisable, as most of the best artisans, if condemned to be sober, would as soon as possible quit so dry a service, and thus involve the Company in a considerable amount of expense and inconvenience. Some reformation certainly was wanted in this respect, for, of all the drunken as well as of all the dirty places that I had visited, New Archangel was the worst. On the holidays, in particular, of which, Sundays included, there are one hundred and sixty-five in the year, men, women, and even children, were to be seen staggering about in all directions.

The treaty between Governor Etholine and myself was speedily put to the test. In order to drown all remains of former animosity in another debauch, the savages made application, as a matter of course, for a sufficient quantity of rum. Judge the astonishment of the poor creatures on learning that, without their own consent, we had been making them take the pledge of total and perpetual abstinence. They retired in sullen silence; and we had no doubt that many a grave council would be held on the north-west coast, to devise the means of removing the obnoxious restriction.

The aborigines of America, as the reader must have gathered from these details, are not subjects of Russia in the same sense as the aborigines of Siberia and the intervening islands. They do not exhibit that badge of servitude which, having been introduced by the earliest conquerors, has travelled eastward from the Gulf of Finland to Behring's Straits. A tribute in skins was exacted by Rurick and his Normans from the Sclavonians on Lakes Ilmen and Ladoga; a similar yassack formed the temptation and the reward of the Cossacks,

who, with undaunted courage and unwearied patience, subdued tribe after tribe to the eastward, following every river in Siberia to its own sea; and even the same acknowledgment of vassalage is annually rendered at the fair of Ostrovnoye by the Tchuktchi, through whose territory not a single servant of the government has ever penetrated by force. Thus, curiously enough, the fur trade has been, for ten centuries, the pervading thread of Russian politics as well as of Russian commerce, from the Baltic to the Sea of Kamschatka, from the Altai Mountains to the Frozen Ocean.

While I was at New Archangel, a funeral took place among the Kaluscians, the name of the tribe inhabiting the native village. The body, arrayed in the gayest apparel of the deceased, lay in state for two or three days, which were spent by the relatives in fastings and lamentations. At the end of this period, it was placed on a funereal pile, round which the mourners ranged themselves, their faces painted black, their hair clipped short, and their heads covered with eagle's down. The pipe was next passed round two or three times; and then, at some secret signal, the fire was kindled in several places, while a discord of drumming and wailing deafened one till the pile was consumed. Lastly, the ashes were collected into an ornamented box, which was ultimately to be elevated on a scaffold, or on the top of a pole. On the side of a neighbouring hill we saw a vast number of these monuments, which presented a very curious appearance.

The Kaluscians are a numerous tribe, their language being spoken all the way to the northward, from Stikine as far as Admiralty Bay, near Mount St. Elias; thence

to Prince Williams' Sound is another language; and four or five more languages divide between them the coast up to Icy Cape.

New Archangel, notwithstanding its isolated position, is a very gay place—much of the time of its inhabitants is devoted to festivity; dinners and balls run a perpetual round, and are managed in a style which, in this part of the world, may be deemed extravagant. Amongst other gaieties that took place during my visit, was a wedding between one Pauloff, mate of a vessel, and a rather good-looking Creole girl, about twenty years old, named Archemanditoffra. Attended by their friends and the principal inhabitants of the establishment, the happy couple proceeded about six in the evening to church, where a tedious service of an hour and a half was solemnized by the monk. At the close of the ceremony, which comprised fully the usual proportion of dumb show, the bridegroom led off his bride to the ball-room. I was going to say that he was followed by his guests; but the expression would have been incorrect, for the guests were not his. The sufferer, in these cases, according to the rule made and provided in Russia, is the individual who has enjoyed the honour of giving away the lady,—an honour which, however unpleasant in itself, or in its incidents, no man is expected to decline. Archemanditoffra's father for the occasion was Lieutenant Bertram, one of the Company's principal officers. On entering the ball-room, the bride and bridegroom took their station at the upper end, where Lieutenant Bertram described a variety of mystic signs on their breasts with the bridal cake, which, being thus consecrated, was sent off as fit for

use. The newly-married pair sat side by side, while every gentleman, in his turn, drank to their health and happiness in a glass of champagne.

On this occasion were assembled nearly all the beauty and fashion of Sitka, the latter quality, if I may presume to offer an opinion, being perhaps more conspicuous than the former. The ladies were showily attired in clear muslin dresses, white satin shoes, silk stockings, kid gloves, fans, and all other necessary or unnecessary appendages; and these fair ones enjoyed the advantage of being at a high premium, inasmuch as the gentlemen, who amounted to about fifty, outnumbered them in the proportion of nearly two to one. The ball was opened by the bride and the highest officer present; quadrilles and waltzes followed in quick succession; and the business was kept up with great spirit till three o'clock in the morning. The band was of a superior description, some of the clerks and servants being fine performers, who exerted themselves to the utmost. The master and paymaster of the ceremonies did his duty like a prince. Tea, coffee, chocolate, and champagne, were handed about in profusion, varied, at proper intervals, with sandwiches and liqueurs; while a smoking-room, besides being a necessary of life to many, afforded a place of retreat to all such as did not wish to take part in the dancing.

On these matrimonial occasions the father of the bride, however hard his lot, gets off much more cheaply than some of the other auxiliaries in the drama. According to a law of the church, the bridesmaids and bridesmen are prohibited from marrying each other; but as, in the limited society of New Archangel, where

the lottery consists of so few tickets, youths and maidens would never officiate together on such forbidding terms, the church has indulged Sitka with a special dispensation in this respect.

At length the day arrived, Sunday, the 9th, on which I was to bid adieu to the new world. Governor Etholine, being punctual in all his engagements, had, according to appointment, completed everything in time for the vessel to sail this afternoon. At eleven in the forenoon, I accompanied him on board of the *Alexander*, on his usual visit of inspection previously to her taking her departure; and, on this grand occasion, all the men and officers were dressed in full uniform, while the vessel and all her appurtenances were in complete order. We were formally received at the gangway, under a salute, by Captain Kadnikoff, and found on deck a monk and two assistants, waiting to bless the ship for her long voyage. When prayers had been read below, the monk returned on deck, and, after pronouncing the customary form of words, sprinkled the flag, which was lowered for the purpose, with holy water, as also the mainmast and crew, using in the ceremony a silver-handled brush of elaborate workmanship. The people having been inspected by Governor Etholine, a basin of the men's soup was brought for him to taste, which, though to my eye rather washy and transparent, he pronounced to be excellent.

The ship's company amounted in all to thirty-six, consisting of the captain, two mates, a pilot, boatswain and boatswain's-mate, gunner and gunner's-mate, and twenty-eight seamen, all man-of-war's men, and decidedly the stoutest body of fellows that I ever saw. In addi-

tion to the crew, there were four supernumerary boys, belonging to the naval school at Sitka, who had been placed on board to acquire some practical knowledge of their future profession.

A very elegant cold collation had been provided by the captain, of which about twenty of us partook, washing it down with abundance of champagne; and, when we returned to the establishment, I was much pleased again to see Madame Etholine for the first time since I started in the Cowlitz for Stikine. The farewell dinner, to which about thirty of us sat down, exceeded in sumptuousness anything that I had yet seen even at the same hospitable board. The glass, the plate, and the appointments in general, were very costly; the viands were excellent; and Governor Etholine played the part of host to perfection. After dinner, I took, for the last time, my accustomed walk with the Governor by the only path, which, owing to the swampy character of the neighbourhood, is at all practicable, winding on the beach round a small bay, till intercepted by what is called the Little River. During this walk, I took leave of several of my old friends, particularly of Kathrine, the acknowledged belle of the place, who, though the tailor's daughter, has a host of suitors of all ranks.

A dense fog, which came on after dinner, prevented our immediate departure; but, as all my baggage had been sent on board during the day, I went off to the vessel to sleep. The passengers by the *Alexander* were my own party and an officer of the Russian American Company, besides the clerks who had charge of the valuable cargo of furs. Next forenoon, the continuance

of the thick weather afforded an opportunity to our friends to pay us farewell visits ; and I had the pleasure of receiving in my new quarters the Governor and his confidential secretary, Mr. Teil, the two doctors, Lieutenant Villachkoffsky, and several others. The fog soon dispersing, the anchor was weighed ; and with deep regret I bade adieu, probably for the last time in life, to the kind-hearted denizens of Sitka, and more especially to their courteous and hospitable chief. The unremitting attentions of all had made me regard them rather as brothers than as strangers ; and I felt that I should long cherish the recollection of the many happy hours that I had enjoyed among them.

We were towed out of the harbour by the Nicholas steamer, while the Moore tug accompanied us for a short distance, with Governor Etholine and several of our other visitors on board, who, before putting about, gave us nine hearty cheers, which we returned with interest. In passing, we saluted the fort with seven guns ; and, about one in the afternoon, the steamer cast us off, and, cheering us as she departed, left us to perform a voyage of eighty-two degrees of longitude and nearly twenty of latitude.

Having now fairly lost sight of New Archangel, let me once more record my thanks to Governor Etholine and his staff of highly enlightened officers for all the civility and politeness which they lavished on me even at this the busiest season of their year ; and, if circumstances had permitted me to prolong my stay among them till the bustle was all over, they would doubtless, as their kindness evidently came from the heart, have surpassed themselves in hospitality and

friendship; speaking, by the by, of the season, the pressure of work in spring has reference rather to Ochotsk, which is seldom accessible before the end of June, according to the old style, than to Sitka itself, which is one of the very few harbours in the empire that are open all the year round.

As the wind was free, an hour brought us abreast of Mount Edgecumbe, which, independently of a grandeur peculiarly its own, we continued to watch with considerable interest, as being the last land in our wake.

CHAPTER XV.

VOYAGE TO OCHOTSK.

Lightness and variableness of winds—Ship's discipline, &c.—Drunken priest—The Parachute, of New Bedford—Whales rapidly diminishing in number—Unknown island—Hunting of sea-otters—Danger of sinking in the small baidarka, and affecting mode of meeting death—Russian surveys of the northern shores of Asia, anticipated by England at either extremity of line—Voyages of Cook and Billings—Aleutian Archipelago probably the original channel of communication between the two continents—Behring's Straits perhaps a passage from America to Asia rather than from Asia to America—Aleutian Islands, their ethnographic characteristics—Probable course of emigrants from Aleutian Islands on landing in America—Increasing difficulty of tracing the migrations of tribes—Productions of Aleutian Islands—Russians first to plant civilization on north-west coast, statements of Shelekoff—Signs of land—Kamschatka, its corrupt government—Popular delusion with respect to despotism—Passage between Kurile Islands into Sea of Ochotsk—Dense fogs, contrivances to neutralize them—Sleeping whale—Story of Mr. Erasmus and the fogs—Kuriles apparently continuation of Kamschatka—Immediate influence of Russia from Sweden to Japan—Sea of Ochotsk—River Amoor, its physical value neutralized by politics—Collision of Russia and China on the Amoor—Sight of land, and preparations for going ashore—Impenetrable barrier of ice—Hair seals—Sleeping whale—Keel-hauled whale—Arrival at Ochotsk—Optical illusion—Record of disasters in these seas.

Throughout the voyage, the winds, as is almost constantly the case here in summer, were remarkably variable, seldom holding longer than twenty-four hours in one direction; and the weather was so calm and the swell so gentle, that, between the middle of May and

the end of August, an open boat might traverse these seas in safety.

The greatest order and quiet prevailed on board, all the duties being performed with the regularity of clockwork. Our mess was small, consisting of Captain Kadnikoff, my own party, and the officer already-mentioned; while Mr. Bagenot, the supercargo, had a general invitation to join us; and on Sundays our circle was increased by the addition of the first and second mates, the ship's clerk, and the purser. Having an abundant supply of provisions and a cook, who was a master of his art, we fared sumptuously on board of the *Alexander*.

On the 16th of the month, being our first Sunday at sea, the people were all mustered for inspection; and Captain Kadnikoff, in full uniform, after exchanging something like "Good morning" with the men, reminded them in a few words, that, though they were in the employment of the Company, they yet also served the Emperor, the great master of all. Divine service was then performed in the 'tween decks, illuminated for the occasion by wax candles and embellished with some image or other, while the congregation, which consisted of all and sundry, kept crossing and bowing, with little or no intermission, from first to last. Though the *Alexander* did not carry a chaplain of her own, yet she happened to have a priest on board, who had been degraded at Sitka for drunkenness. Having been kept sober on purpose, our reverend friend went through the duty in the most impressive manner, being a man of commanding appearance, with a voice of surpassing mellowness and strength.

By noon on the following Wednesday, we had reached

the longitude of Kodiak, the first of the chain of isles that connects the two continents, and the latitude of Cape Lopatka, the most southerly point of Kamschatka, having run about a hundred and eighty miles before a south-easter in the preceding twenty-four hours. To put us in still better spirits, we perceived, in the course of the afternoon, a large ship looming through the fog, within a few hundred yards of us. On our nearer approach, we distinguished the Stars and Stripes, while her stock of boats told her business as plainly as her flag indicated her nation; and, on passing close under her stern, we read her name, "Parachute, of New Bedford."

On our firing a gun, both vessels backed their main topsails for a parley. A boat was lowered by the American; and a man, whom we had no reason to consider as a skipper, scrambled up among us. According to his account, the Parachute had been out nineteen months, and had got two thousand two hundred barrels of oil, 1500 of them the produce of thirteen right whales taken last summer between latitudes 49° and 56° , and longitudes 140° and 152° . At the close of the season, she had been within thirty miles of the south-eastern corner of Kodiak, having thence proceeded by way of California, fishing, as she went, with very little success, to the equator, where she caught four sperm whales: she had again, within these few days, reached her old ground, described by our informant as the best at present known, expecting to have about two hundred competitors this year, instead of the fifty that she had had last; she had twenty-seven men on board, all engaged on lays or shares, and had lost two in the preceding

summer from the stroke of a whale ; finally, she had a captain of the name of Wilcox, who gloried in being a real "teetotaller."

Singularly enough, we were able to offer to the good ship Parachute more than an equivalent in kind for her bit of autobiography. In conversation with my servant, one of her mates discovered that, in travelling from Boston to Montreal, we had changed horses at his father's house at Richmond, in Vermont, thus bringing the poor fellow intelligence of his relatives later by eight or nine months than what he himself possessed. Under the circumstances, the recognition, if I may so speak, was as agreeable as it was unexpected.

Captain Kadnikoff having asked our communicative visitor whether he would drink, Jonathan promptly replied, "I guess, I don't care if I do;" but, when presented accordingly with half a tumbler of rum on deck, he appeared to have changed his mind, saying, "I guess, I don't care if I don't." Suspecting the cause of his refusal, I suggested to Captain Kadnikoff to ask him below ; and our shaggy friend, after half an hour's chat, returned to the Parachute, to say nothing of a few bundles of Manillas in his pocket, with a tumbler or two of port in his stomach—pretty well for Captain Wilcox, the real "teetotaller," in his own proper person.

From Captain Kadnikoff and other persons acquainted with these waters, I have learnt that whales of huge size, some of them a hundred and twenty feet in length, are extremely numerous in the Sea of Kamschatka and about the Alentian islands, and that they are frequently killed by the natives by means of spears and arrows shod with stone. As these whales are by far too large

to be dragged to land by the savages, the plan is merely to wound the monster as seriously as possible, and then to trust to the winds to strand him in a few days. On or before the third day, he generally dies, for, however powerful to resist his persecutors at the moment of attack, the whale, when wounded, is by no means tenacious of life in proportion to his size and strength.

To return to Captain Wilcox's story. It is surprising that the Russian government allows its coasts to be scoured, in the way described, by fleets of foreign vessels. Every state is surely entitled to the fisheries of her own shores; and, moreover, with respect to the particular fishery in question, all the whales in the ocean must soon be exterminated, if those, who have no permanent interest in preserving them to control their temporary interest in destroying them, are permitted to pursue an animal, which, besides being too large to hide itself, multiplies so slowly, into its most secret haunts.

Next morning, the wind fell off to a dead calm, which continued all day, with a good deal of sea-weed, some gulls, and two whales around the ship. In consequence of the presence of the sea-weed, a cast of the lead was taken; but no bottom was found with a hundred fathoms. We were here told of an unknown island, supposed to exist about a hundred miles to the north of our position; and I give the story as I got it, not on account of the island itself, but on account of the circumstance that is said to have led to the alleged discovery.

Though the aborigines of the islands between Asia and America were found to live, according to their own

expression, as the otters and seals lived, yet they were, through the influence of Russian missionaries, gradually so far weaned from this habit of promiscuous intercourse as to see it in its true light. In this improved state of public feeling, an Aleutian and his daughter, who had committed incest together about two years ago, found themselves to be outcasts among their own people; and, pushing off in a baidarka from Kodiak, they paddled steadily to the southward for four days, till they came to an island which was previously unknown. After a year's sojourn, they returned to Kodiak, and, in consequence of their report, a vessel was despatched to search, but in vain, for this *terra incognita*.

It is not uncommon for the Aleutians to make long voyages in their small baidarkas, often going fifty or sixty miles from land to hunt the sea-otter. For this purpose they keep together in fleets of perhaps a hundred baidarkas each. Proceeding in calm weather to some spot known to be a favourite haunt of the animal, they form their little vessels, end to end, in a line; and, as soon as any symptoms of the game are perceived, a single canoe approaches, while, if all is right, one of its two inmates holds up his paddle as a signal for the others to range themselves in a circle round the spot. Meanwhile, the creature must rise to breathe; and no sooner does he show his nose, than off fly the arrows of the nearest hunters. If he escapes, as is generally the case, from the first attack, another ring is formed round the place where he may be expected again to appear; and so the process is continued, till the victim is exhausted and destroyed. All these movements are executed with an incredible degree of silence, the

hunters being so skilful as to prevent even the dip of the paddles from being heard by the object of their pursuit.

These distant expeditions are not unattended with danger. The baidarka, being merely a frame of bones with a covering of skins, cannot withstand the action of the water for many days together; and if it springs a leak or is otherwise injured, its tenants have nothing but certain and immediate death before them, for no other vessel can take more than its own complement on board; and, calling their comrades around their sinking craft, they send kind messages to their wives and families, and then lie down to die without a single effort at self-preservation.

During the last few days, I have occupied myself in reading Wrangell's *Siberian Voyages*,—a work which, interesting, as it must be, even to the general reader, is peculiarly so to myself under my present circumstances. But, with all my respect for the noble author, I must do battle with the very first sentence of his introduction:—

“ The whole of the immense extent of country from the White Sea to Behring's Straits, embracing a hundred and forty-five degrees of longitude along the coast of Asia and Europe, has been discovered, surveyed, and described by Russians. All the attempts of other maritime nations to find a passage by the Polar Sea from Europe to China, or from the Pacific into the Atlantic, have been limited, in the West by the Karskoie Sea, and in the East by the meridian of the Cape North. The impediments which stopped the progress of others have been conquered by Russians, accustomed to the

severity of the climate, and to the privations inseparable from it."

The third sentence, when taken in connexion with the second, clearly implies that the Russians have found that "passage by the Polar Sea from Europe to China" which "other maritime nations" have failed to find. Now, what are the facts, as recorded by my friend himself? Rather more than a hundred years ago, expeditions were simultaneously undertaken from different points on the coast at the public expense, in order to ascertain how far the route in question was practicable or otherwise. In passing from the White Sea to the Gulf of Oby, four seasons were consumed; from the Gulf of Oby to the River Yenisei, four seasons; from the Yenisei to the Lena, season after season was spent in both directions without success, Cape Taimura having not only never been doubled by water, but never even been visited by land; from the Lena to the Kolyma, six seasons were occupied; from the Kolyma to the Pacific, every effort was fruitless, though, about the middle of the seventeenth century, Simon Deshneff, a Cossack, had sailed, in a single summer, from the Kolyma through Behring's Straits as far as the Anadyr. To sum up all in one word, fourteen years were required for accomplishing the easiest three of the five grand divisions of the coast; while of the two other divisions the more easterly has never been accomplished within these hundred and ninety years and upwards, and the more westerly always has defied, and probably always will defy, every human effort.

But these achievements, however much they fall short of "a passage by the Polar Sea from Europe to China,"

do certainly speak volumes, as every reader of the Baron's details must admit, in favour of the skill, hardihood, and patience of the various explorers, who have uniformly done all that men could do. Still, however, the Russians, in contrasting their success with the failure of "other maritime nations," should reflect that, besides having by far the most direct interest in the result, they were immeasurably nearer to their resources,—an advantage which, as my brief summary must have shown, alone enabled them to perform what to any other people whatever would have been utterly and absolutely impossible.

In this view of the case, even if the Russians had been completely successful, there was really no room for comparison. All that could be said with respect to the result, as distinguished from the merits of the agents, would be that the Russians, issuing from their own rivers, surveyed their own shores. But even this limited honour of attending to her own work Russia must share with England; or rather, wherever distant resources were at all available, England has done nearly everything, and left Russia almost nothing to do. The Russians have been anticipated by English navigators and travellers on every foot of the northern coast of their share of America; Cook was the first, without ever being followed by a second, to penetrate as far as Cape North, on the corresponding coast of Asia; and the same illustrious voyager was the true and only discoverer of Behring's Straits, for the mariner, after whom he generously named them, passed through them without having ascertained the proximity of the two continents, or even their separation; while the Cossack Deshneff,

already mentioned as having sailed from the Kolyma to the Anadyr, perhaps ascertained their separation, but certainly not their proximity.

But, at the opposite extremity of her boundless coast, Russia has been far more deeply indebted to England. When Richard Chancellor, about the middle of the sixteenth century, anchored in the White Sea, he not only discovered a considerable portion of coast for Russia, but also rescued her, by means of commerce, from that state of isolation into which religion had thrown her; and in the enterprise of this gallant sailor, the Czar, who was then exulting in the final conquest of the Tartars, had the sagacity to take nearly as much interest as in the capture of Kazan and Astracan. For the service of connecting the White Sea with the German Ocean, Russia, I admit, paid handsomely in allowing England to enjoy, for nearly a century, the monopoly of the newly opened trade; and, as a curious proof of the value of Archangel, at a much later period, to both the powers in question, I cannot refrain from quoting part of a speech of the late Lord Sydenham, delivered in 1829:—

“ He, whose armies successively occupied every capital in Europe,—who made and unmade kings with a breath,—was set at nought by the lowest of his subjects. The smuggler bearded him in the streets of his capital, and set his power at defiance in his own ports and cities. The goods which he refused to admit found their way through the Frozen Ocean into the heart of France. I speak from personal knowledge when I say, that an uninterrupted line of communication was established between Archangel and Paris; and goods, even the bulky articles of sugar, coffee, and manufactures, were con-

veyed with as much ease and safety, though at a proportionally increased cost, as from London to Havre."

To return to my original quotation, I ought, in justice, to add, that, with the exception of the general compliment already discussed, Baron Wrangell by no means displays any undue partiality in favour of his countrymen; for, on the contrary, he admits that, in point of geography and hydrography, the voyages of Cook and Billings—the latter an English officer of Cook's training, employed in the imperial service—alone "afforded any really satisfactory result."

Had time and opportunity permitted, I should have liked much to visit the Aleutian archipelago, in which one cannot help taking an interest, as being probably the main route by which the old continent must have peopled the new. Behring's Straits, though, as already stated, they were doubtless one channel of communication, just as certainly as if their place had been occupied by solid land, were yet, in all likelihood, only of subordinate utility in the premises, when compared with the more accessible and more commodious bridge towards the south.

Looking merely at these two highways between the two worlds, and putting all others, as irrelevant to the present purpose, out of the question, there were only three roads by which the destined colonists of America, or rather their forefathers, could stumble either on Behring's Straits, or on the Aleutian archipelago. If they came up the coast along the Japanese and Kurile Islands, they would, more particularly with their maritime habits and their insular notions, if one may so speak of the geography of the globe—they would, I

say, be almost certain, before sojourning many years in Kamschatka, to discover the more westerly of the adjacent isles; if again they followed the rivers that flow eastward into the Sea of Ochotsk, they would, in all probability, strike the path of the wanderers under the preceding supposition; and, even if they proceeded from the Lower Lena across the valleys of the Yana, the Indigirka, the Alasei, and the Kolyma, they would still be more likely to climb the height of land between the easterly tributaries of the last-named river and the Anadyr, than to plunge, without a single one of Nature's tracks to tempt them, into the perpetually bleak and barren country of the Tchuktchi, while, from the valley of the Anadyr, they would clearly have a stronger motive for diverging to the south, with its milder climate, than for returning to the north, which they had already shunned.

These are not such theories as look well merely on paper, for the most questionable one, and perhaps the only questionable one, of the three, namely, the last, has literally been reduced to practice in modern experience. In their progress down the valley of the Amoor, the Russians were arrested by the Chinese towards the close of the seventeenth century, so as to be prevented from reaching the Kurile islands in that direction; and, though they penetrated to the Sea of Ochotsk in a higher latitude, yet they were deterred, partly by the want of local resources, and partly by the belief that they had penetrated to the open ocean, from prosecuting their easterly course till after Kamschatka had been discovered from another quarter.

Starting from Yakutsk, on the Lower Lena, the

Cossacks passed in succession all the more easterly feeders of the Polar Sea, ascended the Greater Aniuy, an auxiliary of the Kolyma, to the height of land, descended the Anadyr to the eastern ocean, and subsequently overran Kamschatka, spending on this long and circuitous journey, as if to show that the necessities of nature had more to do in the matter than the caprices of man, the lives of two generations. In another period of nearly the same length, they grasped link after link of the intermediate chain, ferrying themselves, as it were, across the Pacific merely by making a long arm; till, at last, in 1783, they moored their fortunes to the farthest end of the line by planting a settlement on the island of Kodiak. Might not the effect, which was produced by the force of physical circumstances, in the seventeenth and eighteenth centuries, have been produced by the same cause two or three thousand years before?

From this detail of facts—a detail entirely independent of any and every hypothesis—one may reasonably doubt whether Behring's Straits, as a channel of communication between the two continents, have not rather carried the tide of population from America to Asia, than from Asia to America. In other words, the Tchuk-tehi, of Siberia, are more likely to have come from the east than from the west. When human beings first reached the Kolyma, not only would the inland routes of Nature's making lead them, as already mentioned, to the waters of the Anadyr; but the inhospitable character of the coast, which, for ten degrees to the eastward of the Kolyma, does not contain one living inhabitant, would also help to force them to the same

conclusion. But the American origin of the Tehuktchi appears to be susceptible of something like direct proof. Another branch of the same tribe actually occupies the opposite shores; while the fact already mentioned, that the western division regularly visit their eastern kindred without being revisited in turn, appears, in a great measure, to imply that the former are the children, and the latter the parents; that the old world has here been colonized from the new; and still more positive evidence, though less direct in its character, is furnished by Captain Cochrane, in the apparently insignificant fact that, while all the other aborigines, within his remarkably extensive experience, Kamschatdales included, were passionately fond of chess, the Tehuktchi alone ridiculed the game as a mere waste of time.

In support of these views may be cited the ethnographic characteristics of the Aleutian Islanders. According to Governor Etholine, the savages in question resemble the Japanese in various respects; while, according to the concurring testimony of all visitors, they form, in many other particulars, a connecting link between the aborigines of Siberia and those of the northwest coast. Their language—the most decisive test of a community of origin—is said to have many words in common with that of the Esquimaux. Nor is this fact repugnant to any of the foregoing opinions. In the Aleutian archipelago, the grand staple of human subsistence, even with all the aids of a comparative degree of civilization, is the blubber of the whale and the flesh of the walrus; and those primeval voyagers, who had been accustomed to such food, would, on reaching America, be more likely at first to go to the north in quest

of their peculiar staff of life than to turn to the south in search of such unknown luxuries as a fertile soil or a sunny sky. In all probability, however, the islanders would reach the continent at some point of that section of the coast, where they would have to choose, not between south and north, but between east and west; and the chances, therefore, would be in favour of their spreading, even on their immediate arrival, in both directions.

Such speculations, to which, however useless in themselves, one feels himself drawn as if by a charm, are daily becoming more difficult through the gradual diffusion of civilization and Christianity among aboriginal tribes, to say nothing of their rapid depopulation. By acquiring new ideas and feelings, and adopting new habits and customs, savages are naturally led to corrupt, or even to neglect, their ancient traditions; to varnish, or peradventure to wash, their original features; in short, to overlay the past with the present.

The Aleutian Islands are now far less valuable than they once were. The human inhabitants hardly muster one to ten of their early numbers, having been thinned, and thinned, and thinned again, for here there is no mystery in the case, by hardships and oppression. They were ground down through the instrumentality of the natural wealth of their country; they experienced the same curse in their fur-seal and their sea-otter, as the Hawaiians in their sandal-wood, and the Indians of Spanish America in their mines of silver. To hunt was their task; to be drowned, or starved, or exhausted, was their reward. Even now, under better auspices and more humane management, the Aleutians are, in

every respect, servants of the Russian American Company, acting as labourers at the establishments, and as hunters throughout the whole country from Behring's Straits to California, while they almost entirely feed and clothe themselves without obtaining supplies.

The lower animals of the archipelago have diminished in fully as high a proportion as its human inhabitants. Oonalashka, and Atcha, and Kodiak, produce nearly all the sea-otters that are now collected, the whole stock not exceeding one thousand in a year. The fur-seal is principally found on St. Paul and St. George, which lie a little to the north of the main line of the islands, the annual booty amounting to not more than ten thousand or twelve thousand skins. The walrus, or sea-horse, is still very abundant, while the natives turn every part of his carcase to account. Thus the teeth, besides being valuable in commerce as ivory, serve to barb spears and arrows; the flesh affords food; the oil warms the huts and cooks the victuals; the bones and skin form the materials of the baidarka. But the skin of the animal is converted to more than one useful purpose by civilized men. First, it covers the packages of furs that are sent to Kiachta, then the chests of tea that are carried to Moscow; and having, by this time, been coined, as it were, with a great variety of stamps on its travels, it again visits its native seas, cut up into a circulating medium of small change for the Company's posts.

The soil and climate of some of the more easterly islands of the Aleutian archipelagoes are sufficiently good for the production of potatoes and the maintenance of domestic cattle, while at Kodiak there are also gardens for vegetables. On this last-mentioned island,

which possesses a tolerable surface of pulverized lava and vegetable mould, there exists a village of about four hundred inhabitants, the oldest settlement, as already mentioned, to the north of California. The Russians are certainly entitled to the credit of having been the first to plant civilization on the north-west coast ; and, in fact, they have generally been more assiduous than any other people in attempting to improve the economical condition of aboriginal tribes. In short, they had been led, by the example of Peter the Great, to regard civilization not as an incident of anything else but as a substantive business in itself ; and on this account one cannot peruse, without a peculiar interest, Shelekoff's narrative of his proceedings at Kodiak. I quote two passages :

“ They were filled with astonishment on seeing the expedition with which we constructed our houses, because they, who possessed only small iron tools to cleave the wood and form planks, employed several years in building a single hut. On observing the reverberators, which were suspended in dark nights, they believed that we had stolen the sun from heaven. I pitied their extreme ignorance, and could not suffer them to continue longer under such impressions of error, without attempting to enlighten their minds as much as lay in my power : I explained to them that the reverberator was the work of men, like themselves, and added, as long as they did not live peaceably, and adopt our customs and mode of life, they would never acquire a similar degree of knowledge. I laboured to persuade them to quit their savage life, which was a perpetual scene of massacre and warfare, for a better and more happy

state. I showed them the comforts and advantages of our houses, clothes, and provisions; I explained to them the method of digging, sowing, and planting gardens; and I distributed fruit and vegetables and some of our provisions amongst them, with which they were highly delighted.

“I endeavoured to give them some notion of books, offered to teach some of their children to read, and several brought them to me for that purpose. I must do these people the justice to allow that they were by no means deficient in capacity; for the children easily comprehended the instructions, and several of them, before my departure, spoke the Russian tongue so well, that they were understood without difficulty; and I left five and twenty scholars, who could read and write, and who would much rather have preferred being with the Russians than with their parents.”

On Saturday, the 12th of June, we were at our nearest to Kamschatka. The preceding week had been productive of much variety in the shape of weather, every twelve hours, in fact, having had their own rule in this matter. Calms and winds of every name and of almost every degree of force were most curiously interwoven, even the strongest breezes not living long enough to raise a sea; and, though the fog was pretty constant, yet observations were got almost every day. Albatrosses, boobies, and sea-parrots hovered about us, while several land-birds, that had been blown off the coast, fluttered wildly among them. One morning, the clamour and restlessness of our poultry drew our attention to a half-famished hawk; the poor chickens, though they did not know much about the matter, had

good reason to dread the sharpness of the rascal's appetite at a distance of two hundred and fifty miles from the nearest resting-place.

Kamschatka, which we were now passing, was to be visited by the *Alexander* on her return to Sitka in the autumn; and there was, in fact, a report that the peninsula itself was to be placed under the administration of the Russian American Company on nearly the same footing as the opposite continent and the intervening islands. On many grounds, this would be a blessed change for the inhabitants. The favourite maxim of most of the public officers, great and small, in Siberia, is that "God is high, and the Emperor far off;" and of this watchword the Kamschatdales are sure, from their unfortunate place on the map, to enjoy the fullest benefit. Every functionary, moreover, dabbles in trade as well as in government, while the priests compound a similar medley of traffic and religion; and, what is worst of all, these amateur peddlars, both the reverends and the honourables, find ardent spirits the easiest thing to carry, and the readiest thing to sell.

But, as if to complete their misfortunes, the Kamschatdales alone, of all the nations and tongues in the Russian empire, are still farther exposed to be fleeced by foreigners. Certain supplies of grain, tea, sugar, manufactures, &c., are sent annually from Ochotsk, in three small vessels, so badly commanded and so badly equipped, that every two or three years one of them is sure to be lost on her outward voyage, while the whole outfit, even without such an accident, is by no means adequate to the demand. As a lesser evil than absolute famine, the port of Petropaulosk is opened to the extor-

tion of strangers; and an American resident at the Sandwich Islands has, with the interested connivance of the authorities, been in the habit of availing himself very liberally of the privilege. All these mischiefs would, in a great measure, be remedied by the proposed transfer of the province from the Imperial Government to the Russian American Company.

It is a popular notion that, in a despotic monarchy, everything is the work of what is styled the pervading will. Though, in a small state, this doctrine may be correct, yet, in Russia, it is an impracticable delusion; for the Emperor, so far from being the actual ruler of Kamschatka, pays about five thousand roubles a year beyond the amount of the local revenue to those who plunder the subjects whom he himself certainly desires to protect. An extensive empire, that has neither free institutions to check oppression, nor a public press to expose it, must be governed, whether its name be China or Russia, rather by the local functionaries than by the central authorities, rather by interested caprice than by impartial law.

On Sunday, the 13th of June, having then been twenty-seven days out from New Archangel, we entered the Sea of Ochotsk, passing through its breastwork of the Kurile Islands, by a strait of about twenty miles in width. Though, at first sight, such a passage appears to be broad enough, more particularly as it is free from currents and rocks, yet its navigation is rendered dangerous by the almost constant fogs which are produced by the nearly direct collision between the warm flood, already mentioned, from the south, and the cold waters of the Sea of Ochotsk. These fogs are often so

dense as not only to render observations impracticable, but even to prevent one from seeing to the distance of a hundred yards. But, if the former evil be incurable, the latter, as we had an opportunity of perceiving, is not altogether without its remedy. An Aleutian on board, with the characteristic sharpness of vision of his race, discerned land at a distance of several miles, through a mist as impervious to ordinary eyes as a solid wall; and Captain Kadnikoff, by firing a gun now and then, and catching its echo, was able to ascertain, within limits sufficiently accurate to be very useful, both the direction and the distance of the nearest shore. One of our guns, by the by, disturbed a whale, nearly as big as our ship, lounging on the surface, within twenty yards of us; he raised his head, as if to ask why we interrupted his slumbers, and remained gazing stupidly at us, till we lost sight of him in the fog.

In consequence of the thickness of the weather in this neighbourhood, vessels have occasionally been obliged, after beating about till they could beat about no longer, to return to Sitka, without breaking bulk. A few years back, an unfortunate wight, of the name of Erasmus, was sent to inspect the Company's posts on these islands, whence he was to proceed the following season to St. Petersburg to join his wife and children, who had gone thither before him. Next year, however, he was left to his fate; for Lieutenant Zagoiskin, who was to carry him to Ochotsk, could not stumble on the island, where the poor man was anxiously waiting his arrival; and again, in the ensuing summer, when found by Lieutenant Villachkoffsky, he actually did get his baggage on board, and was himself rowing off to the

vessel, when, in consequence of a sudden gale, the ship was obliged to run for it, either proceeding contentedly on her voyage, as if she had not “left one breaking heart behind,” or, to take a more charitable view of the case, perhaps returning to grope about in vain for Mr. Erasmus and his island.

The Kuriles appear to be principally of volcanic origin; they are, moreover, so rugged and sterile as to look, in all respects, like a continuation of Kamschatka. Nor is the climate, as indeed one may expect from the perpetual fogs, superior to the soil. Here we were in the latitude of Paris, and on the hot side of midsummer, while the high grounds were covered with snow, and even the low grounds exhibited scarcely a symptom of vegetation. The three posts, which the Russian American Company has on the group, are maintained merely to collect furs, chiefly those of marine animals.

This archipelago, of which the more south-westerly islands belong to the Japanese, completes the line on which Russia directly and immediately influences nearly all the powers of the old continent—Sweden, now extending to the Atlantic; Prussia, virtually including all the minor states of Germany; Austria, with her vassals of Rome and Naples; Turkey, grasping the Danube with one hand, and with the other overreaching the Cataracts of the Nile; Persia, bordering on the sea that washes the coast of Malabar; Central Asia, marked by the footsteps of nearly all the conquerors of Hindostan; Thibet, containing the sources of the Burram-pooter and the Ganges; China, meeting Spain in the Philippines; and Portugal and England, in her own islands, and, lastly, that mysterious empire which

stands aloof alike from the commerce and the warfare of the world.

The Sea of Ochotsk is completely land-locked, being, in this respect, as well as in size and general situation, not unlike Hudson's Bay. The waters are shallow, not exceeding, about fifty miles from land, an equal number of fathoms, and rarely giving, even in the centre, above four times the depth just mentioned. As the height of land nearly all round is at an inconsiderable distance, the only river of any magnitude that flows into this vast inlet is the Amoor, if indeed the Amoor can fairly be said to do so, terminating, as it does, in a bay, which, being bounded in front by the Island of Sagalin, opens by one strait into the Sea of Ochotsk, and by another into the Sea of Japan.

In almost every point of view, the Amoor is the most valuable stream in Northern Asia. Of all the large rivers of that boundless region, it is the only one that empties itself into a navigable part of the universal ocean. The Obi, the Yenisei, and the Lena carry the waters of the Altai Mountains to the Polar Sea, there to be lost to commerce as effectually as if buried in the sands of a burning desert; the Yana, the Indigirka, the Alasei, and the Kolyma, which rise in a subordinate range, waste their respective tributes on the same hopeless wilderness of ice; and the Anadyr, and the Kamtschatka, though they do find their way to the Pacific, are yet of secondary volume in themselves, while the countries which they drain have little or no use for maritime outlets. The Amoor, in fact, is the only highway of nature that directly connects the central steppes of Asia with the rest of the world. But the

political arrangements of man have decreed otherwise ; and at this moment the Amoor is infinitely less useful, as a channel of traffic, than almost any one of all the land-locked rivers of Siberia. In one word, it belongs not to Russia, but to China.

Towards the close of the sixteenth century, and in the first quarter of the seventeenth, a few handfuls of Cossacks were successfully cutting their way from the Uralian chain to the Lena, there to encounter and subdue the Tungusian hordes, which, by the most extraordinary contrast in the history of the world, were, at one and the same time, falling before the mere outposts of Russia, and trampling under foot the ancient dynasty of China. By the middle of the seventeenth century, the Russians had advanced a considerable way down both sides of the Amoor, having the Pacific Ocean, as it were, already in their view, when China, having acquired a new interest to the northward through her involuntary connexion with the Tartars, turned her arms towards the same quarter. After a good deal of fighting, in which the Russians, notwithstanding their uniform inferiority in numbers, always dealt the hardest blows, the Chinese, partly by trickery and partly by being much nearer to their resources, forced their dangerous enemy by treaty to recede from the Amoor to a line of boundary terminating in the Sea of Ochotsk, on nearly the same parallel of latitude as afterwards divided Russia from England, on the eastern shore of the Pacific.

The treaty in question was made in 1689, soon after the commencement of the reign of Peter the Great ; and this most ambitious of the czars was doubtless the

more ready to ratify the dishonourable and disadvantageous compact, inasmuch as one of its collateral stipulations provided for the opening of a regular trade by land between the two empires.

Though, at first, the Russians were doubtless gainers by the compromise, yet they were gradually led to feel that a fair at Kiachta, or a factory in Peking, was a poor exchange for the only direct channel of communication with the Pacific. Through the loss of the Amoor, the discovery of Kamschatka, and the consequent discoveries of the islands and continent beyond, were reduced to half their value, even without reference to anything else than the mere expense of a more circuitous and less commodious route. But it was not only as a means of transit that the Amoor would have been serviceable to the more easterly adventurers. The grain, and the sails, and the cordage, and generally all such necessities as any part of the empire could produce—and the iron, too, from the mines of Nertshinsk—could have been found on the banks of the very stream which was to waft them to the ocean, thus not only supplying the sterile settlements to the eastward at a vastly cheaper rate, but also planting an agricultural population within reach of the sea.

But, even if neither America nor Kamschatka, nor the intervening isles, had ever been discovered or ever existed, the Amoor would have been invaluable to Russia, both on commercial and political grounds. It would have been the means of conducting a trade with China and the other countries of the East, more extensive and more advantageous than any overland commerce, furnishing not only a receptacle for vessels, but

also materials for building them. Again, by its position, as already mentioned, with respect to the Sea of Japan, it might have been made the station of such a navy as would have brought Russia, even as a maritime power, into influential contact with both her opulent neighbours; and it was probably to keep her within her own proper sphere, as a military colossus, and to prevent her from encroaching on the peculiar province of her destined associate, that Providence so unexpectedly gave her the only check that she ever sustained in her career of eastern conquest. If this be certain, as every thinking man must admit, that England and Russia are to be the grand instruments of a higher power in regulating the future fortunes of the world, then this also is at least as certain, that the sea and the land are to be, generally speaking, the respective theatres of their glory.

During the first four days after entering the Sea of Ochotsk, we kept running from four to ten knots an hour, so that we were now rapidly advancing to the termination of our long and tedious voyage. Everything betokened our near approach to our port. Cables were cleared; the work of holy-stoning the decks was diligently pursued; and, in short, all sorts of appurtenances and operations that could be either useful or ornamental were put in training against the moment of our arrival. Of all the vessels of my acquaintance, recommend me to the *Alexander*, just as she was then commanded and manned. Her captain was thoroughly conversant with his profession, and remarkably attentive to his passengers; the officers appeared to be each more skilful and vigilant than another; and the men were

fine, steady, active fellows, whose voices were never heard. The sailors in the Russian navy are quite conspicuous for their good conduct; and, as an eminent proof of this, they are rarely guilty of desertion, though they have more liberty than those in any other service, and are never watched, being considered to be upon honour.

At length, on the 17th, about nine in the morning, our Aleutian friend, who had, for several hours, been looking out from the mast-head, raised the joyful shout of "Land." In about an hour and a half, the outline of a range of hills became visible even to unpractised eyes; and though the prospect was dismal enough in the distance, I yet hailed with joy and thankfulness this first glimpse of Asia, which was, by comparison, to me the threshold of my home, after all my doubling and turning on the Pacific to the extent of fully half the circumference of the globe. As soon as we were certain that there was no mistake, all hands in the cabin proceeded, with nervous haste, to pack up clothes, books, and papers, and all kinds of odds and ends, to shave, dress, and civilize, and so forth, when we had the inexpressible mortification to find that the coast was still cased in its wintry barrier. About one in the afternoon, we entered the broken ice, forcing our way so boldly among the floating masses as to strike heavily and injure the copper; but, when we were within twenty miles of Cape Marican, we were obliged, to our great chagrin, to beat a retreat, and to await in patience the removal of the insuperable obstacle. This consummation, so devoutly to be wished, could only be effected, within any reasonable time, by a strong wind, for very

little good could be expected from the ordinary process of thawing in an atmosphere which had just compelled us to mount cloaks and great coats.

What a tantalizing situation was ours! If we could not get across the continent before the close of summer, we should be doomed to spend the broken weather of the autumn at Irkutsk, or perhaps some far worse place, till snow should again render the roads passable; and we, of course, did our best to persuade ourselves that our present delay was sure to make all the difference. If we had been advancing at any pace, we should not have despaired; but to lie like a log in the water, and to feel that we might continue to do so till the temperature, that made ourselves shiver, should melt the enemy, that was "the unkindest cut of all." We became, I am afraid, very bad company to each other; and, as if to overdraw our patience entirely, we were, at this unfortunate crisis, reduced from fresh provisions to salt junk.

To gain a more genial climate, besides varying the scene, we sometimes took a run out to the south, though the greatest heat that we ever attained did not arise to 40° of Fahrenheit, and that, too, in the beginning of our English July. The cheerlessness, however, of our position was, in some measure, counterbalanced by the shortness of the night. In fact, the two twilights, each almost rivalling the day, met each other; and I actually read a newspaper—an old enough one, in all conscience—with great ease at twelve o'clock.

The sea was singularly calm, seldom rising to a dangerous height, even for open craft, in any state of the winds. On the floating ice that passed our vessel we

saw great numbers of hair seals, doing their best to bask in the sun, which, when close to us, waddled into the water, and disappeared. In general, however, these creatures are so fearless, that they have been known to get on the decks of vessels lying at anchor in the roadstead of Ochotsk; and here, as well as elsewhere, they allow one to approach near enough to kill them with a club. Once we came within a hundred yards of a sleeping whale. We fired a cannon at him—not a very sportsmanlike proceeding, perhaps; but the shot, which was about a foot too high, merely aroused the monster, when he instantaneously dived. On one occasion, one of the Company's vessels is said to have struck one of these napping whales with so violent a concussion as to make every one suppose that the ship had run foul of a sandbank, while the brute, after being thus keel-hauled, was impotently lashing the water astern, apparently disabled for diving by his wound.

In our anxiety and distress, we thought of landing. But to the south of Ochotsk, where we might have found open water, the country was too rugged for travelling; besides that the one solitary settlement of Uoskoi was not likely to furnish either horses or guides; while to the north, where there was something of a practicable track—being, in fact, part of the Kam-schatka Road that runs round the gulf—the ice was still more hopelessly impervious than in front of Ochotsk itself.

The arrival of Sunday, as a variety in our existence, was quite a relief. Previously to the commencement of the service, Captain Kadnikoff read a paper, exhorting the crew to cleanliness, loyalty, morality, and reli-

gion; and, after this address was delivered, our Friar Tuck, having been made sober, or kept sober, to order, discharged his duties most admirably.

On the 23rd of the month, after we had been imprisoned nearly a week, we stood in, according to daily custom, towards the anchorage. As we advanced, we were delighted to meet a much greater quantity of floating ice than usual; and, by availing ourselves of every lane of open water, we succeeded, by half past eight in the evening, in reaching our port, having gradually reduced our soundings, till for some distance our keel was plunging up the mud from the bottom.

Ochotsk, now that we had reached it, appeared to have but little to recommend it to our favour, standing on a shingly beach so low and flat as not to be distinguishable at our distance from the adjacent waters. We saw nothing but a number of wretched buildings, which seemed to be in the sea just as much as ourselves; while, from their irregularity, they looked as if actually afloat; and even of this miserable prospect one of the characteristic fogs of this part of the world begrudged us fully the half.

As soon as we were in sight, we were boarded by a pilot, while a boat from the Russian American Company's establishment came off, bringing the latest news, both indigenous and exotic. As to local intelligence, one of the transports for Kamschatka, with her share of the annual supplies, had been wrecked; and four or five thousand loaded horses had arrived from Yakutsk, while five thousand more were expected. Then, as to more distant matters, the Queen of England, as I had previously learned in the roadstead at Honolulu, had pre-

sented the nation with a Prince of Wales; and my friend Baron Wrangell had been appointed principal director of the Russian American Company. I was sadly disappointed, however, to learn that the mail, which was to bring me letters from home, had not yet arrived.

As the hour was late, and as the anchorage was three miles from the town, we remained on board to sleep; and next morning, before daylight, Lieutenant Zavoika, the gentleman in charge of the Russian American Company's establishment, came off to our vessel, in order to convey us ashore in his own boat. We took leave of our kind friend Captain Kadnikoff with sincere regret; and, after making a present to the crew, we left behind us the good ship *Alexander* under a salute of seven guns, receiving, in about an hour, a similar mark of respect from the Company's post on placing our feet on the continent of Asia.

At the establishment, I had the pleasure of again meeting Madame Zavoika, a niece of Baron Wrangell, whom I had seen along with her husband, two years before, at the house of her noble relative in St. Petersburg; and we had thus an opportunity of renewing, at one end of the Russian empire, an acquaintance which we had commenced at the other.

As a point connected with our voyage, I ought here to mention, that, on the occasion of our first reaching the ice off the town, the *Alexander* had been seen from the shore, apparently standing on the frozen surface of the gulf; and, to verify the story, our informants had, at the same time, heard a shot, naming the very hour at which Captain Kadnikoff had fired a gun as a signal,

without, however, much expectation of its being noticed at a distance of thirty miles.

Our voyage of forty-four days had been somewhat longer than the average, for of late years the runs had generally ranged between five weeks and six weeks and a half. In earlier times, people used to deem themselves fortunate if they accomplished the distance from Sitka to Ochotsk in three months. But, in those days, the mere delay was only a part of the mischief. As the fine season, in these northern latitudes, begins with May and ends with August, the vessel, in order to accomplish both divisions of her trip, was constrained to take her chance of the heavy gales of spring and autumn; while the same causes that led to the delay, namely, craziness of build, and incompleteness of equipments, and unskilfulness of mariners, rendered her less able to face the tempest. Many ships used to be lost, some of them on the very bar of Ochotsk, on which a prodigious tide, practicable only in certain states during the finest weather, becomes doubly difficult and dangerous under the influence of any seaward gale. On one or two occasions, the whole of the valuable returns of the trade were sacrificed; and, on one of the outward voyages, the first religious mission for Russian America, consisting of bishop, priest, deacons, and various subordinate retainers, perished to a man. The latest loss occurred in 1838, when a vessel, making for Norfolk Sound after the stormy weather had commenced, was supposed, as some fragments of her were found in that direction, to have been wrecked near Mount Edgecumbe.

But all these losses were nothing, when compared

with the disasters that befell the original explorers of the Aleutian archipelago. The history of these hardy adventurers is an almost continuous narrative of strandings and founderingings. Nor ought this to be a matter of wonder, for, by reason of the extreme scarcity and exorbitant cost of all the requisite materials, but more particularly of canvass, and cordage, and iron, the ordinary craft, besides often taking their timbers from old wrecks, were tied together with thongs of skin, and rigged out with ropes and sails of the same unmanageable texture to match.

I cannot close this record of disasters more appropriately or more mournfully than by mentioning the premature fate of the manly and generous Captain Kadnikoff. Immediately on his return from Ochotsk to Sitka, in the autumn of 1842, he was sent with his good ship to California; and, on his homeward voyage, while lying-to in a tremendous hurricane, within an inconsiderable distance of New Archangel, he and all his crew, excepting the watch on deck, were literally drowned in their beds by a heavy sea, which broke over the vessel without causing her to founder.

CHAPTER XVI.

FROM OCHOTSK TO YAKUTSK.

Ochotsk—Madame Zavoika's horticulture—Food, health, &c., of inhabitants—Ship-building establishment—Courts and lawyers—Salt—Governor Golovin—Russians, and Ostrogs, and Cossacks—Shipwrecked Japanese—Disciple of Origen—Brick tea—Mr. Atlasoff's snow-shoes—Promiscuous bathing—Bargaining for horses with Jacob—Departure from Ochotsk—Forests of pine, &c., with swamp-tea—Jacob's policy—Mr. Shiloff's caravan—Fidelity and skill of Yakuti—Cossack's zeal and boastfulness—Spirit of the forest—Jacob's care of horses—Notes of cuckoo—Fourteen fords on horseback—Lord Byron and Captain Cochrane—Industry of Yakuti, as also hospitality—Dropping in of three friends to dinner—Cossack's discipline—Caravan—Mode of feeding horses in the night—Real hell of horses—Inundations—Threatened attack on the part of a bear—Country more fertile—Mail from Yakutsk, disappointment—Plant that intoxicates and disables horses—Mistake of Cossack—Inundations—Herds of cattle and caravans—Summer by day and winter by night—Superstition of Yakuti—Height of land, with a lake feeding both seas—Perpetual snow and ice—Caravans without end—Udoma crossing—Hardly any horses of a dark colour—Danger in pastimes from runaway convicts—New ice in middle of July—Valley of the Nalivnoi—Difficulty in ascertaining names—Wet St. Nicholas Day—Yakut's mode of estimating distances—Allack Youmi—Musquitoes—Moor fowl—Delays of travelling—Rein-deer—Ooloonach ferry—Scenery now softer—Swamps bridged with corduroy—The Aldan—Horses of Yakuti well trained—Kumyss—The Amga—The Capercailzie, snipe, and plover—Orclach—Traveller's book—Tshooropsa—Porotoffskaya—Visit from son of a Yakut chief—Tshetshiguiskaya—Temooloya—Locusts—Toolgyachtach—Lena and other rivers once much higher—Arrival at Lena—Arrival at Yakutsk.

The Company's post stands near the end of a tongue of land, about three quarters of a mile in length, and

one quarter of a mile in width, so little elevated above the level of the sea, that, when the southerly wind blows hard or continues long, the whole is almost sure to be inundated. The town lies about half a mile distant, situated on the left bank of the Kuchtui. It has stood on this site only for a few years, having formerly occupied a low point between the sea and the Ochota ; and it appears to have been removed just in time, for the river has, since then, formed the tip of the point into an island, sending the main body of its waters through this new channel of its own cutting. Even now the town is not secure, being subject, as well as the Company's post, to inundations in southerly gales.

The population of Ochotsk is about eight hundred souls, though, forty years ago, it amounted, according to Langsdorff's estimate, to about two thousand. The diminution is ascribed, and with great appearance of truth, to the circumstance, that the town has, since then, been supplanted, as a penal colony, by the mines—a change which the neighbourhood has had no reason to regret ; for the convicts, always the worst of their class, were continually escaping, to prey on the public, like so many wild beasts. Nor can the criminals themselves look back to Ochotsk with regret from any other place of punishment whatever.

A more dreary scene can scarcely be conceived. Not a tree, and hardly even a green blade, is to be seen within miles of the town ; and in the midst of the disorderly collection of huts is a stagnant marsh, which, unless when frozen, must be a nursery of all sorts of malaria and pestilence. The climate is at least on a par with the soil. Summer consists of three months of damp

and chilly weather, during great part of which the snow still covers the hills, and the ice chokes the harbour; and this is succeeded by nine months of dreary winter, in which the cold, unlike that of more inland spots, is as raw as it is intense.

In such a climate, spontaneous vegetation is hardly to be expected. I was equally surprised and pleased at the manner in which Madame Zavoika contrived to combat circumstances so adverse to horticultural operations. Towards the close of the winter, she had reared in hothouses a number of hardy vegetables, which, as the season advanced, she was gradually transplanting into the open air, thus producing for domestic use, besides a few flowers, a small stock of potatoes, cabbage, lettuce, and barley. In so short a summer—for dog-sleighing continues till the 1st of June—everything must, as it were, run a race to come to maturity; and, in reality, the growth of some plants is said to be so rapid under assiduous culture, and in a genial situation, that their progress, to the high gratification, of course, of the party interested, may be traced from hour to hour.

The principal food of the inhabitants is fish. The sea of Ochotsk yields as many as fourteen varieties of the salmon alone, one of them, the nerka, being the finest thing of the kind that I ever tasted. All the parts of a fish are turned to profitable account; the head is eaten raw, the belly smoked, the back salted, and the bones and offal are given to the dogs. Fish is the staple food also of cattle and poultry, as neither hay nor grain can be procured for their use in sufficient quantities.

All supplies for the table, fish alone excepted, are

ruinously extravagant. Flour, brought from the Upper Lena by way of Yakutsk, costs twenty-eight roubles a pood of forty Russian or thirty-six English pounds; beef, supplied by the neighbouring Yakuti, is so dear and so scarce as to be regarded merely as a treat; and as to wines and groceries, most of them tell their own story in the fact of their being burdened with the expense of an inland carriage of more than seven thousand miles.

On such fare and in such a climate no people could be healthy. Scurvy in particular rages here every winter. This is, in fact, the scourge of all these hyperborean regions, the absence or the feebleness of the sun in December and January being apparently sufficient to generate it under the most favourable circumstances of food, shelter, and exercise. It affects even sucking infants, while the very cattle suffer equally with human beings. It often proves fatal; but, if the sufferer, whether man or beast, survive the winter, both quadrupeds and bipeds find a remedy of Nature's own providing in a wild sort of onion or garlick.

Under all these disadvantages, however, the good folks of Ochotsk look brisk, with something of a military swagger in their air. They are evidently alive to the dignity of their situation, as being denizens of the only town within the compass of two or three European kingdoms. Nor are they likely to be soon deprived of this exclusive honour, for their harbour, bad as it is, is still believed to be the best on the whole of the Sea of Ochotsk. Captain Kadnikoff, however, intends this very season to survey what is called Jan Harbour, lying some distance to the south-west of Ochotsk; and if his

report of the anchorage be favourable, the Russian American Company will remove its establishment thither on account of the collateral advantages of the locality. The situation is said to be much more healthy than that of this town; the interior country is believed to be rich in sables and foxes, being well wooded and tolerably fertile; and, what is most important of all, the route to Yakutsk and back may, in a great measure, be accomplished by water.

The buildings are of wood, being most of them in a state of decay; even the principal edifices, the admiralty, the hospital, and the government-house, are scarcely habitable. As to business, the town is a mere place of transit between Yakutsk, on the one hand, and Kamshatka and Russian America, on the other, the grandest epochs in its year being the arrivals and departures of vessels and caravans. With the trade, however, of Russian America, the town, properly so called, has little or nothing to do, for the Company's own post, with a gentleman in charge, three clerks, a storekeeper, a pilot, and thirty-five labourers, is, in my opinion, far more than adequate to perform all the Company's work.

It is chiefly in regard to its connexion with Kamshatka, that Ochotsk possesses a ship-building yard. Considering how often the transports are lost, this establishment can have no sinecure of it; and there is now a vessel of about seventy tons on the stocks as a candidate for the next vacancy, if the recent disaster has not already made room for it. The pine is close in the grain and tough, and the carpenters do their duty well, so that the frequent losses must be imputed chiefly

to the incompetency of the officers and crews. Whatever be the cause, the inhabitants of Kamschatka are the sufferers, being forced to submit, as I have elsewhere stated, to the exactions of foreign adventurers for absolute necessities; and one cannot but regret that the Imperial government does not at once conclude the reported arrangement with the Russian American Company for conducting this branch of the service. Justice and humanity, however, have many vested interests to encounter. The functionaries in Kamschatka are, as a matter of course, instinctively hostile to the proposed measure; the Yakuti, who enjoy the monopoly, such as it is, of the inland transport between Yakutsk and Ochotsk, are represented as being likely to lose at least a part of their carrying trade; and, though last not least, the authorities of Ochotsk see that, in letting go their hold of Kamschatka, they will drift from their sheet-anchor.

So far as the Yakuti are concerned, their case is little better than a bugbear to serve the purposes of the other two parties, for, besides being nearly independent of extraneous aid through the instrumentality of their herds of cattle, they sacrifice vast numbers of their horses in consequence of famine and fatigue, so as greatly to diminish the clear proceeds of their earnings. The depth and thickness, however, of the official stake in the matter are certainly great, exceeding, in fact, all honest calculation. To cite an instance, the freight from Ochotsk to Kamschatka, as fixed at head-quarters, is not to be more than half a rouble a pood, while, as exacted on the spot, it amounts to fifteen roubles. Thus, in defiance of what is called the pervading will, the

servant's speculation adds 2,900 per cent. to the master's claim.

Of the machinery of justice, Ochotsk has fully more than enough. For the eight hundred souls in the town, and a remarkably scanty population in the adjacent country, there are, including judges and clerks of court, no fewer than forty limbs of the law. After making due allowance for the litigious disposition of the Yakuti, the place has evidently still too much of a good thing, even if only half of all that is said as to the extortion and corruption of the harpies be correct. I shall merely mention one instance, resting on undoubted authority, with respect to judicial misconduct, premising that the bar can hardly be expected to be more punctilious than the bench.

A woman of Sitka, charged, on the clearest evidence, with having poisoned her husband, was sent to Ochotsk for trial. She was committed to prison ; but the judge, struck with her charms, removed her from her cell to his own house, postponing the cognizance of the affair from time to time on one pretext after another. At last, when urged by the Russian American Company, he promised to proceed in the business, without, however, naming any day. Accordingly, one forenoon, the Company's agent was summoned to attend the woman's trial by mid-day at a place about three miles distant from the town ; but, before the prosecutor could reach the court-house, the judge, true to his time, had dismissed the case for want of evidence, and remanded the lady to his own hospitable domicile. In process of time, she has become the mother of half a dozen or so of incipient judges and embryo ladies of quality.

Formerly, salt used to be manufactured near Ochotsk ; but the works were soon abandoned, as the article could be procured, through the Russian American Company, from California at a much cheaper rate. By the by, when Captain Cochrane was at Petropaulosk, in Kamschatka, he found there a vessel belonging to Lihō Lihō, loaded with salt as a present from his Hawaiian majesty to the Emperor of Russia.

The Governor of Ochotsk, Captain Golovin of the Imperial Navy, has spent twenty years of his life in Siberia and Kamschatka, and bears a very excellent character. At the moment of my arrival, he was too busy at home to let his thoughts wander elsewhere, for his lady had just presented him with a little girl, who was ushered into the world under the same salute that greeted my landing in Asia. When this affair was made snug, Captain Golovin showed me much courtesy and attention, readily rendering me every assistance in his power. His jurisdiction extends from the Chinese frontier to the Bay of Anadyr, containing, in addition to the aboriginal population, about three thousand families of Russians. This peaceful district contains numerous *ostrogs*, or forts, garrisoned by a few Cossacks, who, by virtue of their descent from the original conquerors of Siberia, are at once the military and the police of the country. In their public capacity, these soldiers collect the yassack from the natives, being equivalent to six roubles a year for every male of twenty and upwards, while, on their own private account, they exact a much heavier tribute from the poor creatures, by dabbling in furs at their own prices.

At Ochotsk we saw the Japanese, of whom I had

previously heard at the Sandwich Islands. They were maintained at the expense of the government, and were waiting an opportunity to return home. Whatever the chapter of accidents might ultimately disclose, there was then no definite prospect that the unhappy exiles would ever reach the shores of Japan, or that, even if they should get that length, they would be allowed to land. On a former occasion of the same kind, the sailors, whom the Russians were restoring to their country, were driven off by their jealous government, an example which is not very likely to encourage Russia to repeat the attempt. The Japanese in question, wretched as their lot must have been in a strange land, and under an inhospitable climate, contrived to make themselves more miserable by disagreeing with each other; and, on a recent occasion, four of them had conspired to destroy the fifth, whom the authorities were obliged to send to prison, in order to preserve his life.

In the Russian American Company's stores I observed what is known as brick tea, being made up into cakes like Cavendish tobacco. This article is brought from Kiachta. Though coarse, strong, and ill-flavoured, it is consumed in great quantities by the lower orders in Siberia, being made into a thick soup, with the addition of butter and salt.

Of the habits of the good people of Ochotsk, save of their hospitality, I know but little. On the day of our arrival there was scarcely a soul to be seen about the place, all business being at a stand in honour of the anniversary of the emperor's birth: but the proper festivities were unavoidably postponed, as the anticipated

supplies had not arrived from Yakutsk. In summer, in fact, nobody goes out of the house without necessity. If the weather be fine, then the noxious vapours of the stagnant marsh are to be dreaded; and if the weather be not fine, then the rain and wind are to be avoided. In winter, again, the cold is too severe for much exposure, being of that raw, damp, disagreeable kind, which no clothes can keep out. Walking on snow-shoes, however, is a favourite pastime among the gentlemen; and one of the Company's clerks, Mr. Atlasoff,—a descendant, I believe, of the conqueror of Kamschatka,—thinks nothing at all of trudging eighty or ninety miles a day, having one winter gone from Ochotsk to Irkutsk on foot, a distance of nearly four thousand versts, or two thousand seven hundred miles, in order to visit his friends.

This performance quite beats that of a gentleman in the Hudson's Bay Company's service, who walked from Moose Factory to Red River settlement, to request my leave to marry a young lady, whose inclinations on the subject he had never taken the precaution to discover. Having obtained the required permission, he retraced his steps, and, with his authority all cut and dried for immediate use, made his formal proposal; but, to his infinite astonishment and dismay, the hard-hearted and ungrateful woman rejected his suit, while he could only console himself with the old song, "Sure she's daft to refuse the laird o' Cockpen." The snow, particularly on a long journey, proves very injurious to the eyes, almost always producing temporary, and sometimes permanent blindness; and, besides various other sufferers in this way whom I met, Captain Golovin had

nearly lost his sight from that cause. Speaking of the habits of the people, I heard of a custom, which would hardly be considered delicate or correct in England. Men and women, to the number, perhaps, of thirty or forty of both sexes, frequent one and the same bath at one and the same time; and so common is the thing, that it is regarded as a matter of perfect indifference.

Two days after my arrival, I despatched letters for England by the mail, which would travel much more expeditiously than I could, as each bearer would go only a specified distance, and then be relieved by another.

On the same day, I learned from a Yakut, that the roads were exceedingly bad in consequence of the unusual height of the waters. This state of things was very much against the comfortable and speedy prosecution of our journey as far as Yakutsk, though it might be favourable to us in ascending the Lena to Irkutsk, as facilitating the tracking of boats along the banks. The news were disheartening, for the track, at its best, would be a mere apology for a highway.

I had some trouble in procuring horses and guides, the Yakuti being inclined to drive a hard bargain; but, on being marched before Governor Golovin by a party of Cossacks, they agreed to convey us to Yakutsk in eighteen days, at the rate of forty-five roubles a horse, no load being to exceed five Russian poods, or a hundred and eighty English pounds. The leader and guide, an old fellow of the name of Jacob, was said to be worth forty thousand roubles, having acquired the greater part of his wealth by lending money to his less provident countrymen at usurious interest. Notwith-

standing all our precautions, our princeling,—for Jacob was a man of rank in his tribe,—had been too keen for us, inasmuch as the charge even for posthorses was only fifty roubles; while, in the case of animals that had come loaded and were returning, it hardly ever exceeded forty.

Considering that a horse costs only thirty or forty roubles, one is inclined, at first sight, rather to buy the nags than to hire them. But a little inquiry on the spot is sure to save a great deal of vexatious and expensive experience. Your cheap bargains may be unsound from the beginning; even if they are sound, they are seldom able to accomplish the whole journey; and even if they neither die nor break down, they are almost certain of being stolen. In addition to all this, guides and drivers must be separately paid; while, from having no interest in your cattle, excepting perhaps an interest adverse to your own, they may prove more troublesome than the very brutes themselves. As a general rule, a traveller, whether in Siberia or elsewhere, rarely promotes either comfort or economy by being wise in his own conceit.

On the 27th of the month, immediately after breakfast, we took leave of our kind hostess, Madame Zavoiika, and then, accompanied by Lieutenant Zavoiika, ascended the Ochota in a boat, to an encampment about ten miles distant, where we were to meet our princeling and his party. At this spot, which presented neither tree nor shrub to shelter us from the north wind,—always a cold one in these regions,—that was blowing, we found a caravan of about five hundred horses, just arrived from Yakutsk. Whilst we partook of a farewell

dinner with our hospitable friend, packs were arranged, harness repaired, and horses laden. Our little band consisted of my two fellow-travellers and myself, my servant, a Cossack, and three Yakuti, with about thirty horses.

Bidding adieu to our excellent host, we commenced our journey, riding about ten versts along the sea-shore, whence we obtained our last look of the good ship Alexander; and then, striking into the country, we passed through a miserable district of burnt wood, which, however, improved, as we advanced, into forests of pine, larch, willows, and alder, with abundance of swamp tea, such as grows in Labrador and many parts of the Hudson's Bay territories. Our progress did not exceed four or five miles an hour, Jacob being ready with the standing apology of all first days, that the horses, being fresh from the pasturage, must not have their bellies shaken. In all such cases, whether the excuse be well founded or not, the traveller, as there is no use in going ahead of his baggage, must of course acquiesce in the pace of the slowest quadruped in the caravan,—unless, indeed, he has a Cossack with him to argue the point in his own summary way.

During the afternoon, we met an apparently interminable line of about six hundred horses, carrying goods for Mr. Shiloff, a rich merchant of Ochotsk. The whole of the property was entirely under the charge of the Yakuti,—a fact which to me spoke volumes in favour of the carefulness, honesty, and fidelity of the tribe. In truth, I had already begun to see that, if not in a hurry, I should never desire better attendants on such a journey, for Jacob and his companions understood the

management of horses to a miracle, and were withal cheerful creatures, turning every incident into a rude melody to beguile their own toil, and perhaps also that of their cattle. But, pressed as I was for time, I should never have got on, more particularly as none of us wore uniform, without my Cossack, who, besides his own peculiar mode of infusing activity into all and sundry, supplied the place of a whole regiment of buttons and crosses by the most exaggerated representations of my rank and importance.

If there is anything in earth or air more formidable to these poor fellows than a Cossack, it is the "Spirit of the Forest,"—a personage invested, in their imagination, with almost unlimited power, whether for good or for evil. In the branches of the trees along the road were suspended numberless offerings of horse-hair, the gift being probably selected as an emblem of what the giver valued most; the extemporaneous songs seemed to be dictated by the hope of conciliating the great unknown; and, at supper, the first spoonful was invariably thrown into the fire to purchase a sound sleep from the genius of the place. As every locality has its own elf, the Yakuti, when on a journey, have no respite, soothing one object of terror after another, and only multiplying their tormentors as they increase their speed.

At the close of our first day, on which we had accomplished barely thirty versts, we encamped on a branch of the Ochota. After unloading the horses, the Yakuti tied them to trees for about an hour, in order to prevent them from eating or drinking while they were warm; and, having thus taken care of their cattle, they attacked their own pottage of rye-flour, butter, and sour milk,

not forgetting the libation due to the tutelary divinity of the neighbourhood.

Next morning we started at five, having taken a cup of tea to keep out the cold air. About sunrise, I had a pleasing remembrance of home and old times, in the notes of a cuckoo, a bird unknown in America, where I had passed about twenty successive springs. For fifteen versts, we pursued our way along the river, on the banks of which we had slept, through a tolerably pretty country; and then, after crossing the shoulder of a small hill over heavy roads of clay and bog, we traversed on horseback no fewer than fourteen fords, some of them deep and dangerous, of the Ochota and other streams. Though I could not appropriate to myself the boast of a former traveller in these parts, that "Byron swam the Hellespont, and John Cochrane the Ochota," yet I did sometimes anticipate the misfortune of being left by my horse to attempt part of the feat.

In the course of the day, we passed through several native settlements, with comfortable yourtes, or huts, one of them belonging to Jacob. On our stopping at the old man's house, the princess, by no means an uncomely person, showed herself; she was neat in her dress, and tidy in her domestic arrangements. The Yakuti appear to be very industrious, young and old, male and female, always occupied with some useful employment or other. When not engaged in travelling or farming, the men and boys make saddles, harnesses, and tethers; while the women and girls keep house, dress skins, prepare clothing, and attend to the dairy. The poor people, moreover, are remarkably kind to strangers; for milk and cream, the best if not the only

things that they had to give, were freely offered to us in every village.

Just as we were squatting down to dinner, three well-dressed gentlemen, attended by one of those indispensable Cossacks, rode up to us. They proved to be Judge Fish, a good-looking, sharp, and gentlemanly fellow, born in Petersburg of English parents, with the principal barrister of Ochotsk, a stout Siberian, whose countenance presented the reddest and most formidable crop of whiskers and moustaches, and the chief doctor of the same place, the most forbidding man without exception that I had seen for many years. These gentlemen had been holding a court at a village in the neighbourhood, this plan of carrying law to every man's door being absolutely necessary in such a country, and affording at the same time to the functionaries a safer field than a stationary tribunal for combining some attention to their own private interests, with a due regard for the public good. Very little ceremony was requisite to induce them to partake of our repast, to which the whole of them, particularly our medical guest, did justice, as if they had never done it before in their lives.

Parting with our friends, we resumed our course along the Ochota, for about twelve versts, to the little posthouse of Mitta. This place, in spite of the dignity of its appellation, was merely the shell of an old log hut, containing generally a few provisions for the use of passing caravans, though, to give the hovel its due, it did possess two rather pretty girls at the time of our visit. At this point, I was sorry to be obliged to make a disturbance with our princeling, who, to spare his horses, always found some pretext or other for moving

at a snail's pace ; while the Cossack gravely inquired whether he should not administer a dose of the whip for Jacob's benefit. In spite of my objections to the proposed measure, the man in authority dealt out two or three cuts, which certainly were of some service, for there was a visible improvement in our next stage. It was no wonder that we lost our patience with the old fellow, inasmuch as, when we encamped for the night on the Urick, we had been sixteen hours in the saddle for the matter of fifty versts, or thirty-three miles.

Near the Urick, the road ran over a hill, which, on this, the 10th of the English July, was still partially covered with its wintry garb, the atmosphere, of course, being very cold. From the ferryman we obtained some of the delicious nerka for our supper. During the day, by the by, we had met about three hundred horses laden with supplies for Ochotsk ; and altogether we found ourselves in much less of a wilderness than we had expected.

Next morning, being the third day of our travels, we lost about an hour and a half in collecting the horses. These animals, when turned loose to feed in the evening, are apt to stray ; but the Yakuti, knowing their haunts well, and having a keen eye to detect their track, rarely fail to follow the deserters on the right scent. One could not be surprised, if the quadrupeds should run away altogether out of the country. When compared with this corner of the world, England, which is sometimes said to be the hell of horses, must be contented with the secondary honour of being their purgatory. The unfortunate brutes here lie down to die, in great numbers, through famine and fatigue ; and this road is

more thickly strewed with their bones than any part of the plains on the Saskatchewan with those of the buffalo.

On either side of our path was a range of hills, while down the valley there flowed the Luktur, which we had occasion to ford repeatedly, following here, as well as elsewhere, the line of the crow's flight as correctly as possible, without regard to the windings of any stream. Though then an insignificant brook, yet the Luktur, like all the rivers of this region, is subject to sudden and violent changes, rising or falling several feet in a few hours. We saw a living proof, as it were, of this fact, in the remains of a platform, on which several Yakuti, after sacrificing much baggage and three hundred horses, had saved their own lives from one of these unexpected inundations.

While crossing a point of woods, we were surprised to hear loud shouts from some party ahead of us. Our Yakuti, however, returned the cries, while our horses, apparently as intelligent in the matter as their owners, grew very restive. To increase our perplexity, the fellows, who had begun the commotion, were now seen, still vociferating as loudly as ever, with a band of cattle scampering wildly before them; and our curiosity was soon tinctured with fear, when we observed our attendants making ready their knives for some desperate work. We did not know what to make of all this, till at length we perceived a huge she-bear and her cub making off, apparently as much frightened as any of us, at a round trot. We now ascertained that the bears are both fierce and numerous on this road; and, as the natives have no firearms, they let Bruin get pretty much his own way,

excepting that they do sometimes propitiate him, as if he were himself the "Spirit of the Forest," by all sorts of grimaces and obeisances. Two horses had been killed in the neighbourhood only the day before, very probably by the same animal that had caused the present alarm. Before the two brutes were out of sight, we passed the herd of cattle, the drivers riding the bulls with as much indifference as if they had been on horse-back.

The country had now become more fertile. There was no want of flowering plants; and the forests, moreover, were enlivened by the warbling of birds, which, accustomed as I had been to the death-like silence of American woods, was peculiarly grateful to my ear. We saw a large species of partridge, quite new to us, but not unlike the silver pheasant in its plumage; and we found several kinds of squirrels, the fur of some of which was said to be more valuable than anything of the kind produced in the new world.

In the course of the day we met the courier, who was bringing, as I had reason to believe, letters for me from England; but what was my disappointment on learning, what, in fact, I ought to have anticipated, that the bags could not be opened on the road. I felt as if doomed to pass my nearest and dearest friends, after a long absence, without exchanging words with them. The mail had been seventeen days out from Yakutsk, and was still at least two days from Ochotsk, making altogether the unusually long period of nineteen days; but the bearer, when attacked by me on the subject, accounted for the delay by a story of his having lost three days in one encampment, because his horses had

eaten a plant which intoxicated them, and rendered them unfit to travel. This plant, though its effects seem to be pretty clearly proved, is yet itself unknown. After taking the drug, the animal kicks and bites furiously for two days; and, unless ridden till he is in a foam again, and is ready to drop with fatigue, he generally dies of stupor on the third day.

On this, our third day, we made out sixty-two versts, fording eleven rivers, and encamping on the Porrick. Jacob had not yet forgotten his yesterday's taste of the whip, as administered by his official "friend;" and certainly, in such a country, forty-one miles between morning and evening were not bad travelling. In the course of the night, we nearly lost our Cossack, with all the incidental advantages of his military discipline. My servant, having injured his eye against the branch of a tree, had poured into a glass a little laudanum to be applied to the hurt; and the Cossack took an opportunity, when unobserved, to toss off the tempting beverage. But McIntyre, on seeing his comrade's wry faces, guessed the cause; and, luckily, an emetic was given in time to save the fellow's valuable life, turning his stomach inside out, to his infinite astonishment.

Next day, our road lay along the bank, and occasionally in the bed, of a river, descending from the Urrick Mountains, which was so full of windings as to require to be crossed every now and then from point to point. Where we encamped for the night, the stream was only a few yards in width, with a range of hills, apparently volcanic, on either side, while the intervening valley presented a breadth of four or five miles. This inconsiderable rivulet was said to be subject even to

more extraordinary inundations than the Luktur, already mentioned. Though now a mere thread of water, yet it sometimes fills the whole of its bed, which is upwards of half a mile broad, extending, moreover, nearly a mile into the woods on either side.

We met several herds of cattle and caravans on their way to Ochotsk. The caravans generally march at the rate of four or five miles an hour for twelve hours at a stretch; but the drivers never have occasion to use the whip, as the horses obey every call with alacrity. The animals are taught to travel in single file, a certain number being tied together by a rope from the tail of one to the mouth of another, and so on from front to rear. In this way, if one starts aside or falls, a violent twitching of mouths and tails ensues, till the driver, by shouting, and thumping, and pushing, and pulling, again brings the column into marching order. These quadrupeds appear to take things coolly, seldom or never sweating or drinking, even when travelling hard in hot weather.

The encampments along this route are both numerous and good; and, notwithstanding all that had been said against the road itself, I found it, when not absolutely in the bed of a river, very passable as compared with many roads that I had traversed. Amongst the caravans that we met to-day, was one with goods and cattle for the Russian American Company; and we learned that, in this caravan, two horses had been killed by a bear only last night. By this intelligence, our Yakuti were thrown into terrible consternation, while, being unable to defend themselves by force, they had recourse, like skilful politicians, to a con-

ciliatory method of proceeding. They bowed reverentially towards Bruin's favourite haunts with appropriate accompaniments, in prose and yerse, lauding his bravery and generosity to the skies, recognising him as their beloved uncle, and endeavouring by every means to coax him into forbearance. In addition to bears, the neighbouring mountains were said to abound in wolves and rein-deer, as also in the wild sheep so common in the Rocky Mountains and on the north-west coast.

At noon, the thermometer rose as high as 80° in the shade, the temperature being still very cool at night. In fact, one half of the four and twenty hours was summer, while the other half might have passed muster in England as pretty seasonable weather for winter. This, our fourth march, was about sixty versts.

On our fifth day, the first of the Russian July, we continued our march up the valley of our yesterday's river, generally riding across or along its very bed. We at length came to a steep mountain, at the foot of which the Yakuti chanted a short prayer to all and sundry the elves and fairies of the neighbourhood, invoking their aid, or at least their neutrality, in the ascent, while the bunches of horsehair, besides being here unusually numerous, were, in some cases, very neatly plaited. The top of this hill, which we reached about noon, with the help of the spirits and our Cossack, proved to be the height of land between the tributaries of the Polar Ocean and those of the Sea of Ochotsk, presenting a sheet of water about five miles in circumference, which, like the Committee's Punch Bowl in the Athabasca Portage of the Rocky Mountains, was said to send forth two rivers down the opposite slopes; namely,

the stream, which we had just traversed, towards the Sea of Ochotsk, and the Krestoffka, through the Mayo Fordoma, and the Aldan and the Lena, to the Polar Ocean. In the Mongol and Yakut tongues, which appear to be cognate dialects, this sheet of water is expressively distinguished as *Ciss Kule*, or Spine Lake. The country about the height of land was poor and dismal, inhabited by neither bird nor beast, and studded with large fields of perpetual snow and ice. The Urrick Mountains are a spur of the Stanovoi Chrebt, or great chain, that runs along the Chinese frontier. They are apparently of volcanic formation, being very rugged and sterile; they are, however, of no great altitude, not exceeding two thousand feet in height.

After crossing the height of land, we proceeded down the banks of the Krestoffka; and here my servant brought me a piece of mineral which appeared to contain a little gold. On inquiring, I ascertained that the Russian American Company had, some years before, established a gold mine in the neighbouring country on the Yana, but had soon abandoned it as not worth the working.

Our road was absolutely alive with caravans and travellers, all proceeding to Ochotsk with goods, provisions, and cattle; and of flour alone not fewer than five thousand loads had passed us before the close of this our fifth day. Among the travellers, we met Mr. Portnech, of the long-standing firm of Shelekoff, who had left Moscow in February, and was now thirteen days out from Yakutsk; also, a clerk of the Russian American Company, in charge of goods and supplies, and among them two coops of fowls and pigeons; and,

lastly, Mr. Molodish, the chief magistrate and principal merchant of Yakutsk, who, for the preceding twenty-five years, had made an annual trip to Ochotsk.

By nine in the evening, after eight hours of heavy rain, we reached Udomsky Krest, or the Udoma Crossing; and, late as it was, we passed the river, here about three or four hundred yards wide, in a canoe, having accomplished, in the course of the day, about sixty versts. At this place there were a storekeeper, or commissary, a postmaster, and six or eight Cossacks, with a few other people. Our military guardian, who rode on ahead, had represented us as very great men indeed, in spite of our plain clothes. Every body was more obsequious than words could tell. The commissary, who met us in full uniform, talked to us for half an hour, uncovered in the open air, notwithstanding all that could be said by me to the contrary, while all the subordinates doffed their caps at least a hundred yards before they reached us. They provided us with milk, bread, butter, fish, and meat, offering us at the same time good lodgings in the posthouse; everything was neat and comfortable, the women comely, and the children able to read and write.

We had an agreeable proof that the attentions of our friends emanated rather from kindness of heart than from servility of disposition. A traveller had been attacked on the road by inflammation of the lungs, brought on by drinking cold water while he was overheated; and the poor Samaritans had lodged the sufferer to the best of their ability, remaining with him day and night, and doing everything that humanity could suggest to alleviate his misery. One of my com-

panions relieved the patient by taking a little blood from him, while my other fellow-traveller, who had never previously witnessed such an operation, astonished the natives, by turning exceedingly faint, with an uncontrollable affection of both stomach and bowels.

Attached to the station was a small chapel, in which service used to be performed by any priest happening to pass that way. From this point, also, there was a communication by water with Yakutsk, which might be effected by descending the Udoma and the Aldan, and ascending the Lena; and, however circuitous the route might be, it afforded by far the best means of conveying such articles as could not be broken up into fractions of a horse's load, anchors, for instance, and cables, and the like.

In consequence of the barrenness of the immediate neighbourhood, our horses were sent to a distance of six versts for pasture, so that it was eight next morning before we took leave of our hospitable friends, who, so far from expecting to be paid, required much persuasion to accept a small sum of money as an acknowledgment of their kindness.

Having been here furnished, by order of Governor Golovin, with three fresh horses, for which no remuneration was demanded, we commenced our sixth day by entering a flat valley, bounded on either side by a low range of hills; while its surface, consisting of swamp, sand, clay, and stones, presented no other verdure than a little stunted timber. We crossed the beds of several rivers, which, though now dry, yet bore testimony to their occasional magnitude and force in channels of several hundred yards in width, strewn

with drift-wood. We followed the banks of Windy River as far as its confluence with the Nalivnoi, or Overflowing River; and after fording this latter stream, in which the current was deep and strong, with some difficulty we encamped early on the farther side, inasmuch as there was no other good pasturage within twenty versts. In the forenoon we had passed several extensive glaciers; but the latter portion of our march was more pleasing, being encircled by ranges of hills, which presented scenery more picturesque than any thing that we had seen since leaving the new world. Our day's work comprised twelve hours and fifty-six versts, the weather being fine and warm.

In all the caravans that thronged the road, I could not help remarking, that hardly one horse out of a hundred was of dark colour, the great mass being white or gray, with a few roan, or *cendré*. We met to-day two clerks of the Russian American Company, attended by a midwife and some fishermen, for Sitka. All the parties that we saw on this road were unarmed, and appeared to apprehend, with the exception, of course, of Bruin's proceedings, no sort of danger. But in former days, when criminals were banished to Ochotsk, travellers required to be always ready to defend themselves against the attacks of runaway convicts; for, as the distance was generally proportioned to the guilt, hardly any but the most ferocious wretches were sent so far to the eastward.

In proof of my statement, that we were now experiencing summer by day and winter by night, we next morning found that our yesterday's warm weather had been succeeded by ice of half an inch in thickness—

pretty well for the 15th of our English July. The scenery was dreary and monotonous, while the travelling was rendered equally tedious and disagreeable by our being continually obliged to cross the Nalivnoi, whose deep waters, being still fed by the melting of the snows, were as cold as charity. Though the stream in question hardly equalled the volume of the Thames at Richmond, yet its channel was sometimes a mile in width, while the drift-wood, that lay scattered from side to side, showed that the torrent must occasionally have needed all its room.

In the valley of the Nalivnoi were numerous glaciers, the largest of them, known as the Capitanskaia Sascka, being eight or ten miles in circumference, and eight or ten feet deep. The glare of the sun's rays in traversing these fields of ice was so painful, that, if long endured at a time, it would certainly have produced snow blindness; and for this reason, as well as for every other, we were glad to take leave of the bed of the Overflowing River, and, after crossing a range of low hills, to enter the valley of the Poperethnie. Here a tolerable growth of pine, poplar, and willow, afforded some relief to the eye after the snow and ice which we had just left behind us, though the glaciers, to do them justice, here and there bore a budding willow, whose root, to all appearance, must have been buried in eternal frost.

Let me here mention, once for all, that I encountered great difficulty in trying to ascertain the correct names of the rivers, mountains, &c., that we passed. The Cossack could not always recollect them, if he ever knew the whole of them; and Jacob, if interrogated

on the subject, was so vague and loquacious, as to render confusion worse confounded.

Caravans still thronged the road; and we accomplished about sixty versts to-day, in fifteen hours.

Our eighth day, the 4th of July, carried us through a region resembling that of yesterday in almost every particular. We rode up the valley of a stream, called in the Yakut language Yagetlog, in the Russian Dolgoyu, and in the English Long River; and glaciers were still as frequent and as troublesome to the eyes as ever. Curiously enough, the snow lay on the side of the mountain that faced the sun, while the slope that had the colder exposure was generally bare, the apparently unaccountable contrast having doubtless been caused by the fact, that the southern declivity had been sheltered from the prevailing winds of winter, which had swept the northern one at pleasure, forming heavy drifts on the opposite side.

We dined at a place called Baarag, treating ourselves to a little of our pemmican, the best, if not the only dainty of the kind that was ever seen in Asia. We crossed a large stream, called the Ancha, along the banks of which we pursued our way till we encamped for the night, at half-past ten, having completed about fifty-six versts during the day.

We had still continued to meet caravan after caravan. On asking one of the leaders at what time he had left Yakutsk, we were told, "On wet St. Nicholas day." On inquiring still farther what this could mean, we found that the patron saint of the empire, to mark his superiority over ordinary saints, has two days in the calendar appropriated to his honour—a wet one in

summer, when his votaries are allowed to get as drunk as they like; and a dry one in winter, when they are expected to keep as sober as they can.

We also observed to-day the singular mode in which the Yakuti estimate distances. Taking as their unit the time necessary for boiling a kettle of a particular sort of food, they tell you that such and such a place is so many kettles off, or, as the case may be, perhaps only part of a kettle. In this neighbourhood, moreover, a spot was shown to us, where the last tiger of Siberia, killed about twenty years ago, was interred; and we were told that the bones of a camel, so fresh as not to be of any great antiquity, were to be seen near some of the adjacent hills. Farther, in this the valley of the Ancha, we saw another scaffold, on which a shopkeeper of Ochotsk, when overtaken by a sudden flood, was perched three days and nights, till the waters subsided.

On our ninth day we crossed many rivers, passing through a country similar in character to that of yesterday; but, as our horses were very much jaded, we halted early for the night, after only forty versts, at a posthouse on the Allack Youmi, which proved to be cleanly and comfortable. Here we got some provisions and a relay of horses.

Next morning, we started with our fresh cattle at five o'clock. Our country of to-day improved much in appearance, being generally well wooded, and often romantic; and we occasionally crossed hills, which commanded an extensive view of the mountains and rivers around. After travelling about our usual distance, we encamped at eight in the evening on a hill, which was represented to be the middle point between Ochotsk

and Yakutsk, thankful enough to have got this length in safety. Even in this cold region, however, we were tormented out of the better half of our sleep, as we were on many an occasion besides, by myriads of musquitoes, that most horrible of all annoyances during summer in every country of my acquaintance but England. By the by, the Yakuti used in such cases to kindle a fire, that the smoke, by driving away the intolerable insects, might enable their horses to feed to leeward, erecting at the same time a fence round the blaze, to prevent the animals from burning themselves in their impatience.

Our curiosities of to-day were neither numerous nor important. We passed the remains of several huts erected for the preservation of the goods of a caravan, which was here overtaken by winter two years ago; and near them the Bishop of Sitka had erected a cross, which, however exclusive the Russians might be in their veneration, the Yakuti, I fear, would at best place on the same level in their estimation with the "blue spirits and white, black spirits and grey." We happened to fall on a brood of moor-fowl, scarcely fledged, and, to the infinite grief of the mother, captured one of the young. This bird has a beautiful plumage, red over the eyes, the body dark brown with yellow spots, and the legs feathered. Of quadrupeds, we had not seen any specimens but a few squirrels, and the two bears that frightened our Yakuti out of their propriety. But, though the almost uninterrupted line of traffic, particularly in summer, does drive away nearly all animals from the neighbourhood of the road, yet there is said to be no scarcity of them at a distance. In

addition to bears, wolves, wild sheep, squirrels, and reindeer, already mentioned, there are foxes, sables, tiger-cats, and a goat called *kabargo*, which, without horns or tail, has a skin like the reindeer's, but with the hairs almost as stiff as bristles.

On our eleventh day, the 7th of the month, our road was even more rugged than yesterday; and, from the summit of the Nanukau, an eminence of about a thousand feet in height, we obtained a beautiful view of the mountains, that we had traversed during the two preceding marches, presenting, with their uniformly conical shape, the appearance of so many gigantic molehills. The descent of this eminence, paved, as it had been, by Nature with stones, of all the varieties of shapes and angles, afforded a painful and unsafe footing to the horses, while it suggested to the riders, in the event of a tumble, the most unwelcome and inconvenient imaginations. Beyond this, the mountains were of volcanic formation, presenting all the extraordinary forms so common to such regions, turrets, chimneys, dovecots, battlements, ramparts, heads, faces, monstrous noses, women sitting at spinning-wheels, &c.; and one of them, which rose about eleven hundred feet perpendicular from the bed of the Tsechovis, very much resembled the Thunder Rock in Lake Superior. We still occasionally rode over fields of ice, which contrasted strangely with the sultriness of the weather. As we had now passed all the caravans, the notes of the cuckoo were almost our only specimen of animated nature, excepting, of course, our own party and the musquitoes.

From the Nanukau, the road began to improve, and would, as we were glad to learn, continue to do so.

But, after all, considering the value of time in these hyperborean summers, it is inexcusably bad. Most travellers, I believe, occupy nearly a month on this journey; and caravans occasionally consume thrice the period in question. The gentleman lately in charge of the Russian American Company's establishment at Ochotsk was last year overtaken by winter at our yesterday's station, and had there to loiter away forty days, until he could resume his journey in a reindeer sleigh. The reindeer, harnessed two abreast to vehicles carrying the driver and one passenger, are said to perform a hundred versts a day, though, on a long journey, their daily average ought not to be allowed to exceed fifty or sixty versts. On pressing occasions, however, they have travelled from Ochotsk to Yakutsk in eight days, being little more than half the shortest time in which horses have ever accomplished the distance. Why this difference? Chiefly, of course, because the reindeer, with its spreading hoof, a kind of natural snow-shoe, finds a good path, as the gift of Nature, over the softest drifts, while the horse everywhere encounters a bad road, through the fault of man.

We halted for the night on the Oomnas, after a fair day's work of about sixty versts.

Next morning, we followed, for some time, the course of the stream on which we had encamped, and then fell on the Swichtelach, or White River, said to be navigable for canoes to the Aldan. Crossing the Swichtelach at the Ooloonach ferry, where there was a post-house, we proceeded along its banks till a quarter-past ten, performing about seventy-five versts to-day.

The weather continued to be oppressively warm, with

a little thunder and lightning, which, independently of their intrinsic annoyances, threatened us, at times, with heavy rain—the greatest of all calamities in this region of glens and torrents. We had a palpable hint on this subject to-day, by passing a scaffold on which a clerk of the Russian American Company, when caught by a sudden inundation, had saved a valuable cargo of furs.

The scenery now began to lose its alpine character, the mountains flattening down to hills, the torrents sobering themselves into rivers, and the roads becoming level, while the landscape was rendered more cheerful by a variety of something like civilized plants, shrubs, and flowers, among which the wild rhubarb, represented to be of good quality, was particularly plentiful.

In some degree, however, the change in the face of the country merely altered the form of our difficulties. To-day, for instance, we crossed a swamp, bridged with corduroy, which was so full of gaps, from the gradual decay of the logs, as to be quite as dangerous, and nearly as impracticable, as the morass itself; and, to make ourselves miserable by anticipation, I found that Lieutenant Davidoff, Langsdorf's friend, and his party had left part of their baggage in one of these "Serbonian" bogs.

We dined to-day at a native village, of which the inhabitants were very hospitable. They were all active and busy as usual; and amongst their manufactures, I was particularly struck with their rugs, coverlets, and clothes, of the skins of horses, cows, and dogs, all so well dressed and finished, that they might have been elsewhere passed off as very tolerable furs. Notwithstanding the many defects in their character, I could

not help liking the Yakuti for their industry, cleanliness, and kindness ; so that I was really grieved to-day to see the Russian of our party do Cossack's duty on our guide, Jacob, merely because one of the horses, having taken fright in the woods, had knocked off its load. I had altogether taken a fancy to this old man, who did his best to please us, though his appearance certainly did not recommend him, being the counterpart—due allowance, of course, being made for the difference between man and beast—of the *chimpanzee* recently exhibited in London.

On the morning of our thirteenth day, being the 9th of the month, we, the passengers, pushed ahead of our little caravan, through sheer impatience. After crossing some deep morasses, we reached the noble river Aldan at half past eight, gaining two hours on the loaded horses in a run of eighty-three versts. Of the last forty-five versts, fully two-thirds lay over pieces of corduroy road, so rotten and open that the animals frequently caught their legs between the logs, giving several of us severe falls ; but we had reason to be thankful that we got off so cheaply, for, what with the swamps themselves and what with their bridges, travellers had often lost two or three days in doing our work of four hours and a half. During the day, we had a remarkable instance of the training of horses among the Yakuti. One of our fellows had fallen in the track, while the nags behind were advancing at a quick pace ; and each animal, as he reached the man, jumped over him, at the word of command, with the docility of a dog.

As we approached the Aldan, the improvement in the

appearance of the country was more rapid. The path was enlivened by various kinds of trees and abundance of flowering plants, while hares, rabbits, and partridges were numerous. The wild rhubarb was still common; and at the Poperethnie Ferry, kept by a Yakut, I noticed its stalks and leaves steeped in water for the purpose of fermentation, to be afterwards boiled with milk and rye into a very excellent pottage. In summer, the Yakuti live chiefly on rye and milk, mixing therewith as much grease as they can get; but in winter they fare more sumptuously, having plenty of beef, horseflesh, and venison. They have most enormous appetites, when put to their mettle in that way; and, in fact, they esteem a man, all other things being equal, in proportion to the capacity of his stomach. At this same station, I saw the remains of an old gun, the only specimen of firearms that I had seen in Siberia.

Even here, at a distance of fifteen hundred miles from the sea, the Aldan is about three quarters of a mile in width, and contains an immense body of water. At the crossing place the banks are low, but elsewhere are lofty and picturesque. At the ferry there were several buildings, with a ferryman, a storekeeper, several other civilians, and five of those everlasting Cossacks in uniform; and, whether for ornament or use, a sentry appeared to be constantly kept at the door of the depôt of provisions. In addition to this civilized settlement, there was also a village of Yakuti, under a princeling such as our own Jacob. These princelings have certain specified duties to perform, being appointed over districts as channels of communication between the natives and the authorities. They correspond pretty nearly with

the elders of villages, as known among the Russians themselves.

On the sides of the houses, which were much dilapidated, traces of a recent inundation were observable, and the flood had carried away five dwellings and a store, while the people had saved themselves by taking refuge for seven days in the garrets of such buildings as stood firm. All rivers that run to the north are peculiarly liable to overflow their banks in spring, because, while above they are swollen by the melting of the snows, they are still beset towards their mouths by their wintry barrier; and, in fact, the deluge, of which we discerned the symptoms, had been directly, though remotely, occasioned by the ice that dammed up the Aldan from below.

We crossed the river in boats, though there were also in use canoes of birch bark of the same peculiar shape as those on the *Pend' d'Oreille* River, near Fort Colville, excepting that the Yakuti employed a double-bladed paddle like the Esquimaux and Aleutians. These canoes also serve as coffins, in like manner as among the Chinooks and other tribes of the American coast. Having all got safely across, we encamped on the left bank, where there was one house, at half past eleven, the sun's rays being still visible even at this late hour.

Learning that the road would be very much better, I determined, more particularly after the success of our experiment of to-day, to push on ahead of our baggage all the way to Yakatsk, still distant three hundred and fifty versts, hoping, by this arrangement, to see whatever was to be seen, and to get everything ready for proceeding up the *Lena*, before I could otherwise well

finish my journey at our present rate of progress. Having formed this magnanimous resolution, we made a hearty supper of eggs, meat, and milk, turning in for the night as late as half past one.

In the morning, after having been detained at the station by various circumstances till eleven o'clock, we started with fresh horses, accompanied by two Yakuti, and also, to Jacob's great delight, by our Cossack. Everything conspired to put us in good spirits. The single house, with all its contents and appurtenances, was in perfect order; the old soldier, by whom it had been kept for thirty years, attended us in full uniform, with his sword by his side; and though he spoke with a superfluous amount of solemnity, and looked more profoundly wise than perhaps he was, yet he gave us the most solid proof of his real hospitality in no fewer than five different kinds of fish, *kirish*, *byelaya ruiba*, *stirlitz*, *pike*, and *okun*. These fish are taken in nets of horse-hair and sinew, as also by hooks and with baskets, the last articles being of the same sort as those used in the Columbia River.

Speaking, by the by, of the materials of these nets, the horse is to the Yakuti what the walrus is to the Aleutians, their best friend in a great variety of ways. Besides being sold, as a whole, for a price, his labour earns money for his owner; his flesh is used as food; the hide of the inner part of his thigh makes waterproof boots; while the rest of his skin is formed into cap, shirt, and trowsers; and lastly, as we have just seen, his mane and tail become the means of drawing fish out of the water. Over and above these multifarious services of the animal in general, the mare in

particular yields milk, which, when fermented into the indispensable *kumyss*, supplies a portable substitute, slightly spirituous and very palatable, at once for meat and for drink.

Our first stage of twenty-nine versts to Natchinsk was accomplished, chiefly at a gallop, in three hours and a half. This station was kept by some Yakuti, whose hospitality knew no bounds; they were comfortable and independent, possessing abundance of cattle and horses. The kindness of these people has an opportunity, which it never fails to improve, of putting its best foot foremost. To give warning of the approach of travellers, the postboys have bells attached to their stirrups, aiding the jingle with all sorts of shouting and bawling, so that, before we arrive in our own proper persons, the house is swept, the fire lighted, and the floor carpeted with sprigs of pine.

After an hour's rest, we travelled to Amginsk, beautifully situated, as the name alone would imply, on the Amga, accomplishing seventy-eight versts in all—pretty well for a day that began only at eleven o'clock. The stream was about the size of the Thames above London; and its clear and placid waters afforded a delicious bath after our hot and dusty ride. Here we made a supper of milk, rye-bread, and horseflesh, and slept in our clothes on branches of pine, with our great coats for coverlets and our saddles for pillows.

We were truly glad to learn that from Amginsk we had but one small stream to cross all the way to Yakutsk, and as there were posthouses at every thirty or forty versts, horses could be frequently changed, the hire being eight kopecks a verst for each horse, or something

like five farthings a mile. We now, therefore, had got rid of nearly all our troubles, excepting, perhaps, a few swamps with their corduroy roads.

During the day, we had seen a great number of birds, and, in addition to those previously mentioned, there were the capercailzie, or cock of the woods, the snipe, and the plover.

Our fifteenth day, the 11th of the month, was our first uninterruptedly pleasant march. We performed eighty-one versts, generally at a gallop, with good horses, through a country which on all sides exhibited signs of civilization and comfort. The landscape, besides its undulating character, was beautifully varied, consisting of copses of wood, lagoons teeming with wild-fowl, and prairies covered with countless herds, the whole subdivided into separate farms, each with its own homestead, by fences and landmarks. Some of the prettiest spots were consecrated to the dead, each body having a wooden tomb over it, with a cross at either end.

The natives were busily engaged in making hay for their cattle, but for the cattle only, the horses being left all winter to shift instinctively for themselves by scraping away the snow. They were mowing with a scythe of peculiar form, which they swung very awkwardly over their heads, chopping the grass rather than cutting it. The carts for conveying the hay to the farmyards, where it was stacked as in Europe, had runners instead of wheels, being not unlike the vehicles used for the same purpose in some parts of the Highlands of Scotland.

How happy, thought I, would it make me to see some

of the poor savages of North America thus devoting their lives to peaceful industry, and enjoying all the comforts of a pastoral existence! In many parts of their country, they might well be as comfortably settled, if they would shake off their indolent love of the chase, not only as a means of obtaining subsistence, but even as a pastime.

Though the roads were generally good, yet there were a few patches of corduroy, essential enough in wet weather, but at present worse than useless. While at full gallop over one piece, our Cossack had a heavy fall, which, though sufficient to have knocked him to pieces, merely cut his hand and dislocated his finger. The stations of this day were kept by Yakuti, being all, with one exception, characteristically clean and tidy. But Orelach, where we remained for the night, was so filthy and uncomfortable, that I registered a formal complaint in the book which was attached, according to custom, to the table of the posthouse for the purpose of receiving the critical remarks of travellers; and I had no doubt that my entry, when it reached the proper authorities, would be beneficial to future passengers on the road. To render our situation still more disagreeable, we had some fellow-lodgers of a very questionable description, in the persons of five convicts, three men and two women, proceeding to Ochotsk, under the charge of three Cossacks. These wretches had the look of regular cut-throats; their very faces, even without such temporary ornaments as black eyes of each other's making, were sufficient to condemn them. What with the broils and uproar of these outcasts, and what with the familiarities of fleas and mus-

quitoes, we passed a most restless night at Orelach, being the less able to bear the infliction with patience, as we had been kept awake the night before by the visits of uncomfortable bedfellows.

In one of the houses which we had entered to-day, I observed a child swaddled in a bag, which was attached to a board, the whole being a counterpart of the cradle used among the Indians of North America ; and, on the same occasion, I noticed also an earthen vessel of native manufacture, employed in boiling some mess or other.

Next day, being the sixteenth of our journey, we made our best march to the full tale of ninety-eight versts, the country still well settled and the people all engaged with their hay. Considering the length of the winter and the number of the cattle, the requisite quantity of provender must be very large, large enough, one would suppose, to occupy the whole of every man's leisure in each summer ; and yet, to show foresight, and economy, and industry, in one and the same instance, we saw many stacks of hay several years old still uncut, while the owners were toiling at the new crop as steadily as those who had no other resource against the ensuing season. On some of the farms, individuals, more laborious than even their neighbours, had attempted, but in vain, to grow rye in spite of the climate.

Excepting that they were liable to be now and then knocked about by a Cossack, these Yakuti appeared, according to the simple tastes of Nature, to lead an enviable life. As to necessities and comforts, they had most of them at their doors ; and as to the luxuries of tea and snuff, they possessed, to ali

appearance, ample means of purchasing a sufficiency of the same.

The country between the Aldan and the Lena appeared to have once consisted almost entirely of a chain of lakes. The prairies were generally surrounded by rising grounds, on which the traces of water were visible to a height varying from thirty to fifty feet, while most of these natural enclosures still contained small pools in their centres. The banks were mostly covered with pines, while the bottoms presented willows and poplars and other trees indigenous to an alluvial soil, with intervening glades of the richest pasture.

Before starting from Orelach in the morning, I was much entertained by watching the emotions of a Yakut damsel with respect to what appeared to me to be a very small matter. Our kettle, which contained some rice that had been left at supper, attracted her attention ; and she was evidently waiting an opportunity for appropriating the luxury as a perquisite of office, when one of my fellow-travellers, who had been too fatigued to eat anything the night before, made his appearance on the stage with recovered appetite. If he had seated himself at once, with a determination to finish the job, he would at least have saved the maiden the pain of suspense. But no ; he would only nibble at the rice, as if he was always more likely to stop than to proceed, while the countenance of the fair expectant passed through all the phases between disappointment and despair, as she saw mouthful after mouthful of the treasure vanish till the kettle was clean. The scene would have been a study for a painter, being all the richer from the circumstance, that the principal performer kept chewing

away, unconscious of the little melodrama of which he was the author, ignorant alike of the girl's distress and my amusement.

From Orelach, our first stage was thirty versts to Tshooropsa, being accomplished in two hours and twenty minutes. At this place, the Russian postmaster was out of the way, having left very agreeable deputies in a pretty daughter of his own and some good-looking native women, with whom, laying aside our dignity for a moment, we played a game of romps, to the uproarious delight of the ladies. Thence a stage of thirty-three versts brought us in two hours and forty minutes to Porotoffskaya, where, after our forenoon's work, we made a hearty breakfast on cream and biscuit. After this refreshment we enjoyed great benefit from a siesta during the heat of the day; and, again starting at four in the afternoon, we proceeded to Tshetshiguiskaya, thirty-three versts in three hours, where we met another of the monthly mails on its way from Yakutsk to Ochotsk. On the last instalment of our ninety-eight versts, the horse of one of the party came down, throwing his rider like a sack of sawdust to a considerable distance; but, strange to say, both man and beast escaped unhurt, though exposed to the danger of being trodden under foot by every one of those in the rear, following, according to custom, close behind in single file. Speaking of accidents, I observed that the guide invariably selected the best animal for his own use; and I would, therefore, advise every traveller, if any of the readers of this book should ever take an airing in these regions, to make prize of the horse of the man's choice, as at once the pleasantest and safest in the stud.

In the course of the evening, we were visited by the son of one of the most respectable of the neighbouring Yacuti, the old gentleman himself, who was said to be worth five or six thousand pounds sterling, principally in cattle and horses, being then absent at Yakutsk. This youth rode a beautiful steed with gay trappings; and the saddle in particular was mounted with an alloy of silver and copper wrought by the natives themselves, who were skilful in this way even before they had any communication with the Russians. In addition perhaps to a lurking desire of exhibiting his charger and its showy appointments to strangers of our supposed consequence, the young cavalier's object was to render us any assistance in his power; and he brought with him some berries, several pieces of bread, a few knives and forks, and such other little things as, in his opinion, were likely to be useful. We felt highly gratified by this Yakut's courtesy and attention, though, in point of fact, we hardly stood in need of anything, for, both in board and in lodging, we had discovered that Nature really was contented with what she could get. We enjoyed milk and rye bread at breakfast, milk and rye bread at dinner, and milk and rye bread at supper, for hunger sweetened our homely fare; and at night our wearied limbs converted a few branches of pine into beds of down.

Next morning, being the 13th of the month and the seventeenth of our journey, a ride of thirty versts carried us in two hours and fifty minutes to Temooloya, where we breakfasted. Here were two invalids, the postmaster's daughter, who had lost her sight four years before through neglected inflammation of the

eyes, and a native man, who had been deprived of the use of his right hand and left leg by an attack of paralysis.

In the neighbourhood of this station, the country had suffered much from the devastations of the locust, said to be of the same species as that known in Egypt. The grass was cut down as if mowed, so that the Yakuti were afraid that they would not be able to gather the requisite supply of hay against the winter. These insects had often made their appearance before, generally in dry seasons like the present. I was personally aware that a man might as well expect to reap after the fire and sword of a vindictive enemy as after the locust, for the crops at Red River Settlement had, for some years together, fallen a prey to this merciless and irresistible scourge of the husbandman.

After breakfast, fifteen versts more conducted us to Toolgyachtach, where, after filling ourselves with iced milk, we took a siesta of three hours. From this station, passing through a sandy district, we ascended a hill overlooking the course of the Lena, and commanding the sight, at the distance of twelve or fourteen versts, of the spires and cupolas of Yakutsk. After a toilsome progress of seventeen days, through an inhospitable and almost impassable wilderness, the prospect of a large town, with all its signs of civilized life, was a change as agreeable as it was sudden. The height whence we gained this first glimpse of rest and comfort, was two or three hundred feet above the level of the plain below, being part of a ridge which extended on either hand as far as the eye could reach, while a similar ridge, on the other side of the town, formed the opposite boundary of

the valley. These ridges, which at present served as natural barriers against the inundations of the stream, were most probably, at one time, the ordinary banks of the river.

To a physical certainty, all the waters of Eastern Siberia must once have been considerably higher than they now are. From the Lena to Behring's Straits, the shore of the ocean is, for the most part, so low and flat as to be scarcely distinguishable in winter from the adjacent ice; while, at the distance of a few versts inland, a line of high ground, which runs parallel with the coast, presents a great quantity of decayed drift-wood. When the sea was higher, the rivers must have been proportionally higher too. In fact, almost every stream furnishes, on its own behalf, direct evidence of the inference in question. The Indigirka, at a distance of thirty versts from its mouth, is said to have contained much drift-wood, such as the sea alone could have deposited; and the banks of all the inland waters in general present, among the higher latitudes, regular alternations, in horizontal strata, of ice and soil.

All these phenomena seem to imply not a gradual, but a sudden, retreat of the ocean, for, otherwise, drift-wood would have been found on the Indigirka all the way to the present coast, and the moisture of the banks, if the lakes and rivers had shrunk by inches, would imperceptibly have oozed from the chaos so as to leave only dry land behind it. This sudden retreat of the ocean cannot be otherwise explained than by supposing that an isthmus, occupying the position of Behring's Straits, had been swept away by the pressure of the waters,—a supposition which is directly strengthened

by the inclination of the arctic shore on either side, from Icy Cape downwards on the east, and from Cape North downwards on the west, as also by the shallowness of the soundings, never exceeding, it is said, thirty fathoms, along the whole breadth of the channel.

At the foot of the hill we found fresh horses, forwarded for our use by the agent of the Russian American Company; and a ride of five versts brought us to the ferry of the Lena, where an officer of police, sent by the Governor of Yakutsk, had been waiting for two days to welcome our arrival, which our new friend and ourselves accordingly celebrated, with great hilarity, in our own best glass of wine. After a swim in the river, which served to wash off the dust of the day's work, we spent an hour and a half, even with two sets of rowers to relieve each other, in crossing this sea of fresh water. The stream is of a brownish colour, though, as it passes over a bed of sand, it is not turbid; and it is studded with willowy islands and naked sands.

The Lena is one of the grandest rivers in the world. Even here, at a distance of twelve or thirteen hundred versts from the sea, it is about five or six miles wide; and its entire length is not less than four thousand versts. Of all the streams in this country of the first class, it is the only one that flows exclusively through Russian territory. The Oby and the Yenissei have each one or more of its principal sources far within the limits of Chinese Tartary; but the Lena, properly so called, is separated from the celestial empire by the valley of the Angara, a purely Siberian tributary of the Yenissei, a valley which, curiously enough, even overlaps it ten degrees to the eastward, while the Lena's main auxiliary,

the Vittim, is so far from itself crossing the frontier, that it is robbed, as it were, of some of its own waters by the more northerly feeders of the Amoor. Under these circumstances, the Lena, if estimated by the crow's flight, is undoubtedly the shortest of the three, though, if measured by its windings, it may perhaps equal, or even surpass, either of the others. Its very name, which expresses laziness, implies the circuitous character of its course; and, though such name was applied only to a part before the whole was explored, yet the mere fact that its sources fell short of the central chain of mountains, would in itself suggest the general applicability of the appellation in question.

On arriving at the west side of the river, we were met by a party of Cossacks, who helped us up a steep bank of sand, where we found three droskies for ourselves, and some carts for our baggage, all forwarded by the Governor; and, on reaching the town, we were received by the head of the police, who conducted us to a well-furnished house that had been prepared for our reception. As I was a good deal fatigued, to say nothing of the lateness of the hour, I deferred, till next day, the duty of paying my respects to this kindest of all governors, and thanking him for his evidently hearty politeness. In the evening, however, I had the pleasure of seeing company at home, in the person of Mr. Shagin, representative of the Russian American Association.

Thus was our journey from Ochotsk to Yakutsk completed on the seventeenth day, without any accident or loss. The distance was estimated at nine hundred and forty-six versts, which, at the rate of three versts to two miles, would amount to six hundred and thirty

miles. But at Yakutsk I was informed that, to the east and north of Irkutsk, the versts were of the old standard, which bore to the new the proportion of seven to five; so that we had actually accomplished about eight hundred and eighty of our own miles. If this information was correct, then, on our last march but one, we had told off before night nearly ninety-two miles; and, even at the modern standard, sixty-five miles, the equivalent in that case, of ninety-eight versts, were not an idle day's work.

CHAPTER XVII.

YAKUTSK, AND VOYAGE UP THE LENA.

Revenue and Population—Temperature—Agriculture—Site of Town—Fur trade and Ivory trade—Governor Roodikoff—Mr. Shagin—Native working in metals—Gluttony of Yakuti—Social factions—Hospital—Buildings—Curiosities—Departure from Yakutsk—Bestach—Passenger boats—Stolby—St. Elias—Condition of Peasants—Marchinskaya—Mr. Atlasoff—Reindeer—Stranded in a squall—Solianskaya—Olekminsk—Mr. Atlasoff's hospitality—Siberian conquests of Cossacks—Horticulture—Sables of the Olekma—Berdinskaya—Chase and capture of Yakuti—Cossack's discipline—Wild fruits—Condition of Peasants—Hurrah Rocks—Heavy bateau—Water-sails—Kamenskaya—Condition of Peasants—Yerbinsky—Pooloodoffskaya—Treatment of Criminals—Vittimsk, Sables and Talc—Tungusi—Aborigines in general—Boat upset—Character of Women—Doobroffskaya—Echo—Checks of the Lena—Echo—Wild fruits—Routine of existence—Our Saviour's Name-Day—Grand ball—Return of English letters from Ochotsk—Condition of Peasants—Goïtres—Alexeyeffskaya—Cossack's irresponsible cruelty—Kirensk, sleepy-headed officials—Adventure ashore—Soberskaya—Nettle kale—Oolkanskaya—Beasts of prey—Character of Peasants—Inundations—Condition of Peasants—Snuff—Kosarki—Oostooskaya—Progress of Cossack Conquerors—Oostuginskaya—Figoloffskaya.

Yakutsk is the capital of the district of the same name. The revenue of this division of Eastern Siberia, which does not equal the expenditure, consists chiefly of about six hundred thousand roubles of yassack, and of two hundred and twenty thousand roubles, paid for the exclusive right of selling native spirits. The aborigines, consisting almost entirely of Yakuti, amount to

about two hundred and forty-eight thousand souls, while the white population, including the Cossacks and all other servants of the government, does not exceed one fiftieth part of the number. Such of the Russian inhabitants as do not discharge any public function, live chiefly on the banks of the rivers, the natives, however, being scattered, particularly in the more southerly parts, wherever horses and cattle can find suitable pasture.

The town contains nearly half of all the whites of the district, with perhaps a couple of thousands of Yakuti and half-breeds. There are about four hundred dwellings, laid out into wide streets and spacious squares; and, as they are only one story high, and have outhouses and gardens, they cover, as one may expect, a comparatively large space. One of the squares is used as a bazaar, in which, according to the custom of the country, all the shops are collected. As to public buildings, there are seven churches, a monastery, an hospital, a barrack, and the ruins of an old *ostrog*, or fort. The grand material is wood, brought down the river from a considerable distance; for in the whole neighbourhood there is not one living stick of timber.

Yakutsk is situated on an extensive plain, in latitude 62° north, and longitude 130° east. The surrounding country is flat and uninteresting, having most probably once been, as I have already said, the actual bed of the Lena. Like the present bottom of the river, it is, for the most part, composed of sand; and, from this circumstance, the banks are so much at the mercy not merely of occasional inundations but even of the ordinary current, that the stream has advanced four versts in one direction, within the recollection of some of the present

inhabitants of the town. Nor is the climate of a more promising character than the soil. During the whole year, the cellars are said to be in a frozen state, and the wells to send up newly formed ice, for the heat of summer, excessive as it is, never lasts long enough to dissipate the effects of winter, to a depth of more than two or three feet. The extreme temperature of either season is almost incredible. The thermometer has stood in the shade at 33° of Reaumur, or 106° of Fahrenheit, while it has fallen in due time to 51° of Reaumur, or 83° of Fahrenheit, below zero, the difference being 189° of the latter standard, or nine degrees more than the whole distance between the freezing and the boiling points of water.

Some years ago, an experiment was made, under the direction of Baron Wrangell, by the agent of the Russian American Company, in order to ascertain the depth to which the ground is frozen. A well was dug, to the depth of three hundred and eighty feet; and still the earth was found to be as hard as iron. This result, however, would appear to be by no means satisfactory, inasmuch as the pit, being worked only in winter, on account of the foul air of summer, was necessarily exposed, season after season, to the renewed action of the frost. To test the state of the atmosphere in the well, we let down a small bundle of blazing straw, which, after gradually waning, was wholly extinguished at a depth of thirty or forty feet; but we were told that, at night, the flame would live twenty or thirty feet lower. As the temperature, in winter, was said to rise rapidly on descending from the mouth, till, at the bottom, it was only two or three degrees below the freezing point of

water, the excavation, if continued, would probably soon lead to soft ground; but, even then, the experiment would be unsatisfactory with respect to the state of the adjacent earth, for it would merely find a thaw of its own making. There is, on the whole, little reason for doubting, that the ground is frozen to an immense depth; for, under the uppermost yard, the frost never loses in summer what it has gained in winter. Even the ice of the sea, subjected, as it is, every summer to the action of the sun and the water, grows thicker from year to year, the first winter producing about ten feet, the second about five, and so on.

With such a climate, and such a soil, agriculture, of course, is out of the question. In two spots, indeed, rye is said to have ripened, though it is admitted to be altogether a precarious crop; so that, taking the bad seasons with the good, the curiosity costs more than it is worth. For supplies of agricultural produce, the inhabitants are dependant on the Upper Lena, and the country still farther to the south, great quantities of flour being brought even from Irkutsk and sold, after all, at the very moderate price of four roubles a pood, or a mere fraction more than an English penny for an English pound.

But of all these disadvantages, the Cossacks, who selected the site of Yakutsk, took no account. To those hardy adventurers, the far East was as much an object of ambition as ever the far West was to the pioneers of America; and it was doubtless under the influence of this aspiration, that they founded this metropolis of the desert, at the point where the Lena, after giving them twenty-five degrees of longitude for ten of latitude, began

to return to the west of north. If they had had a map to guide them with ease and accuracy, they could not have made a more definite choice; and, in fact, from the Ural to the Pacific, the Cossacks uniformly evinced a singular degree of judgment in seizing the best positions, whether for conquest or for traffic.

To this situation, Yakutsk was indebted for many elements of prosperity. The town lay in the direct route between the Yenissei and the Sea of Ochotsk, while it secured, after the loss of the Amoor, the exclusive and perpetual benefits of the intermediate transport; and it moreover formed the connecting link between the Lena and other rivers of the first class, on the west, and the Yana, and other streams of secondary magnitude, on the east. Through each of those two directions, Yakutsk became, in process of time, a place of transit to still more remote regions. By means of the Sea of Ochotsk, it was brought into contact with Kamschatka, the Aleutian Islands, and the North-west coast; and, by crossing the subordinate tributaries of the Arctic Ocean, it met the spoils of the new world, from the farther side of Behring's Straits, at the fair of Ostrovnoye.

But, independently of the advantages of being a place of transit, Yakutsk, in consequence of its position, was, from the beginning, a principal emporium of two valuable branches of commerce, the trade in ivory and the trade in furs.

At one time, Yakutsk engrossed nearly all the fur trade eastward, from the Lena to the farthest bounds of Russian enterprise, thus draining a territory, certainly more extensive, and perhaps not less productive, than

all the wilderness of British America ; and even when, through the instrumentality of a wealthy and powerful association, Kiachta and Moscow directly attracted the riches of the new continent, and of all the islands from the Kuriles to Kodiack, this town still held possession of a country of sixty degrees in longitude, by twenty in latitude, which contained hardly any other tenants than the hunter and his game.

With respect again to the other branch of commerce, Providence had seen fit, in some distant age, to deposit, in the very coldest region on the face of the globe, an inexhaustible supply of an organic substance, which all previous experience would have expected to discover only in tropical climes. The bones of the mammoth were found, in the greatest abundance, throughout all the north-western parts of Eastern Siberia. Spring after spring, the alluvial banks of the lakes and rivers, crumbling under the thaw, gave up, as it were, their dead ; and, beyond the very verge of the inhabited world, the islands, lying opposite to the mouth of the Yana, and, as there was reason for believing, even the bed of the ocean itself, literally teemed with these most mysterious memorials of antiquity. How did these bones come to be there ? On this interesting subject, the following views have been suggested to me by one who, confessedly ignorant of geology and comparative anatomy, looks at the thing, as he imagines, with an eye of common sense.

According to some opinions, the mammoth must have lived and died on the spot in a climate different from the present one, the remains of horses, buffaloes, oxen, and sheep, having also been found in great quantities on

the surface of one of the islands in question. But, unless the earth revolved, at the time of the milder temperature, on a different axis, similar evidence of a more genial state of things should exist, at least to some extent, in the same latitudes all round the globe. The entire absence, therefore, of all such evidence could be reconciled with this theory only by referring the whole of the phenomena to the flood, which could alone have affected, or rather have been the occasion of affecting, the earth's axis of rotation. On the sound principle, however, of not setting too many causes to work, this view of the case would appear to be fatal to the hypothesis of a change of climate, inasmuch as the direct operation of the flood might of itself be sufficient to produce all the result. The deposits under the sea could not be explained at all without the aid of some inundation or other, while, with respect to the deposits in general, the universal inundation must have taken its last sweep over the earth's surface towards the north.

Nothing else could so satisfactorily account for the geographical facts, that almost every peninsula points to the south, and that all the largest peninsulas are so many tongues of land running into the southern ocean. If one were to hazard a conjecture as to the precise course of the retreating deluge, perhaps the direction of the very meridians might be preferred from this circumstance, that the highest and the lowest latitudes of most of the great divisions of the land, such as Cape Taymoor and the southern extremity of Malacca, would be found to lie respectively in pretty nearly one and the same longitude.

But, if this were the true cause, why should not the

bones in question be found in other sections of the north? Even of this difficulty the face of the globe might afford something like a solution. That part of Tartary which lies to the south of the grand burying-ground of the mammoth, is the loftiest level in the world of any great extent, while the intermediate chain of mountains is said to be lower here than it is either to the east or to the west. Under these circumstances, the retiring torrent, which had had force enough to scoop out the southern hemisphere into a sierra of promontories, would meet no obstacle in the way of wafting the skeletons of its victims from the boundless steppes of Gobi, to be preserved in the eternal frosts of North-eastern Siberia; whereas, farther to the west, the physical impediments of less continuous plains and loftier ridges would not only tend to prevent any considerable accumulation of organic substances, but also to retain any partial deposits within the influence of a climate likely to occasion their decay.

To return to Yakutsk: nearly all the furs and ivory are sold in the annual fair, which is attended by troops of itinerant dealers from other parts of Siberia and also from Moscow. Even at this distance from their ultimate destination, the finer furs command an exorbitant price; some sables, by no means of the first quality, having cost me fifty roubles a piece. Throughout Russia, in fact, the skins of animals, from the sheep to the ermine, have always been rather necessities of life than articles of luxury. During the greater part of the year, they must be worn by every person, not for ornament but for use; and, as the more delicate varieties yield but a scanty supply, they are rendered far more

costly in proportion than the coarser kinds by the competition of those who regard them as badges of opulence and rank. The ivory again fetches from forty to seventy roubles a pood, or from one shilling to one shilling and ninepence a pound, according to its state of preservation. The tusks are found to be fresher as one advances to the northward—a circumstance which seems to corroborate the notion that the climate has had something to do with their continued existence in an organic form. Towards the same quarter, moreover, they are smaller and more numerous,—another circumstance, which tallies exactly with the physical fact, that in a current, larger and heavier bodies are more likely than others to sink or to be entangled; and it appears to be something more than a curious coincidence, that the bones of the smaller class, such as those of the horse, the buffalo, the ox, and the sheep, have been discovered only in the remotest north.

Soon after my arrival, I dined with Governor Roodikoff, the feast serving the double occasion not only of doing honour to the strangers, but also of celebrating the name-day of one of our host's sons. These name-days, which are kept in the Greek Church as well as in the Church of Rome, are, as I have already mentioned under the head of California, merely the days of those saints from whom the christian names of the parties may have been borrowed. These festivals are considered to be far more important than such secular affairs as the anniversaries of births, being peculiarly pleasant and profitable to public men. The Governor's saint, for instance, was to have his turn in the calendar on the 20th of the month; and the Governor himself would

then receive both from Russians and from Yakuti presents of furs and other commodities in proportion to his popularity—a guarantee, in some measure, for the good conduct of the higher powers.

At dinner, there were about twenty-five persons present, including Madame Roodikoff, with two daughters and as many sons, the heads of the police, both of district and town, the Hetman of Cossacks, the principal councillor, two doctors, and several merchants. The viands were numerous and excellent, consisting of soups, fish, beef, veal, fowls, wild and tame, the former in great variety, with pastry, sweets, and ices, and many other things besides, the whole accompanied by wines in abundance, and graced by a prince of a landlord.

Our good-humoured host, a captain in the Imperial Navy, had been taken prisoner at the Cape of Good Hope, in 1806, where he had been treated so kindly as ever afterwards to retain a friendly feeling towards Englishmen; and he had evidently resolved not to miss the present opportunity—one of the “few and far between” chances of the kind—of paying us back in our own coin. Though he spoke Russian at the commencement of the banquet, yet he launched out more and more boldly into such English as he could remember, with every succeeding round of champagne; and, in fact, the glorious old sailor dealt bumper after bumper with such rapidity, that I was fairly driven to rebel against his orders. We accordingly adjourned to the smoking-room; but the change was of no avail, for the enemy followed us to our place of refuge, continuing its explosions till “all was blue.”

A siesta of two or three hours prepared us for meet-

ing the ladies in the evening, who, on this occasion, mustered as many as sixty or seventy. Dancing, as a matter of course, was introduced, being kept up with great spirit, in all its forms of waltzing, quadrilling, gallopading, &c., till two in the morning. As Captain Roodikoff's English had evaporated with his champagne, Russ and Yakut were the grand languages of the ball-room, the latter being as fluently spoken as the former by the white inhabitants, more especially by such of them as have been born and bred in the place, under the auspices of a native nurse. Our worthy host probably enjoyed this last-mentioned advantage, for his father had been Governor of Yakutsk before him.

Next day, as any reasonable reader might expect, I dined at home, discussing with the Governor, who paid me a friendly visit in the afternoon, my last bottle of port. Descending from the praises of the wine to those of the indigenous kumyss, my guest sent for a bottle of the beverage which was used as beer in his family. It appeared to me closely to resemble sour buttermilk, without being at all greasy. It is prepared in a very simple way, the mare's milk, which is rather thinner and sweeter than that of the cow, being merely allowed to stand for some days in a leathern churn, till it becomes sour. It is then bottled for use. The kumyss that is made in this manner by the Yakuti is rather nutritious than exhilarating; but from the same material the Burats and the Kirghiz, living towards the south, extract an intoxicating spirit, in which they indulge to excess.

At the house of Mr. Shagin, we were very hospitably entertained. At his table, on one occasion, we met a

party of twelve substantial burgesses, who appeared, however, to have mixed but little in the world. The dinner was choice and the wine plentiful. In fact, we had come in time for the champagne and other imported dainties, for the annual fair had just been concluded; and as nothing that was really good could possibly last in Yakutsk, a month earlier, or even a month later, might have made all the difference against us. In fact, the people are so liberal and hospitable, that, with respect to exotic luxuries, every family's year begins with a feast and ends with a fast. Their kindness to strangers is altogether extraordinary, and the more so on account of the extravagant price of all extraneous productions. The indigenous articles, however, are cheap enough, fish and wild fowl costing almost nothing, and beef only about a farthing a pound.

In Mr. Shagin's house, I saw some works of the Yakuti, in iron and silver, very skilfully finished. The silver had been obtained from a mountain to the north of Yakutsk, the ore containing seventy per cent. of lead and four of the more precious metal. The iron, as I understood, was found between the Indigirka and the Alasei; and I was assured that the tools made of it, whether from the excellence of the material or from the ingenuity of the workman, rarely broke, even in the severest cold — a degree of perfection never yet exhibited on Hudson's Bay by axes of the best temper. These Yakuti are expert in many other arts besides the working of metals. In preparing their food, for instance, against the winter, they far surpass the Indians of North America, rendering, in particular, their dried meat and dried fish more juicy and tender by first dipping them

in brine; though, after all, there is no travelling fare in Siberia to be compared with pemmican, whether for its small bulk or for its nutritious qualities.

In one highly important particular, the Yakuti may safely challenge all the rest of the world. They are the best eaters on the face of the earth. Having heard a great deal more on this subject than I could bring myself to believe, I resolved to test the thing by the evidence of my own senses. Having procured a couple of fellows, who had a tolerable reputation in this way, from a village about twenty versts distant, I had a dinner prepared for them of two poods of beef boiled, and one pood of butter melted, being thirty-six pounds avoirdupois of the former, and eighteen of the latter, for each of the two. Of the solids, the performers had their respective shares placed before them, while the liquor was in common, with a ladle for drinking it.

Of the operatives, the one was old and the other young. The former, as if he had been training himself into nothing but stomach from head to heel, had his skin hungrily hanging in loose folds over his gaunt bones; while the latter, who showed no external symptoms of extraordinary capacity, must have relied chiefly on the vigour of youth and a willingness of disposition. At starting, the young fellow shot ahead, as if he meant to distance his friend, while the old man, waggishly making his wrinkles flap again upon him, said, "His teeth are sharp; but," continued he, crossing himself, "with the help of my saint, I shall be up with him yet."

After a good dose of the beef, they greased their throats for the second heat of the race by swallowing

each about a pint or so of their heavy wet. At the end of an hour, they had got through half of their welcome toil, my senior guest having, by this time, shaken out nearly his last reef. Their eyes were starting from their heads, and their stomachs projecting into a brace of kettledrums. What were the gentlemen to do with the remaining half of their allowance? One moiety of the question might have been easily answered; for the butter, apparently in its purity, was making an outlet of every pore; but, as the solids could not escape so glibly from the premises, the problem of stowing away eighteen pounds of beef already full to overflowing puzzled all my knowledge, such as it was, of practical mathematics.

Feeling that, whatever might be the case with my guests, I had myself had quite enough of the feast, I left our Cossack and Mr. McIntyre to see that there should be no foul play in getting rid of the meat and drink; and, on returning about two hours afterwards, I was assured by my deputies and others that all was right, while the gluttons themselves tacitly confirmed the testimony by wallowing prostrate on the earth, relieving me, at the same time, from all sense of wrong in the matter by thanking me for my liberality and kissing the ground reverentially for my sake. After such surfeits, the victors remain, for three or four days, in a state of stupor, neither eating nor drinking; and, meanwhile, they are rolled about, somewhat after the manner of the *lumee-lumee* of the Sandwich Islands, with a view to the promoting of digestion — an operation which the slipperiness of their surface renders peculiarly difficult. Two of these gormandizers, one for the bride and ano-

ther for the bridegroom, form part of the entertainments at every native wedding.

Like other small towns, Yakutsk, as a matter of course, is divided into factions; Governor Roodikoff and Mr. Shagin being the respective heads of the Montagues and the Capulets of the place. So far as they are individually concerned, their fathers, as the representatives respectively of the Imperial Government and the Russian American Company, waged fierce war while they lived, leaving, at their deaths, their offices and their quarrels to their sons, who again, if one may judge from appearances, consider the latter portion of their patrimony as fully more valuable than the former. Their duties may be a toil, but their jealousies are evidently a pleasure. This state of things, productive as it is of dissension and litigation, is perhaps wisely ordained, to enable the leaders and their respective parties to kill the nine long, dull, dreary months of winter. The amusement, such as it is, has at least the merit of being general, for not a man of respectability is allowed to remain neutral between the two belligerent bodies. Either a Capulet or a Montague everybody, that aims at being anybody, must become, at least under the penalty of being held as nobody by "both your houses."

I had various opportunities of observing the effects of this universal animosity. To give an instance: a public officer, learning that I had bought some sables from Mr. Shagin, at once pronounced them to be shamefully dear; and then, turning the conversation to the exhibition of my gluttons, he declared, after many mysterious nods and winks, that the thing was a failure,

as might have been expected from men engaged by Mr. Shagin, adding, that he could have got two fellows to hold double the quantity of butter and beef, with my two eaters, bones and all, into the bargain.

In the hospital of the town, there was room for forty patients; and another on a larger scale was building at the time of our visit. There were five medical men in the district, residing generally in the capital, but making occasional circuits in the country. The head of the department was a fat, unwieldy, apoplectic man of about forty, who, when he dined with me at the Governor's, was either absorbed in profound meditation from beginning to end, or needed all his time and attention to meet the internal demand, never opening his mouth excepting for the discharge of the one special duty that was before him. This huge doctor would require to go his rounds through the district with an assortment of the mechanical powers. In his last journey, he was hoisted up a steep hill by means of ropes and pulleys, the horses having refused to move him on any terms; and, in descending on the other side, where the inclined plane might have been reduced to practice, he was led down the precipice with his eyes bandaged, lest he should turn giddy, and so fall soft to the bottom.

All the churches are built of wood, with foundations of stone, but are very substantial, and have a respectable appearance. The walls are constructed of round logs, the lower side of each being scooped out so as to receive the upper side of the one below it; they are then well caulked, outside with hemp or rushes, and inside with moss; and lastly, they are wainscoted, puttied, and painted: when heated by Russian stoves, these edifices

are to a stranger oppressively warm, even in the most intense cold of this hyperborean climate. Such wooden buildings as I have described are remarkably durable; more so perhaps than the bricks, which are gradually coming into fashion, are likely to be. The fort now in ruins, the earliest monument of the Cossacks, was difficult to pull down after it had stood a hundred and fifty years; and Mr. Shagin's dwelling, though a century old, is yet in excellent repair. Speaking of the churches, I must not omit to mention the liberality of Mr. Shiloff, the same whom we met on his way to Ochotsk. This liberal merchant has erected a very neat place of worship at his own private cost, being rewarded by the government with a medal for his generosity. In connexion with his little church, he had also built a school, which was subsequently destroyed by fire; and, on receiving a hint from a high quarter that he should remedy the mischief, he very properly declined the honour, unless on the condition of receiving another medal. Of schools there appears to be a great deficiency, there being only three in the town, and three in the country.

Among other curiosities which I picked up through the kindness of the good folks of Yakutsk, the principal councillor, Mr. Kaydanoff, gave me a pair of round pebbles, brought all the way from China. These stones are, at all convenient times, carried by the Chinese in their left hands from infancy, and kept constantly chafing, one against another, into perfect smoothness; and, when thus prepared, they possess a sort of sacred character, the gift of one of them being a pledge of lasting love and friendship. The rough diamonds them-

selves, I suppose, must be scarce and dear, for the poorer celestials are said to be obliged to content themselves with walnuts instead of pebbles, succeeding, however, in polishing and rounding these less tractable articles to a nicety.

I had also an offer, as a matter of trade, of a few minerals that had been gathered near the Viliui, one of the westerly feeders of the Lena to the north of Yakutsk. A man called on me with about a dozen crystals, cornelians, and petrifications; but, having no interpreter at hand, I desired him to return in the evening. Return he did accordingly, accompanied by a friend; for the accident of my being obliged to ask him to come back had evidently raised the value of his museum in his own estimation. After we had all looked very wise, I demanded his price; and the two worthies, doubtless regarding an Englishman as fair game, had the conscience to name the precise sum of fifteen hundred roubles, probably a compromise, as settled by the pair of cronies, between the first thousand and the second. My reply was such as to need not the aid of an interpreter; and, in one instant, the extortioners and their stones quitted the premises. In the vicinity, by the by, of the Viliui, there are said to be mines of coal—an article which, as wood is hardly to be got so far to the northward, cannot fail to be useful when steam is introduced on the Lena.

On the third day after our own arrival, Jacob presented himself with our baggage. Though the old man was one day behind his stipulated time, yet, as he had done his utmost, I paid him his money in full, thereby sending him off in the very best of humours. I was now

all eagerness for a start, being too impatient even to wait for the next mail from Oehotsk, which was almost immediately expected with my English letters; and I was the more anxious to proceed, inasmuch as the dryness of the season, which had been so favourable to our journey on horseback, was likely henceforward to retard us, for the lowness of the water might keep us so far from the bank, as to embarrass the operation of towing. I therefore resisted all temptations to prolong my stay; while Mesdames Roodikoff and Shagin, as the next best thing to detaining us among them, prepared for our voyage the most liberal supplies of bread, cakes, and tarts, all the more acceptable to us, as well as creditable to the fair donors, on account of the scarcity of flour.

As the navigation of the *Lena* for some distance above the town was said to be very circuitous, I despatched the boat with our baggage on the 16th of the month to proceed as far as Bestach, about a hundred and fifty versts distant by water, where I could overtake her by a ride of a few hours after stealing two days more for the hospitalities of Yakutsk.

Accordingly, on the morning of the 18th, I paid my farewell visit to Governor Roodikoff, when we pledged each other, without much regard to the earliness of the hour, in more than one bumper of champagne; and at length, with much regret, I shook hands with my excellent friend and his amiable family. By the by, Madame Roodikoff and her two pretty daughters seemed scarcely to understand my English style of taking leave, the Russian mode of salutation being for the gentlemen to kiss the lady's hand, and for the lady, in her turn, to kiss the gentleman's cheek.

After an early dinner at Mr. Shagin's, we started at two in the afternoon for Bestach, accompanied by the head of the police. Our whole party consisted of a britzska with five horses, and two telegas with three each. Our road ran through what must have been the ancient bed of the Lena, a valley of twelve or fourteen miles in width, embanked on either side, as already mentioned, by a ridge of several hundred feet in height. The sandy soil produced nothing but short tufty grass, excepting that, in swamps and near creeks, the vegetation was somewhat more luxuriant. We passed through a number of native settlements, consisting at present not merely of the *yourti* for winter, but also of the *urossi* for summer, the former covered with mud, and the latter formed of birch-bark. We changed horses three times, and reached Bestach at ten in the evening, having come over the ground at the rate of ten or twelve miles an hour, to the great hazard of our vehicles and our own necks. On our last stage, in fact, my own postboy was thrown, while the five horses and the britzska passed over him. I of course expected to see him picked up a corpse; but, to our great surprise, he escaped without even a bruise.

From Bestach, our good friend, the head of the police, returned to Yakutsk, having first, however, sent forward his deputy to make arrangements for us at every station, and also left a Cossack sergeant in the boat to keep all and sundry with whom we might have any intercourse on the alert. The stages are of various lengths, generally ranging between twenty and forty versts. At each station there is a postmaster, who, by virtue of his office, wears uniform; and the peasants are bound to provide

horses and drivers for the towing of boats at a regulated price, about a halfpenny a verst for each mounted man, while, in consideration of this duty, they are exempted from all other public services.

Within an hour after reaching Bestach we got under way, with a tolerably comfortable boat for ourselves, and a smaller one in tow for our Cossack and servants. These boats for passengers, which draw from a foot and a half to two feet of water, are divided into three parts. Near the bow is a floor of earth, or brick, or stone, on which a fire is made for cooking ; at the stern are laid a few planks on the gunwales for the helmsman ; and the centre is formed, by means of a covering of canvass and boards, into a sort of cabin, or crib, for the passengers. These craft, as I have already mentioned, are towed by horses, with one driver to each animal ; but, when the men are prevented from attending by sickness, or by any pressing business, of which the postmaster is to judge the sufficiency, they are allowed to substitute boys or women, or any body, making up in number what is wanting in strength. At the very first we had the benefit of this rule—a rule reasonable enough in itself ; for to our four animals we had six useless creatures of drivers, all of them either too young for hard work, or too old for active service.

Our first night on the Lena was rendered as uncomfortable as possible by various causes. Our little prison, besides being hot and close, was infested by swarms of mosquitoes ; and our conductors being frequently obliged, when the shoals ran too far out for towing, to drag our boat over flats up to their waists in water,

kept up a clamour that would have prevented us from sleeping under far more favourable circumstances.

My sleepless hours were made still more miserable by gloomy forebodings of the length of our voyage; and I was quite firm in my belief that, at our present rate of progress, we could not possibly reach Irkutsk within any reasonable time.

The approach of daylight did not much mend the matter. Two thousand five hundred versts on the broad, shallow, sluggish Lena, with its cliffs of clay or sandstone, were a dismal subject for calculation. We were but little more at liberty than when we were in bed. We could not move from our places without incommoding each other; we could not walk along the bank, for the horses, when towing, went too fast to be followed; and the people, when tracking, were struggling in the stream at a great distance from the shore; and even on stopping at the stations to change our cattle, we were not sure of setting foot on land, as the boat sometimes stopped a full verst from the houses. We had no English books at hand; and, as we were all getting tired of each other, we had very little conversation. Even local topics of discussion were nearly out of the question; for my Russian fellow-traveller, through whom alone we could obtain any information, was certainly the most taciturn of the three, having, in fact, become so before he had this lazy river and our floating cage as an excuse.

Our grand hope was, that the waters would rise. In the evening we were heartily glad of a thunderstorm and heavy fall of rain; and the good people were to-

lerably confident that, after to-morrow, which was St. Elias's day, the river would swell out as usual.

In the course of the day, I lost the only sight that was worth seeing, in trying to beguile the tedious hours by dozing: I allude to the perpendicular rocks of great height on the right bank of the river, very appropriately called *stolby*, or the pillars.

Our first day's work, reckoning from Bestach, was as follows:—

Toyou-Arinsk	.	.	.	28 versts.
Tish-Arinsk	.	.	.	42 „
Bushameskaya	.	.	.	23 „
				<hr/>
				93 versts.

On the 20th, St. Elias was as good as his word. A few refreshing showers cooled the atmosphere; and, as every little would help, we trusted that they might have contributed to raise the Lena. To-day, our Cossack, after making a good deal of noise, got some abler drivers for us. But this forced labour, in spite of the remuneration, evidently fell very heavily on the poor people, more particularly at this season of the year, when they required fully all their time for getting in their hay, the only provender against winter for the herds on which their own subsistence chiefly depended. We were still far below Olekminsk, in the neighbourhood of which were to be seen the first attempts at agriculture. Our stations contained merely eight or ten peasants each, who scraped together a scanty livelihood by the towing of boats and the pasturing of cattle. Their ancestors, principally exiles and old soldiers, must have been partly planted by government

without their own consent, and partly induced to make so unfavourable a selection by an exemption from taxes, or perhaps by the temptations of the fur-trade.

Whatever might be the difficulties of the case, our friend ahead took care that we should experience no delay at the stations; and to-day he stopped till we overtook him, to ascertain whether we found every thing as it should be. He was a Pole by birth, very civil, and chatty.

The river varied in breadth from five or six versts to three or four, being divided by islands and sand-banks into different channels. The shores consisted, for the most part, of high and broken rocks. Our stations were—

Sinkaya	28 versts.
Onmooranskaya	32 „
Foorinskaya	25 „
	<hr/>
	85 versts.

In the course of the night we sprang a leak, which, after causing a good deal of confusion and alarm, was fortunately stopped without having done any material damage.

During next day we passed a rocky island, ten or twelve versts long, of exactly the same character as the mainland; and it had all the appearance of having at one time formed the bank of the river, till the stream, by ploughing for itself a passage behind, had cast it, as it were, adrift from the shore. At one of the stations I saw some bread, which had been made of rye and the inner bark of the larch, ground up together. On this unsavoury substance, with sour milk, the poor people

in a great measure lived; and they were considered to fare sumptuously indeed, if they could add a little of something that looked very much like tallow, being a mixture of curd and butter melted together into a mould. As to the article of dress, they were clad almost exclusively in the skins of their defunct nags; and their very feet were enveloped in stockings of horsehair, which, I apprehend, would make a very satisfactory kind of penance for the tender feet of some other regions.

As we contrived to get six horses instead of four, with a corresponding increase in the number of drivers, we made a longer march to-day than usual. Our stations were—

Tsitskaya	34	verts.
Malikanskaya	35	„
Saniyachtachskaya	42	„
					<hr/>	
					111	verts.

On the fourth day of our voyage from Bestach, we were met, at the station of Marchinskaya, by the police-master of Olekminsk, who had come, by direction of the kind and considerate Captain Roodikoff, to succeed his brother in trade, from Yakutsk, in making arrangements for us beforehand at the different stations. As our Pole was now to return, I sent by him, as a trifling acknowledgment of the gallant Governor's untiring politeness, the remainder of our stock, about eight gallons of port wine, feeling assured that he would appreciate the gift as an expression of my sense of obligation, independently of its being something in Yakutsk, where a genuine glass of the kind was, perhaps, never seen before.

Our new friend was a brother of Mr. Atlasoff, of Ochotsk. He met us in full uniform, with cocked hat, sword, and white gloves. He had been thirty-eight years in the service, and, during the whole of that time, had never been out of the district of Yakutsk. He appeared to be as remarkable in the way of reindeer as his brother was with snow-shoes, having driven the same animals two hundred versts a day, for three or four days consecutively; and having ridden one of the creatures for a similar period, at nearly two-thirds of the rate just mentioned. If the reindeer falls to the ground through exhaustion, the rider, or driver, seizes the animal's tongue, holding it out of its mouth for ten or fifteen minutes: if this be done, it generally recovers; if not, it is pretty sure to die. In riding, the grand difficulty is to keep the saddle firm, which, from the uncongenial shape of the brute's back, has always a tendency to slip about in every possible direction, sometimes to the right and sometimes to the left, sometimes backwards and sometimes forwards. In summer, the reindeer's principal food is moss; but in winter, it thrives well on frozen fish.

At the station, where we met Mr. Atlasoff, we got the *titemay*, a sort of salmon-trout, and the *stirlitz*, a kind of sturgeon, both very good in their way. The *yelma*, or white salmon, reckoned the best fish in the river, I did not consider to be by any means of fine flavour.

The banks, which had hitherto been generally steep and rocky, were now considerably changed in appearance, sloping, in most places, down to the water's edge. The stream itself had improved, too, for St. Elias had

done his duty so well as to allow us to approach the shore near enough for being conveniently towed. We met several canoes of birch-bark, similar in form to those that we had seen on the Aldan and the Pend'-d'Oreille, with the long double paddle of the Esquimaux. In the forenoon, a heavy squall drove our boat on the beach, setting our little tender adrift; the wind was very fresh for a short time, raising a rough sea, and uprooting the trees around us. For a wonder, we got ashore five minutes to-day and had a bath—quite an event to us, after having been huddled together, nearly four days and nights, without space to stretch our legs, or even to enjoy the full swing of a comfortable yawn. Our stations were—

Marchinskaya	.	.	.	41 versts.
Chatik Toomool	.	.	.	22 „
				<hr/>
				63 versts.

In the early part of the night a quantity of rain fell, so that the various streams, whose mouths we passed next day, were considerably swollen. St. Elias, in fact, was sustaining his reputation admirably, improving, at the same time, our navigation, in spite of our heretical scepticism.

As a piece of great luck, we got a walk on shore of three or four versts this forenoon; and much we needed some exercise, eating and sleeping, varied only by sleeping and eating, having rendered us stiff and puffy, quite unfit, in short, for the work that we should have to perform after quitting the lazy Lena. Though the scenery was becoming softer, with an occasional symptom of agriculture, yet we could hardly bring ourselves to

take an interest in anything but our rate of progress. The only feature in the day's work that roused our attention, was an assemblage of bluff rocks, standing out from the general line of the shore in the form of pillars, chimneys, turrets, &c. We had been five days from Bestach without having accomplished the fifth part of our voyage. Our stations were—

				111	versts.

The station of Solianskaya, which we passed in the night, was said to derive its name from some saline springs in its neighbourhood. At four in the morning, being our sixth day from Bestach, we reached Olekminsk, where we were received with the utmost kindness and attention by Mr. Atlasoff, who had stopped here in order to dispense to us the hospitalities of his own home. Though the landing-place was not above five hundred yards from his house, yet a drosky, drawn by a spirited pair of black horses, was waiting to carry us, with some ten or twelve Cossacks to dance attendance on all sides. The residence was comfortable and commodious, the floor actually looking as clean and white as if it had been holy-stoned for half a century—as it might have been, for the building, though only of wood, was yet nearly a hundred years old. We were introduced to Madame Atlasoff and her son, who did the honours of our reception with a good grace. These Atlasoffs, as I have already mentioned with respect to the gentleman of the same name at Ochotsk, were justly proud of being

descended from the original conqueror of Kamschatka. Perhaps, as a whole, the Siberian conquests of the Cos-sacks were more marvellous than any other series of similar exploits; for, from the days of Yermac, to be hereafter noticed, to those of our host's ancestor, they subjugated one populous tribe after another, in bands so small—often in twenties, and twelves, and tens—as to throw into the shade the hardihood of the first invaders of Mexico and Peru.

According to custom, we began the day, even at this early hour, by taking a glass of tea, with cream and rusks; and then, after visiting the church and whatever else was to be seen in the town, we returned, about half-past six, to a substantial breakfast, at which our host insisted on my occupying the chair. Before proceeding to real business, we had a relish, which to us would have been a splendid meal, in the shape of caviar, radishes, salted fish, bread, gin, and rum, with a glass of nalifky, a native spirit extracted from rye and flavoured with berries and sweetmeats. Having appetized ourselves in this pleasant way, we did the amplest justice to a genuine feast of fish-patties, beefsteaks, sweetbread, soup, and bouillie, stewed prunes, cream, &c.

The neatness of the whole premises bore testimony to the taste and ingenuity of this agreeable family. In the windows were tubs of flowers, which were then all in blossom; and the Siberian rose in particular was very pretty, with its semi-transparent stem and leaves. In the garden were cucumbers, peas, and various other vegetables.

Like all the other settlements that we had seen, Olekminsk stood on the west, or left bank of the river,

which thus appeared to form a kind of definite boundary between civilization and barbarism. It derives its name from the Olekma, which falls into the Lena immediately opposite to the town. In spring, the lower parts of Olekminsk are subject to inundations; but the climate, notwithstanding the periodical visits of the intermittent fever, is considered healthy.

The town contained about fifty houses, with a population of about four hundred souls; and the whole district, according to Mr. Atlasoff's statement, numbered four thousand seven hundred and eighty-three males, being three thousand six hundred and thirty Yakuti, five hundred and twenty Tungusi, and six hundred and thirty-three Russians, or about ten thousand of both sexes in all. The climate is sufficiently good for potatoes, rye, oats, and even wheat, at least of the Himalayan variety. Still, however, the seasons are so uncertain, more particularly with respect to the early frosts, that the rye varies from a maximum of forty returns to a minimum of five, while wheaten flour ranges between twelve and thirty-six roubles a pood.

Mr. Atlasoff and three merchants were the principal inhabitants. These good people, contrary to the standing rule in small communities, contrived to live together on terms of perfect harmony; and, as the village boasted a resident fiddler, their social meetings generally ended in a dance. The leading trader is an experimental farmer, dividing his attention between agriculture and commerce; and, in his well-regulated establishment, I saw a small flock of sheep, an old billy-goat, several cows and calves, a number of tame geese, and, lastly, two pairs of cranes from the Vittim, stepping about in

a very ladylike manner. On the very day before our arrival, one of the other two merchants had gone mad. The first symptom of his derangement had been his demanding from Mr. Atlasoff a passport to St. Petersburg, to enable him to organize a mercantile association, "of which," said the worthy magistrate, crossing himself devoutly, "the Almighty was to be president and the Emperor vice-president."

At Olekminsk there is an annual fair, which is attended by the itinerant dealers as they descend the Lena, on their way to Yakutsk. The principal articles of native production are the far-famed sables of the Olekma, universally admitted to be the finest in the world. They are found on the river just named, which rises in the Yablonnoi chain, forming the north-eastern portion of the boundary between Russia and China; and the annual returns usually amount to five or six hundred skins. These sables are extravagantly high, even at Olekminsk, having this year fetched fifteen hundred roubles for forty as they rose from the pile, and having last year brought a thousand roubles more; so that the mere difference between two successive seasons has been upwards of a pound sterling on the price of every single skin. In addition to the sables, many squirrels of a very valuable description, and also a few bears, wolves, and foxes, are exposed at the annual fair.

As the trappers trace the Olekma to its very sources, distant, by the crow's flight, about four hundred miles, hunting all the way wherever there is profitable ground, they are about ten months absent from the Lena, starting in August and returning in June. It is, in fact, towards the head of the river that the best skins are

found, for the animals appear to get sleeker, as well as more numerous, in proportion to the remoteness of the haunts of men. Of this principle, the opposite shores of the Lena, separated from each other at most by a breadth of five or six versts, furnish a remarkable exemplification, the furs on the west bank being comparatively coarse and scarce, and those on the east bank fine and abundant.

Having obtained a good supply of vegetables and fresh provisions, we left Olekminsk, Mr. Atlasoff preceding us as before; and about five in the afternoon we reached the station of Berdinskaya, whence we were tracked twenty versts by men. Whilst proceeding in this way, we passed an island peopled by Yakuti; and our steersman, seeing seven or eight fellows sleeping on the bank, without any thought of a towing-line, pointed out the providential reinforcement to his wearied companions. The Yakuti awoke just in time to make a good race of it; but, after a sharp hunt among the willows, they were all forced to lend a hand at the rope. Such a chase is sometimes carried into effect even in joke, for the timid Yakuti submit to this species of impressment with characteristic pusillanimity.

The settlements were more numerous to-day; and the extent of cultivated land regularly increased. Our stations were—

During the night, the wind was fresh, and we had an alarm of shipwreck, though happily we escaped that

calamity. Next day, being our seventh from Bestach, our Cossack gave us a specimen of his summary discipline. As the progress of the boat was not equal to the irascibility of his temper, the man of office went ashore in a small canoe to quicken the pace; and, having made six of the miserable drivers, Russians and Yakuti, dismount at the word of command, he belaboured them in turn with a thick stick, apparently distributing his favours with the utmost impartiality. The unresisting wretches seemed to feel the wanton outrage far less than ourselves; they took the whole thing, in fact, as a matter of course. They were, perhaps, conscious of having in some degree deserved what they got; and I certainly found, as Captain Cochrane had found before me, that, under the system of corporal chastisement, the people had become so degraded as hardly to appreciate, at least within the limits of a traveller's patience, the force of any other motive.

The country still continued to improve as we ascended. The population was less scanty; the presence of several flocks of sheep bore evidence of the amelioration of the climate; and the scenery was less monotonous, for the banks showed many well-wooded hills, while numberless streams, large and small, flowed into the Lena through the intermediate valleys. Our stations were—

				<hr/>
				103 versts.

Next day, we walked some ten versts along shore, killing time pleasantly enough by gathering blue berries

and excellent currants. The settlers seemed to be comfortably lodged and well clad, while for their maintenance they had abundance of cattle, sheep, poultry, grain, potatoes, and vegetables. In spite of the want of schools, all the Russians, of every age, and many of the Yakuti, could read and write, education being handed down, very much to the credit of the people, as an heirloom from father to son. This we understood to be more or less the case all over Eastern Siberia.

In the evening, we passed some very remarkable rocks, partly on the mainland and partly on islands, known as the "hurrah" rocks, from their being saluted with loud shouts by the boatmen descending the river in loaded craft. This custom most probably originated in the resemblance borne by the rocks in question to human habitations. They were said to have the appearance of chimneys, battlements, pillars, gables, and the like; but most of this we were obliged to take on trust; for, as we passed the spot towards the close of twilight, we saw but little of the curiosities.

Speaking of the downward craft, we had met a heavily laden tub to-day, carrying to Yakutsk supplies of grain, stores, and provisions. It was a large bateau made of round logs, which were covered with boards, while rough planks were nailed on the tops of the sides by way of gunwales. It was, in truth, nothing more than a raft, drifting down before the current, with some six or seven people on board to keep it out of mischief. Such crazy and unmanageable barges are so slow in their movements, that, after wasting the whole season of open water, they are sometimes overtaken by winter before they reach the remoter stations to the north of Yakutsk, causing a

great deal of expense and loss to the government, and not a little of inconvenience and misery to the settlers. Even without the aid of steam, the evil might be remedied by the introduction of a faster class of vessels. One should, however, remember, that, as the upward freight is much less bulky than the downward, the rafts in question are employed only for the one single voyage, being broken up, at their place of destination, for fencing, &c. To get the vessels along, such as they are, every artifice is adopted. When the winds are favourable, sails are hoisted; and when there is no propelling force but that of the water, trees, attached to the bows, are sunk with their branches foremost, so as to take a deeper hold of the current.

This was our last day of Mr. Atlasoff; for Kamen-skaya—taking its name, by the by, from the rocks just mentioned, which were a little below it—was the most southerly place in the Yakutsk district; but, before leaving us, he sent forward a light boat to intimate to the different postmasters on the route that persons of distinction, under the immediate care and protection of government, would require to find horses and drivers in readiness at every station. We parted from this very worthy man, with such a sense of his services as made us regret that he did not hold some appointment more appropriate to his deserts; and we liked him all the better for the honest pride with which he traced his descent in a direct line from the Atlasoff of Kamschatka.

From Olekminsk, where it was five versts wide, the Lena had gradually diminished in breadth, till now it resembled in size the Saskatchewan at Carlton, with only about half a mile from shore to shore, while its

surface was still farther contracted by its being studded with islands of pine, birch, and willow. Our stations were—

Next day, being our ninth from Bestach, carried us through a country so sterile and poor, that the inhabitants, to all appearance, contrived to support themselves only by dint of the most miserable expedients. The cone of the stone pine, when roasted, formed a part of their food, being far inferior in flavour to the same kind of thing that we had received from the worthy monks of Santa Barbara. Among the utensils of the peasants, I noticed a quern, such as was once commonly used in the Highlands of Scotland for grinding oats and barley; and I also observed shoes of birch-bark, very indifferent wear, I should imagine, for rough or wet roads. These poor people might be regarded as victims for the public good; for they might mend their position even by going down the river, if they were not obliged to remain, in order to preserve the continuity of the line of conveyance.

Yerbinsky, our first station of this morning, lay within the limits of the Irkutsk government. At this place, under the orthography of Djerbinsky, or Jerbat, Captain Cochrane found a remarkable cave, of which, however, the unphilosophical denizens appeared to be entirely ignorant. Next day, being our eleventh from Bestach, we passed, in the afternoon, the station of Kristoffskaya, said to be half way between Yakutsk and Irkutsk. In the evening, we went ashore at Pooloodoffskaya, where there were about a hundred inhabitants, with many fields of potatoes, barley, rye, and oats. While we were exploring one of their houses, prying perhaps too curiously into everything, we were furiously attacked by a woman, who took us for petty robbers; but, to make amends for the lady's churlishness, the elder of the village, a fine, good-humoured old man, offered us cream, berries, and nuts, with the evident intention of removing any bad impression from our minds. The amusing fierceness of the virago in question, as the solitary exception to the general rule, only tended to make us appreciate more highly the hospitality and kindness of all classes of the population of Eastern Siberia.

To-day, we overtook six fellows, four Russians and two Yakuti, who were going to Irkutsk on a charge of murder, and who were beguiling the time, as they went, with desperate quarrels and fights among themselves. As already mentioned with respect to Heroux, whom I saw moving about at large on the North-west Coast, these wretches were not in irons. Throughout Russia,

in fact, there would appear to be a singular disposition to run into opposite extremes on the subject of punishment. Though we had seen the whip and the cudgel applied for any offence or no offence, yet we were told that death, as such, could hardly be inflicted even on the most atrocious criminals. Our stations of to-day were—

Next day, being the 30th of the month, our first station was Vittimsk, a large village, with a population of two or three hundred souls. It takes its name from the Vittim, which empties itself by three mouths into the Lena, immediately opposite to the station. This stream, which, at the point of confluence, is nearly equal to the main river, rises in the Vittim Steppe, not far from the Chinese frontier. Its sables, which have a high character, are inferior only to those of the Olekma, the difference probably arising from the circumstance, that the sources of the latter are more immediately in contact with the inaccessible fastnesses of the Yablonnoi Chain than those of the former. The Vittim is remarkable also for a tale mine, which is said to produce the largest and clearest sheets of the substance in the world, some of them being quite pure to the extent of two feet and a half square.

Vittimsk may be considered as the limit between the Yakuti and the Tungusi, as practically fixed by the Cossacks, when they came to mediate, with the strong hand, between the native tribes. Previously to the

European invasion of Siberia, the tide of population had almost uninterruptedly flowed from the south. The Yakuti, as universal tradition testified, had descended from the Lake Baikal and the River Amoor, driving before them into the remotest north and east the miserable remnants of the Omoki, the Yukahiri, and the Tehuwanzi; while the Tungusi, if their superior courage and energy had had full play for another century, would most probably have sent the victors after the vanquished to the inhospitable borders of the land of the Tehuktchi. In fact, this tide of population could have hardly ever ebbed to the southward; for the tribes of the extreme north, if they had attempted to return to a richer soil and a warmer climate, would have had to encounter the hordes of the central steppes, far more populous, and not a whit less hardy, than themselves.

This set of the current of migration would explain some of the peculiarities of the aborigines of Northern Asia, as distinguished from those of the new world. It would, in a great measure, account for the fact, that most of the dialects of Tartary and Siberia bore the plainest traces of affinity, even when the different tribes were not connected together by the paramount influence of the neighbouring powers; while the languages of the new world, excepting, of course, the branches of the same stem, were fundamentally and irreconcilably distinct. It would also, in a great measure, account for the fact, that Siberia was never so wholly lost to civilization as America had been. Its most secluded corner was linked with the rest of the world, both by war and by commerce, those grand bonds of union by which Providence constantly counteracted the isolating tendency of the confusion of tongues; and it doubtless was

through the want of such bonds—a want occasioned partly by the immeasurable distance, and partly by the impassable ocean—that the natives of the new continent sank into a barbarism unknown and unsuspected before the days of Columbus.

Even in the old world, entire seclusion of one race from all others would appear to have been unfavourable to national improvement. In diametrically opposite climates, the Laplander and the Hottentot resembled each other, in being the lowest specimens of humanity in their respective quarters of the globe, while the Kamschatdales, in spite of the vast superiority of their soil and climate, were inferior, in almost every respect, to the Tchuktchi, who enjoyed no other advantage than that of being more immediately in contact with other tribes. Spain, too, on the one hand, and China and Japan on the other, would tend to establish the principle in question; for, though they were, in point of fact, highly civilized, yet they alone, of all the communities on earth that were so, continued at best to be stationary in their civilization. If, in some of these instances, the state of things is at present different, the change only tends to confirm the rule; and, to offer one example, the Chinese, by being brought, for two or three campaigns, into involuntary intercourse with the British, have confessedly learned more, not merely of the science of war, but also of the arts of peace, than any people before them ever learned in so short a time.

To resume my narrative. While we were passing some steep rocks to-day, the little boat in tow, in which were our servants and the Cossack, was upset; and all the baggage got thoroughly soaked, though, fortunately, nothing of value was lost. If this accident had hap-

pened at night, some of the persons in the boat, and perhaps all of them, would have been drowned; for even good swimmers, in the absence of assistance, would have been unable to extricate themselves from the covering of the capsized vessel.

At our last station, we were obliged to wait about three quarters of an hour for horses. Our visit at this season, when the people were collecting their hay, was certainly most inconvenient; nevertheless, any excuse for the detention of travellers would be wholly inadmissible. In the present case, we bullied the elder of the village, a sort of rural mayor; he, in his turn, bullied all others; and, after much uproar, we could get only women and boys as drivers, one of the former having to leave her sucking infant, in order to proceed on this nocturnal duty.

The women on this river were the most active and laborious of their sex that I ever saw; while, in common with the men, they were remarkably civil and obliging. Every person, too, was of a pious turn of mind, at least so far as external observances went. To-day, for instance, on looking into the house of one of the drivers, we were followed by the man himself; and no sooner was the door of the best room opened, than our host fell into a fit of bowing and crossing, in honour of an image that occupied one corner of the apartment. 119 versts.

Next day, being the last of July, we reached Doob-roffskaya at ten in the morning. This was the neatest settlement that I had yet seen. The dwellings were large and commodious, with a bath-house attached to each; and everything bespoke a more than ordinary share of cleanliness and industry. At our preceding stations, there had been generally but one bath-house for several families, into which young and old, of both sexes, used to enter indiscriminately at least once a week. In addition to the clamour of the elder of the village, the cries of the postillions, the scolding of our Cossack, the barking of dogs, and all other sounds incidental to a change of horses, I heard a precisely similar uproar from the opposite bank, as if other travellers had been getting fresh nags at a rival establishment. The whole proved to be the effect of one of the most correct echoes that I had ever heard, whole sentences being repeated distinctly. At our bidding, the echo spoke English to admiration, for the first time, perhaps, in its existence.

We passed some perpendicular rocks, known as the "Cheeks of the Lena," which contracted the stream to about a quarter of a verst in width, with a current of four knots. Here also was an echo, which I tested by firing a pistol several times; and, in each case, at least six successive reports were reverberated in the most extraordinary manner.

In my rambles of to-day, I found currants of various kinds, cranberries, raspberries, service-berries, strawberries, and choke-cherries. As to provisions, we were now well off, having a regular supply of mutton, fish, potatoes, eggs, honey, cream, butter, &c., with excel-

lent tea — black only — three times a day, but neither wine, nor spirits, nor beer. The indolent routine of our life was generally as follows. We rose at ten; we bathed; we breakfasted; if practicable, we walked from three to ten versts; we then returned to bed for an hour or two, in order to cool ourselves; after a second bath, we dined about four, stretching our legs, perhaps, for a few minutes, as a digester, at some station or other; we took supper at nine, going to bed as soon thereafter as might be agreeable. In justice, however, I should add, that we did occasionally read, and write, and talk.

				111 versts.

Last evening, we had noticed that all the bath-houses were lighted for active service—a circumstance which proved that the people were sweating themselves into a state of purification, in order to do honour to some festival or other. This was the invariable custom on Saturday night, or on the eve of any grand holiday.

Accordingly, this turned out to be Our Saviour's name-day. All the inhabitants were decked in their best clothes, enjoying a little respite from labour. Wherever we put ashore, the heads of families hastened down to us, with little presents of eggs, cream, green peas, &c., uniformly refusing payment, and saying that, on such an occasion, it was not right that we should be allowed to pass their dwellings without partaking of

what they had to bestow. Notwithstanding this liberality, we learned that the poor people were really labouring under a considerable scarcity of food, inasmuch as St. Elias, with his high waters, however friendly he had been to us, had, in a great measure, cut off their principal source of subsistence. This state of things was well expressed in the comprehensive phrase, that their nets were too small and their breeches too large.

At Fliinskaya, which we reached about ten in the evening, the inhabitants were keeping up the festivities with great spirit. The whole of them, to the number of eighty or a hundred, had met in two houses, where, besides dancing, they were moistening their clay with plentiful potations of a vile description of beer, which, weak as it was, had made them half muzzy. The music was the screeching of some half-dozen old women; and the floor was occupied by only one man and one woman at a time. First, the lady would endeavour to escape from her lover with an amusing display of coyness and coquetry; and then the gentleman, in his turn, would draw off, while his mistress would strive, by every winning way, to coax the truant back again. At the conclusion of each dance, the fair performer gave me three kisses, conferring the same favour on each of the other strangers, excepting that our Cossack appeared to me to get, or perhaps to take, a double dose. All the people, whether drunk or sober, carried their civility to excess, kissing my hand frequently, and even the ground on which I had been standing, and showering on me their perpetual benediction of "May you never want bread and salt!"

Speaking, by the by, of these festivities, I saw hops to-day on some of the farms.

To myself, as well as to these poor people, this was a day of joy and gladness. Just as we were sitting down to dinner, a Cossack arrived from Yakutsk, bringing me the English letters that I had passed on the road near Ochotsk. Having been sent back by the next mail, they had reached Yakutsk on the fourth day after my departure; and on the same evening they were sent after me by the worthy governor, in charge of an active man, who was, with all speed, to travel on horseback by day, and by night in a light boat. In this manner, the courier had followed us for fifteen hundred versts, accomplishing in ten days what had occupied us fourteen; and I had, therefore, every reason to be satisfied with his zeal and diligence. The attendant expense of two hundred and seventy roubles I by no means grudged, for the intelligence from my family was honey to my soul.

We passed several large settlements, in two of which there were churches, and met a priest in a canoe going to perform duty in one of the places of worship. In this part of Siberia, there would appear to be very few ministers, there being, in fact, a lamentable dearth of religious and moral education; and the sole teachers of the people, in most neighbourhoods, seemed to be the Cossacks and the magistrates. We were now in the country of the Tungusi; and at Tsherskaya we saw a few of the tribe. Both physically and morally, they were superior to the Yakuti, active, well made, and independent in their manners and sentiments.

				101	versts.

Next day, being the 2nd of August, the banks of the river were hilly and well wooded; and at all the spots fit for cultivation, generally distant from each other eight or ten versts, were small settlements of fifteen or twenty families a piece. At every place were collected large heaps of the cones of the stone pine, intended partly for food, and partly for being crushed into an oil, which, being used by the Russians in salads and cookery, brings as much as ninety roubles a pood. Among other manufactures of the peasantry of the neighbourhood, we observed a thick felt of sheep's wool, used for bedding, saddles, &c.; and we were told that the Mongols and other southern tribes made a similar article of camel's hair, of which they sold considerable quantities, chiefly for tents, to the Burats of Lake Baikal.

As we advanced on our voyage, that very disagreeable complaint, the goîtres, became more and more prevalent. Other maladies, also, of the blood, or of the general system, were very common. Noses in particular appeared to have been almost decimated; and certainly, in no part of the world did I ever see nearly so many faces divested of their ornament and protection.

At Alexeyeffskaya, the poor people had not got their horses quite ready—an offence which “his worship,”

the popular designation of a Cossack, resented with much more zeal than ceremony, suiting his style to his subject, and his actions to his words. This wretched system of irresponsible cruelty should undoubtedly be reformed. But, for the reasons already mentioned, a traveller would only waste his time in attempting such a thing in his own case, while even the government, however good and resolute its intentions might be on the subject, could not immediately remedy the evil. The law might prohibit the use of the cudgel, supplying its place, as a matter of necessity, with a better motive in the shape of a higher rate of remuneration; but, in the latter branch of the business, nine out of every ten travellers would find an additional reason for kicking and cuffing the inoffensive creatures, relying on the proverbial consolation of official knaves, that the Emperor was far off, and calculating on the interested sympathy of nearly all those, who might be occupying the long ladder of communication between his majesty and themselves. Even if the victim of a wanton assault could sue for damages, or some other satisfaction in the local courts, he could, in general, obtain justice only by outbidding his oppressor, who would most probably be far abler to buy the venal commodity in question than himself. In fact, the head of an extensive despotism is peculiarly liable to be deceived by his subordinate functionaries; and, as a remarkable instance, the Brother of the Sun and Moon is said to have been the last man in Peking to hear of the capture of Canton. How can Truth, distorted as she proverbially is, in passing from one street to another, fight her way, unadulterated and unsullied, over thousands of miles, where every tenth

individual that she meets has an interest in moulding her to serve his own ends, or those of his friend or his party?

Moreover, there would, in my opinion, be a good deal of difficulty in bringing the ignorant people to believe that nobody had a right to beat them; for the same middlemen, who would prevent the Emperor from hearing their complaints, could still more easily prevent them from knowing the Emperor's benevolence. The simplicity and credulity of the great mass of the population of Siberia, with respect to everything that does not fall within their own daily routine, are quite incredible. When an astronomical party, for instance, was traversing the country, astonishing the natives night after night, with telescopes and sextants, a wag of a fellow set the curiosity of the good folks quite at rest, by telling them, that his majesty had missed one of his stars, and had sent out his wise men to find it. Next morning, by six o'clock, we reached Kirensk, being, in point of size and importance, the second town on the Lena; by reason, however, of a thick fog, we could see nothing more than the looming of a number of houses through the vapour. It was said to contain about fifteen hundred inhabitants, principally Russians, and to be regularly laid out with one school, five churches, and several substantial houses. We were visited by the mayor, who was also head of the police, the com-

missary, and the postmaster, all equipped in their best uniform for the occasion.

At this place, our Cossack would really have had some excuse for inflicting his summary justice, inasmuch as we were detained two hours for want of horses—a delay such as we had never experienced even at the meanest station on the route. Unfortunately, however, the offender in the present case was a peg or two above the jurisdiction of “his worship.” Our Cossack had gone to rouse the postmaster, whose maid-of-all-work, hearing the terrible voice of our disciplinarian, speedily brought a message from her master, that the applicant should first take his *podoroshnoya* to the head of the place. With considerable difficulty the magistrate in question was got out of bed; and at last the postmaster and himself presented themselves to us in their grandest outfit, having evidently made us wait longer than was necessary, that they might show themselves off to the best advantage. The postmaster apologized by saying, that he was a hard sleeper, so much so, that his maid-of-all-work had positive orders to keep stirring him till he rose, and even then not to leave him till he was half dressed; but that the damsel, in her eagerness to satisfy our Cossack, had not sufficiently shaken him that morning. To prove the truth of his statement and the sincerity of his regret, he offered to trounce the girl on the spot; and, though we then and there denied him that pleasure, yet he most probably paid the fair delinquent with interest after our departure. The obvious truth was, that the two gentlemen, having heard that strangers, who were very great men, were coming up the *Lena*, had conspired to manage

matters in such a way as to enable each of themselves to see and be seen.

The Lena, from its seven versts at Yakutsk, was now reduced to three hundred yards in width, while its shallow stream was overgrown at the bottom with grass and reeds, which greatly impeded our progress. Getting tired of the delays experienced by the boat, one of my fellow-travellers and myself resolved to amuse ourselves by walking along the bank. Coming to a track, which struck through the woods apparently as a short cut from one side of a deep point to another, we followed it for seven or eight versts, till we again came out upon the Lena. Seeing nothing of our little squadron, we sauntered up the towing-path for five or six versts farther, expecting every moment to be overtaken; but, towards sunset, being certain that we were ahead of our friends, we retraced our steps, fortunately reaching, when it was now nearly dark, the station of Soberskaya.

At this settlement, which appeared to consist of a single hut, we found twelve or thirteen men and lads, who gave us a hearty reception. In fact, our appearance and condition would have excited the compassion of less hospitable people. To say nothing of hunger, we were suffering from cold, and were almost crippled; for we had started in the heat of the day, without shoes, and with no other clothes, in fact, than our shirts and trousers. The peasants, taking pity on our forlorn state, made a grand fire for us, and offered us a share of their own supper, which consisted of black bread, a little salt, and a dish of cold water, which, that it might look as like soup as possible, was taken with a spoon. Immense piles of the unsavoury cakes rapidly disap-

peared ; and each person, as he finished his meal, bowed to some images that stood against the wall of the best room, of which the door was open. Perceiving that we enjoyed the heat much more than the victuals, the peasants, after explaining that this was a fast-day with them, boiled some potatoes, which, with the salt and a few spoonfuls of the cold water, were very acceptable.

Speaking, by the by, of the water and the salt, and of the ceremony with which they were used, the two articles in question hold a high place throughout Russia, as being the sacred emblems of hospitality. Even in the poorest hovel, they are at the service of the stranger, while the partaker receives a benediction as well as a welcome. A story is told, that, during the French invasion, the inmates of a house, who had hid themselves on the approach of a few soldiers, could not refrain from pronouncing the customary blessing while the marauders were helping themselves to water under their roof. Thus far the anecdote is quite in keeping with national character ; nor is the sequel, in my opinion, altogether improbable. The hospitable and pious ejaculation was the death-warrant of the family, and they were one and all butchered by their ruffianly guests. Soon after midnight, we were much relieved, both in mind and body, by the arrival of my servant and our Cossack, who had walked ahead of the party to meet us, or to search for us, bringing our coats with them. They informed us that the detention of the boats had been caused partly by the shallowness of the stream and partly by the fact that the bend of the river was five or six times as long as the neck of land that we ourselves had crossed. Embarking in a canoe to meet our people,

we got on board again by two in the morning; and, in the course of an hour, we made amends, in the shape of a hearty supper, for the day's misfortunes.

In the course of the rambles just mentioned, I saw a good deal of land under cultivation, with tolerable crops of wheat, barley, oats, rye, potatoes, hops, flax, &c. Here I saw, also, something that I had never seen before. I had often heard of "nettle kale" in Scotland, and perhaps had eaten it; but never, till I visited the banks of the Lena, had I found nettles artificially grown as greens. At Sitka I had partaken of them, dried and preserved; and, to my taste, they were an excellent vegetable. Our stations were—

On rising unusually late next forenoon, I found that we were passing through a highly interesting country. The banks of the river were undulating and well wooded, while every spot that was capable of cultivation was occupied by an agricultural settlement. In the course of the afternoon, we were obliged to remain a short time at Oolkanskaya, in order to stop a leak. The village at this station was divided into two parts by a small stream, from which it was said to derive its name; and, while strolling about, I observed in the brook a number of baskets and weirs for taking fish, such as I had seen on the Columbia and in New Caledonia.

The settlers told me that their crops were better this year than usual, but that sometimes they had been so

unproductive as to render necessary the purchase of grain. They also complained that the wolves and bears, which were numerous, frequently carried off their cattle, pigs, horses, and sheep. From all accounts, these beasts of prey would appear to be much fiercer here than in America.

The more that I saw of the peasants, the better, generally speaking, did I like them. In two or three instances, however, I was induced to suspect that they must have inherited from their ancestors, who had been chiefly convicts, a few prejudices on the important subject of private property. The loss of a bridle and of two or three other small articles proved that pilfering was not altogether unknown on the Lena.

Next day, being the 5th of the month, the water was deeper and the footing for the horses better, so that this was by far the longest march that we made. The banks of the river continued to improve in fertility and populousness.

All the settlements on the Lena usually stand at the outlets of rivers or creeks, or on low points of alluvial formation. Such situations, though advantageous in regard to soil, are yet very undesirable in this respect, that they are liable to be deluged as often as the waters are high. During such inundations, the inhabitants are

frequently obliged to take refuge in the upper stories of some of the loftier houses, while, in almost every season, several dwellings and families are swept away from some neighbourhood or other by the current.

Besides the crops already mentioned, the inhabitants of the Upper Lena raise tobacco sufficient for their own consumption. In short, without being dependent on any market, they produce for themselves an abundance of food, make their own clothing, build their own houses, grind their own corn, either in water-mills of simple construction, or by means of querns, and, though last not least, prepare their own snuff.

It is chiefly in the form of snuff that tobacco is used throughout this country, whether among whites or among natives. This mode of consuming the weed prevails among the Monguls, the Burats, the Tungusi, the Yakuti, the Tchuktchi, the Aleutians, and all the aborigines of Russian America, from Behring's Straits downwards. Hence, one might reasonably infer that the use of tobacco travelled, at least into the northern parts of the new world, from Asia; and if so, the thing more probably took place before the commencement of Russian domination than after it, inasmuch as the Cossacks, who, however fond of tobacco in other shapes, did not take snuff themselves, were not likely to teach others to take it.

At Kosarki I found that the people were suffering from dysentery in its worst form, a complaint previously unknown in this quarter. The malady first made its appearance in some salt works, situated at the mouth of the Kuta, about fifty versts farther up the river, where it had carried off forty or fifty persons. Unfortunately,

there were no medical men in the neighbourhood at the time, who might have arrested the progress of the disease. In a country so poor and so thinly peopled, resident physicians are, of course, out of the question; but the government everywhere employs competent individuals to make circuits, and to report on the health of the inhabitants.

At this same station of Kosarki, all goods are transhipped, those going down being conveyed thus far on rafts, in order to be put on board of the large barges already described, and those coming up being transferred into small boats.

Our last station of to-day, Oostooskaya, lay at the entrance of the Kuta, occupying, I apprehend, the very site of the first building that was ever erected by Europeans on the Lena. Its very name would imply this much. Signifying, as it does, the city, or town, or station, or post, of the mouth of the stream, it could, with propriety, be applied only by those who had reached the spot not by the Lena but by the Kuta. In fact, this settlement, which was commenced in or about 1630, formed the grand centre of operations for the conquest of all Siberia to the eastward. On the one hand, the founders of Oostooskaya built Yakutsk as the first grand stage on the road to the Pacific Ocean; and, on the other, they established Irkutsk as the stepping-stone to Lake Baikal and the vast regions beyond it. It was from the Tonguska, the nearest feeder of the Yenissei, that the Cossacks made their way to the Lena, being more anxious, as already mentioned, to penetrate to the east than to the south; and it is a curious fact that, by ascending the Lena and crossing the height of

land to the site of Irkutsk, they were, in a manner, only retracing their steps to the principal auxiliary of the Tonguska. But, even if they had known that the Angara, rising far up in the fork between the Vittim and the Lena, would itself have carried them ten degrees more to the eastward, they would perhaps have considered the rapidity of its current as a sufficient reason for trying their fortunes on another stream.

Next forenoon, we obtained at one of the settlements a rather nauseous substitute for milk. It was water, in which the cones of the stone pine, after being crushed for oil, had been steeped. It had a reddish and whitish colour, something like a mixture of milk and brickdust, excepting that it was hardly so palatable. This was part of a fast of two weeks, very religiously observed in the Greek Church, though really I could not see why our milk should be stopped, inasmuch as most of us had no interest in the matter. On the 8th of August, our long voyage on the lazy Lena—lazy upwards, from the shallowness of its waters, as well as downwards, from the slowness of its current—came to an end. At Oostuginskaya, near the mouth of the Uga, we were delighted to learn that carriages were waiting at the next station to convey us to Irkutsk; and, accordingly, at Figoloffskaya we exchanged our inexpressibly indolent mode of travelling for one perhaps unrivalled in point of whirling, and jolting, and thumping. We took our seats in a tarantasse drawn by five horses, and a telega with three, while three vehicles, that had eight horses between them, followed with our baggage.

CHAPTER XVIII.

FROM FIGOLOFFSKAYA TO IRKUTSK.

Tyoomenzora—Vercholensk—Katschooga—Bratsky Steppe—Burat Settlements—Village of exiles—Koodinskaya—Irkutsk—Governor Patneffsky—Governor-General Rupert—Archbishop of Eastern Siberia—Chinese jealousy—Lake Baikal compared with Lake Superior—Mines of Nertshinsk—Trade of Kiachta—Steam on Lake Baikal—Mission of Selenginsk—Mines and washeries—Irkutsk, its hospitalities—Departure from Irkutsk.

The carriages in which we were now travelling had been sent to meet us by the Governor of Irkutsk, under the charge of a magistrate of police, who, after having waited for us a whole week, had been obliged, almost immediately before our arrival, to retrace his steps in person to the capital.

Being no longer exposed to the impediments which had retarded us on the water, we pushed on sharply all night, stopping merely to change horses, and to view some of the more important settlements on the route. At Tyoomenzora we breakfasted on eggs, cream, and strawberries, adding to these delicacies of the season, in the centre of Asia, a little of our pemmican, from the heart of North America—such a pic-nic between the two continents, as neither of them had ever seen before. Thus far the road had been bad, and at some places even dangerous, first looking down on the Lena from the edge of cliffs several hundred feet high, and then

descending, as if to renew our aquatic troubles, into the very stream itself.

After breakfast, our track lay along the base of some precipices of limestone. Soon, however, we entered a fertile valley, with our old friend, the peaceful Lena, still by our side, in which was prettily embosomed the ancient town of Vercholsensk. The level banks and the sloping hills on either hand were closely cultivated, excepting where clumps of trees had been left by way of ornament; so that in planting this, their original post, as the name would imply, towards the head of the stream, the Cossacks displayed as much taste and judgment in the selection of a site as ever the Jesuits displayed in Canada, or the Franciscans in California. Speaking of the signification of the name in question, *Verchney* and *Neshney*, respectively equivalent to *Upper* and *Lower*, would appear to be derived from the simpler forms of *Verch*—as in Vercholsensk, and Verchayansk, and *Nish*—as in Nishigorod, the abbreviated edition of Nishney Novgorod; and if one utterly ignorant of the language might still farther presume to offer another suggestion, which, if correct, might be the groundwork of extensive and important investigations, I should be inclined to trace some resemblance and connexion between *Nish* and *Verch* respectively, and our vernacular *Beneath* and *Over*.

At this town I was received with great attention. The whole population flocked to see the expected travellers, of whose importance they had received very exaggerated accounts; and amongst the crowd of our admirers we found a clerk of the Russian American

Company, who had brought a close carriage for my use all the way from Irkutsk. We called on a wealthy peasant, the occupier and proprietor of a beautiful mansion, where an old lady of eighty received us, performed the office of hostess to perfection, and was even a little offended at our refusing to partake of refreshment under her roof. This man was, of course, a peasant merely in name. Throughout Siberia, the descendants of exiles, generally speaking, are classed as serfs of the crown, being practically neither more nor less than unprivileged subjects; and such of them as may have risen above the rank of labourers, are as little liable to be dragged down from their actual position as any nobleman in the land. In the whole length and breadth of this portion of the empire, slavery, properly so called—the submission of one subject to the irresponsible caprices of another—is entirely unknown. In fact, there is not in the country, to the best of my knowledge, a single germ of a territorial nobility; and perhaps this peculiarity in the constitution of society has its bad side as well as its good, inasmuch as it exempts the great mass of the public functionaries from any local check, in the shape of an influence unconnected with themselves. But the very exiles themselves, to say nothing of their descendants, are virtually left to carve out their own fortunes. A well-dressed man, who spoke with a strong German accent, introduced himself to us. He proved to be a Gallician, who had been banished twenty-six years before for smuggling, but had raised himself, by his steadiness and talent, to be one of the most respectable inhabitants of the town. He had an

excellent house, with a very neat little wife in it; and, as a proof of the extent of his business and resources, he supplied all the horses for five successive stages.

According to the statement of my smuggling friend, the place contained a population of two hundred and forty souls; and though, from the number of the houses, I was inclined to prefer a higher estimate, yet my informant referred me to the unanswerable authority of the chequered post, which, according to the custom of the country, served as a standing record of a state of things, perhaps, twenty years old. Meanwhile, the Vercholskians had undeniably multiplied; but the worthy Gallician, having come so far to learn experience, had apparently made up his mind to take on trust every thing that had a legal look. These official values, as it were, of each settlement, are intended, to a certain extent, to regulate taxation in the gross, for considerable periods.

Hitherto I had had but five horses, three wheelers and two leaders; but from Vercholsk, as the road would be hilly, my wheelers were increased to five. Before reaching the next station we overtook the magistrate of police, who had waited so long for us at Figoloffskaya; and, after the ceremony of introduction was over, he joined our cavalcade, which thus consisted, in all, of seven vehicles and thirty-five or forty horses. We flew over the ground; the roads, the cattle, and the weather, being as fine as heart could wish. A stranger, however, would require a considerable amount of moral courage to permit himself to be driven along, at the rate of twelve or fourteen versts an hour, with so many uncontrollable hoofs and wheels behind him. Any ac-

cident, if it did not begin with a broken neck, would be sure to end with something still worse.

At Katschooga I was met by the head of the police and the principal inhabitants, and stopped to lunch with a rich merchant. I was here introduced to a chief, or taeshow, of the Burats, having the command and supervision of about five thousand of his tribe; he was a handsome man, wearing uniform, and possessing something of address and education. Though his authority was of the same subordinate kind as that of a prince-ling among the Yakuti, yet, in actual position, he was infinitely higher than our old friend Jacob. His subjects were as superior to our first specimens of the aborigines in civilization as they were in number—a fact easily explained by their more southerly situation. I had also the pleasure of being introduced to the wife of the head of the police, the prettiest woman that I had hitherto seen in Asia. She made a thousand apologies for her husband's neglect in not having gone some three hundred versts down the Lena, to meet me at the limit of his district; and, if the honest man had been guilty of a great deal more than what she was polite enough to impute to him, he would have been quite safe with such advocates on his behalf as her black eyes, glossy hair, pouting lips, and dimpling cheeks.

Katschooga appeared to be a thriving place, as one might expect from its being the entrepôt of the whole of the trade between Irkutsk and the settlements on the Lena. Some of the most influential among the inhabitants were exiles, to whom, so far as we could judge, no stigma was attached; and, in fact, considering the numbers sent to Siberia for political offences, or

even for not being able to give a satisfactory account of themselves, the mere idea of banishment could hardly be supposed to involve the same moral and social incidents among the Russians as among ourselves. A German, in relating his history to us without any apparent hesitation or reserve, playfully said, that he had come on a visit to Siberia, but had not yet made up his mind as to the time of his return; and an old man with a flowing beard, and altogether of very remarkable appearance, though this happened, by the by, at our next station, told us that, upwards of thirty years before, he had had the misfortune to commit a small mistake in Moscow.

At Katschooga we took our last swim in the Lena, an embrace, as it were, at parting. How different was the scene, when first we viewed the river on our approach to Yakutsk! To look at the stream itself, a breadth of seven versts had shrunk into two or three hundred yards; while its shores, instead of being a sterile flat in an inhospitable climate, were varied by hill and dale, wood and water, pasture and cultivation, skill and labour having done their utmost to heighten the charms which nature had bestowed with a liberal hand.

After crossing the Lena, we left it to pursue its way up a valley to the right, while we ourselves struck into a beautiful prairie to the left, through which flowed the small stream Issel, with many Russian and Burat farms on its banks. Thence a rise of about fifty feet took us into another plain of much greater extent, bounded by hills which were cultivated to their very summits. At the end again of this second expanse, which was marked

by the station of Chorbatskaya, we entered the Bratsky Steppe, so famous for its beauty. This magnificent prairie, through which meandered the beautiful Manzurka on its way to the Lena, was studded with Burat settlements, while thousands of cattle, horses, goats, and sheep, were grazing on the rich pasture all round, as far as the eye could reach. The surface was undulating; and on every side the landscape terminated in hills, which bore traces of artificial vegetation to their very tops.

While halting at one of the settlements, I was introduced to another taeshow, with whom I had the honour of drinking kumyss and eating sour milk in his own yourte; and I afterwards visited his son's yourte, to whose princess, arrayed in a curious mixture of barbarism and civilization, a sheepskin with plenty of plated-ware about it and an embroidered cap, I was presented with all due ceremony. The old chief was said to send annually to market grain to the value of thirty or forty thousand roubles, and to be worth altogether about twenty thousand pounds sterling in cash. The deputy or assistant of the taeshow had received orders from the Governor of Irkutsk to accompany me; and he accordingly here added one more to the number of my suite.

At Manzurskaya, which we thus reached with a formidable line of eight carriages, all the good people, young and old, rushed out of doors to see the English stranger, who, being only the second or third visitor of our nation in these parts, was, of course, a great curiosity.

Soon after leaving Manzurskaya, I began to be reminded,

by sundry hints not to be mistaken, that I had not closed my eyes for nearly forty-eight hours. The world, both in its sights and in its sounds, seemed to be getting into all the possible varieties of disorder and confusion; and at length I fell into a profound slumber, which the bells of the horses, the jolting of the vehicles, and the changing of our eight teams amid a discordant din of Russ and Bratsky, so little disturbed, that, when I awoke, I had no other evidence than the mere change of scene that I had been asleep at all. The drivers and horses had been succeeded by other bipeds and quadrupeds; the darkness had given place to broad day; and the landscape had expanded itself from the fertile valley of a murmuring brook, into a sea of plains, which, but for the villages, and the flocks and the herds, I might have taken to be part of the boundless prairies of the Assiniboine.

We were still on the Bratsky Steppe. The soil, though it was light and in some places sandy, had yet been fertilized by pasturage; and white clover was abundant. In order to secure a sufficient quantity of provender for the seven long months of winter, the borders of every stream, where the grass, of course, was more than ordinarily luxuriant, were set apart by fences for hay, while, still farther to increase the supply, large meadows were artificially irrigated.

At Yerdoffskaya, after stretching along a line of a hundred and sixty versts, the grand plain of the Burats gradually narrowed itself into a small valley; and thenceforward to Koodinskaya, the country strongly reminded me of some parts of Scotland, particularly of Strathpeffer. A short time before reaching the last-mentioned

station, we passed through a village of political exiles of distinction; and I saw peeping out of the windows many a face that betokened high birth, while the hearts of the owners doubtless thought rather of Moscow and Petersburg, to which we were flying, than of ourselves.

At Koodinskaya, where we breakfasted, I experienced an instance of civility which astonished me even in the peasants of this country. Intending to bathe, I questioned a man as to the depth and bottom of the river; and his only answer was, after stripping, to wade up to his chin, this giving me ocular demonstration of the quantity of water and the firmness of the footing. Our swim did us a great deal of good, for, independently of the heat of the weather, our outside horses had done little or nothing but kick up clouds of dust in our faces. In fact, we had discovered, that the grandeur of having five horses abreast was hardly worth the annoyance.

Seven or eight versts beyond Koodinskaya brought us to the top of a hill, whence we gained our first view of the metropolis of Eastern Siberia, lying on three rivers, the Angara, the Irkut, and the Oushakoffka. From this distance Irkutsk presented a fine appearance, with its fifteen churches and their spires, its convents, its hospitals, and its other public buildings. But this favourable impression vanished as we approached; and we were disappointed at seeing so little bustle in the wide streets, and so many edifices going to decay.

We entered the city over a long wooden bridge, rattling along with no small commotion, till we reached an excellent house, which the Governor had caused to be prepared for our reception. This mansion belonged to the great monopolist in the way of wines and spirits,

already mentioned under the head of Yakutsk, as paying so large a sum for an exclusive license in his trade. The leviathan himself was residing at Krasnoyarsk; but two of his agents introduced us into the handsomely furnished house, providing us at the same time with a dozen or so of attendants, of all sorts, sizes, and countries.

Having arrived about two in the afternoon, we were immediately visited by the principal magistrate of police, with a complimentary message from the Governor, who was followed by Mr. Dedoff, the agent of the Russian American Company. After dinner, my Russian fellow-traveller, who acted as our interpreter, left us, in order to make some arrangements for our future proceedings. To beguile the time, my other fellow-traveller and myself ventured to take a stroll through the town without a guide; and, after we had wandered about among the churches and shops till twilight came on, we turned our thoughts homewards, soon discovering that we knew neither the name of our street nor its situation. In this predicament we strayed at random from place to place, in hopes of meeting some person acquainted with English or French; and at length a gentleman in a drosky, who must have suspected the truth, conducted us to Mr. Dedoff's. As that gentleman could not understand a word that we uttered, he was, of course, a good deal astonished at so unseasonable a visit. Like a true Russian, however, he gave us a hearty welcome and a bottle of champagne; and, when at length we explained the mystery to him by signs, he sent us home in his drosky about midnight.

Next morning, being the 11th of August, I received,

in addition to several complimentary visits, a still more solid proof of politeness and attention. A handsome carriage with four magnificent grays, as also a smaller vehicle and pair, were placed at my disposal by the Governor, with postillion, footman, and bearded coachman, all complete. I was now able to make a round of calls in princely style, beginning, as in all duty bound, with the Governor. His Excellency, M. Patneffsky, proved to be a civilian, the first person of his class whom I had yet seen holding an important office in Siberia; he was a middle-aged, affable, intelligent man, and welcomed us very courteously. He made many inquiries with respect to my voyage, such as whether I had found police officers and postmasters civil, vehicles, horses, and provisions good, &c.; and he concluded by inviting us all to dinner for the same day.

I next proceeded to the country residence of General Rupert, the Governor-General of Eastern Siberia, a gray-headed, handsome, soldierly man of sixty. He informed me, that he had the Emperor's commands to facilitate my movements in every possible way, and was pleased to add that he should individually derive great satisfaction from the fulfilment of his instructions. I accordingly explained, that my own intentions then were to start next day for Lake Baikal and Kiachta, to return as quickly as possible, and, lastly, to resume my homeward journey the day following that on which I might get back to Irkutsk. His Excellency recommended that I should remain another day before entering on my southern trip, assuring me that this trifling delay would really occasion no loss of time, as it would better enable him to despatch orders as far as the

western limits of his jurisdiction to have horses, &c. ready for us along the route. Such a recommendation would, of course, have been equivalent to a command, even if his Excellency had not specially forestalled the morrow by inviting us to dinner.

I called again on my friend Mr. Dedoff; and we were all very merry over our adventures of the preceding night. This gentleman's house had been the Russian American Company's place of business ever since the association existed under any form; and he himself had been in the service for more than forty years. Besides Mr. Dedoff, there were at this establishment three clerks and several servants, with hired labourers for particular occasions. All these agencies in Siberia, restricted, as they are, almost exclusively to the business of transport, must be a heavy drag on the Company's resources.

At the Governor's, where we had, of course, an excellent dinner, the party was small, consisting only, besides his Excellency and his lady, of a councillor and a doctor, with their wives, and ourselves. In fact, we had heard, as far down the Lena as Kirensk, something that explained the circumstance. As Yakutsk had its feud between Governor Roodikoff and Mr. Shagin, so Irkutsk again, entirely eclipsing its northern rival in this respect, had its feud between General Rupert and Governor Patneffsky; and we had accordingly been prepared to find society in a divided and disjointed condition.

After dinner, which was at two o'clock, Madame Patneffsky took us into her workroom, in which, to say nothing of a number of Chinese curiosities, was the lady's own loom, with the most superb piece of embroi-

dery in it that I ever saw. The Governor afterwards showed us his valuable collection of minerals, comprising some splendid specimens of aqua marina, topaz, amethyst, gold ore, and various other metals and stones found in Siberia; and we understood, that one of the blocks of topaz in particular was the third largest in the world. His Excellency informed us that gold had recently been discovered in some marshes, or *toondri*, close to Irkutsk.

On the following day, I had the honour of receiving visits from the Governor, the Mayor, a councillor, and lastly the brother of one of the medical gentlemen of New Archangel. I afterwards paid my respects to the Archbishop of Eastern Siberia, who in England would have been reckoned very young, being not more than thirty-five or forty years of age, to fill so important an office. On my entering, he rose to receive me, and, taking me apparently for an obedient child of the Greek Church, held out his hand for me to kiss. Being ignorant of the custom, I gave him a hearty shake, for I really was prepossessed in his favour at first sight; and, though I observed him withdraw his hand awkwardly from my grasp, yet I did not precisely see the error of my ways, till one of the party went through the orthodox ceremony with all due devotion. The archbishop conversed readily on the subject of the spiritual welfare of the vast country committed to his charge, telling us that, besides his metropolitan jurisdiction over the Bishop of Sitka, his immediate diocese comprehended all Eastern Siberia, with the exception of course of Kamschatka and Ochotsk. The good prelate complained that the prevalent mania for searching for the

precious metals, which had of late been greatly aggravated by the productiveness and extension of the mines and washeries, was prejudicial to the prosperity of agriculture, and, in a certain degree, to the diffusion of Christianity; nor did he appear to think that an equitable return was made from the west side of the Uralian Mountains for the vast quantities of silver and gold which were annually sent across them from the east.

The archbishop had nothing austere or repulsive in his manners. He was, on the contrary, most affable and courteous; while his conversation showed that, without diminishing his interest in his own sacred vocation, he had acquired a large fund of general knowledge, and had mixed much in the world. I spent with him one of the most interesting hours of my long and varied journey; and, in fact, I might truly say that no other individual of whom I saw so little in my travels stood higher in my estimation than the primate of Eastern Siberia. If my former acquaintance of Sitka and this his immediate superior were to be considered as average samples of the prelates of the Greek Church, the whole of them, as a body, would certainly form a hierarchy inferior in dignity and respectability only to that of our country.

A trip to Kiachta and its Chinese neighbour, the village of Maimatschin, I had always regarded as likely to be one of the most entertaining portions of my voyage; and what was my disappointment to receive, at the very moment of intending to start, a hurried note from Governor Patneffsky, stating that, according to information just obtained by his Excellency, the Chinese, without assigning any reason, had suddenly interdicted all communication with foreigners of every nation. This

was a death-blow to my cherished hopes of bringing "the flowery people" within the range of my travels. Though the prohibition in question was general, yet I could not help being vain enough to infer that my own little party was the special object of celestial jealousy. The authorities at Maimatschin had had plenty of time to hear of the contemplated visit of English travellers; and they might either have suspected us of being spies, or have thought that, at that particular time, they had already too many of "the fierce barbarians" on the other side of "the central land."

But as all the preparations for my journey had been completed, I determined to go at once as far as the Baikal Lake, distant about sixty versts from Irkutsk. The road was good, lying for the most part along the bank of the Angara, whose rapid current formed a striking contrast with the sluggish waters of the Lena; and in a few hours we reached the point at which the river was gushing from its inexhaustible cistern. At the first glance of this the largest body of fresh water on the old continent, my thoughts flew back over my still recent footsteps to that parent of many Baikals, the Lake Superior of the new world; and I involuntarily reflected, with some degree of pride, that no preceding traveller of any age or nation had ever stood on the shores of the two greatest of the inland seas of the globe. Even if my previous wanderings through the wildernesses of North America had not given me any personal interest in the matter, I could hardly have refrained from indulging in a comparison between the Baikal, on the one hand, and the Superior, with its great progeny, on the other.

In mere position they resemble each other in a very remarkable manner. Touching, though in opposite directions, one and the same parallel of latitude, they are intersected, at the outlet of the Ontario and at the western extremity of the lake before us, by one and the same circle of longitude—almost the very meridian, by the by, of the highest and lowest extremities both of Asia and of America—of the head of Baffin's Bay, and of the western entrance of the Strait of Magellan—of Cape Tayman, and of the southern point of the Peninsula of Malacca. With respect to the extent of country drained, the Baikal has certainly the advantage of all its American rivals put together; for, while the latter are pressed in every direction by the heights of land, the former is fed by its two principal tributaries from sources distant from each other in a straight line at least a thousand miles.

But, if from the adjacent regions we turn our attention to the ultimate destination of the waters which are received, the reservoir of the St. Lawrence infinitely surpasses that of the Angara, for, while the latter stream loses itself in an always impracticable ocean, the former, annually bearing upwards of a thousand sea-going ships on its bosom, forms the channel of communication between the most commercial country on earth and her most important colony. Moreover, the reservoirs themselves, in point of navigable utility, bear pretty much the same relation to each other as their outlets do. Though, with the exception of the Superior alone, every one of the connected lakes of North America, the Huron, the Michigan, the Erie, and the Ontario, is traversed, both in its length and in its breadth, by

considerable numbers of sailing-vessels and steamboats, yet the Baikal is little better, in regard to traffic, than a barren waste. Surrounded by lofty mountains, whose precipitous sides sink at once into the bottomless waters, it possesses but few harbours or anchorages; formed with a length of ten times its breadth, it is subject at once to violent gales, which blow along it as through a funnel, and to sudden squalls, which sweep across it as they rush down from the defiles of its amphitheatre of hills; and situated in a bed, which looks like the work of the volcano and the earthquake, it is still liable to be dangerously agitated, without any visible cause, by subterranean energies. To make matters still worse, the craft in use, apparently carrying from eighty to a hundred tons each, are the most awkward, clumsy, crazy tubs in the world. Under all these circumstances, nearly the whole of the vast traffic, which is carried on between Irkutsk and the boundless regions beyond the Baikal, either passes in sledges over the frozen lake, or is conveyed round its southern extremity by rugged and perilous roads.

The traffic in question is connected partly with the mines of Nertshinsk, but chiefly with the international emporium of Kiachta.

Nertshinsk is famous for gold and silver, lead and iron; and its various establishments are the ordinary destination of convicts of the worst class. So long as the Amoor remains closed against the Russians, all the incidental transport must either cross or double the Baikal, on its way to and from Irkutsk; and, even if the Amoor should follow the political fortunes of all the other great rivers of Northern Asia, the present line of

communication between Nertshinsk and Irkutsk would gain far more than it could lose, by being extended all the way to the Pacific, sacrificing perhaps part of the business of the mines, but almost entirely superseding the route by Ochotsk and Yakutsk. Nertshinsk, by the by, stands on a tributary of the Amoor. It is the remotest place of any note in that quarter of Siberia; and it is remarkable as the spot at which the Russians reluctantly consented to stop in their eastward progress, as, in fact, the only spot in the wide circuit of their empire at which they ever permanently halted in their career of conquest.

With respect again to Kiachta, the treaty of Nertshinsk, to which I have just alluded, stipulated, in general terms, for a reciprocal liberty of trafficking between the Russians and the Chinese; and accordingly, under its sanction, individuals on their own account and caravans on behalf of the government used to visit Peking. But the Muscovites constantly set so bad an example before the sedate folks of the imperial city in the way of drinking and roystering, that, after exhausting the patience of the celestials during a period of three-and-thirty years, they were entirely deprived of their commercial privileges in 1722. After all intercourse between the two nations had ceased for five years, the Russians, having first made some concessions and apologies, obtained a new treaty in 1728, by which, in order to prevent future misunderstanding, the international trade, so far at least as private individuals were concerned, was to be conducted on the international frontier; and on the very ground, which the diplomatists occupied during the negociation, Kiachta was soon

afterwards built. Still, however, Kiachta found a rival in Peking, for public caravans were permitted by the new treaty to penetrate as before to the capital of the celestials; and it was only in 1762 that Catherine the Second, by relinquishing the imperial monopoly in question, rendered this little town the grand, if not the sole, emporium of the commerce between Russia and China.

Kiachta stands on a brook of the same name, which, rising in Siberia and crossing the line of boundary, washes also, at the distance of half a furlong, the Chinese village of Maimatschin. Taken by itself, the position has nothing to recommend it. It is beset on all sides by rugged mountains; and the streamlet, which forms a bond of union between the most extensive empires in Asia, or perhaps in the world, is so inconsiderable, that, even with the aid of damming, it often fails to afford an adequate supply of water to the dwellers on its banks. The two settlements are situated, as nearly as possible, on the fiftieth parallel of latitude, being about a thousand miles from Peking and about four thousand from Moscow. Though the Chinese route to this secluded mart is vastly shorter than the Russian one, yet it is, at least in some slight degree, certainly less practicable. At the distance of about a week's march to the northward from Peking, the Chinese have still before them a journey of forty days and upwards through a dismal desert of table-land, parched with heat during one half of the year, and covered with snow during the other. The Russians again, whether they come from the west with manufactures, or from the north and east with the produce of the chase, enjoy the advantages of a peopled country and of navigable waters nearly all the way to

Irkutsk ; and, when they have met at this the common centre of all the lines of communication, they may, and often do, prosecute the rest of their journey to the very neighbourhood of Kiachta, by crossing Lake Baikal and ascending its principal feeder, the Selenga.

The Russians bring chiefly furs, woollens, cottons, linens, &c.; and the Chinese principally teas, silks, sugarcandy, &c. But, in order to convey to the reader more definite and accurate notions on a subject so interesting to many classes of our own population, I shall subjoin the substance of an official statement of the trade of 1837, premising that the Russian goods are valued at their actual worth, but that the Chinese commodities are estimated at rates laid down by agreement in 1800.

To begin with the Russian side of the market: the whole of the wares, foreign as well as native, amounted to 19,501,281 roubles—the native being 16,792,082, and the foreign 2,709,199. Of the native wares, the furs, embracing the incredible number of 2,931,347 squirrels, were 7,406,188 roubles; the woollens, 5,156,296; the cottons, 1,722,747; the linens, 522,279; and the leather, entirely whole hides, 1,508,395; so that the furs alone were about 5,000 roubles more than the linens, and the cottons, and the woollens, taken together; and of the less important articles, amounting in all to 476,177 roubles, the works in tin, iron, steel, brass, copper, and lead, were 76,595; mirrors, 162,956; and grains, of various descriptions, 88,110; while a host of manufactures and productions were valued, under the head of sundries, at 148,516 roubles. In addition to glue, isinglass, and tale, the

sundries in question comprised many things, such as China, two or three ages ago, did not expect to import from Russia—542 reams of writing-paper, and about 4,000 pieces of crockery for the tea-table; and this sending, as it were, of coals to Newcastle, however trifling the quantity, would appear to place in the most striking light the superiority of the material civilization of Europe over that of Asia. Again, of the foreign wares, the furs, very nearly half of the amount being the value of lamb-skins from Bokhara, were 1,041,661 roubles; and the manufactures of all kinds, nearly two thirds of the whole being velveteens and camlets, were 1,667,538.

To come to the Chinese side of the market: the total value of all manufactures and productions, according to the principle of valuation already laid down, was 7,697,357 roubles. But, as the trade is exclusively conducted by barter, without the intervention of either coin or bullion, the actual worth must have been at least thrice this amount, consisting of the declared value aforesaid of the Russian goods and of the duties on the exportation of the same. With respect to the different articles taken in detail, the official statement, from which I draw my information, does not specify any valuation whatever, limiting itself generally to number and weight. Of black tea, there were about 77,000 packages, which weighed 133,274 poods; of green tea, all of the best quality, there were about 420 packages and 625 poods; and of brick tea, there were 9,320 packages and 654 pieces, weighing between them about 28,000 pood's. Of sug rean 'y, there were 3,546 poods; and of apples and other fruits, there were

rather more than 91. Of manufactured articles, silks and cottons, neither of them in any great quantity, formed the staple; while, of writing-paper, there were only 1,500 sheets; and of porcelain, 4,154 cups; with 9,900 cups of wood.

Besides all this wholesale trade, a retail traffic is conducted for the express purpose of supplying the Chinese with the agricultural productions of the country beyond the Baikal.

On the Russian side, this retail traffic amounted to 719,531 roubles in all, the value of individual articles not being specified. As this branch of the international commerce throws considerable light on the economical condition of the two empires at this their principal point of contact—showing fertility to the north of the line of boundary, and barrenness to the south of it—I extract the entire table, just as I find it, from my official statement:—

Iron manufactured	150 poods.
Soap	269 "
Tallow candles	51 "
Harts' horns	386 "
Wheat flour, fine	6,010 "
Do. do. common	36,637 "
Rye do.	112,848 "
Wheat	119,386 "
Rye	24,507 "
Barley	12,759 "
Peas	3,567 "
Oats, buck-wheat, meal, and pea-flour	398 "
Beef and mutton	4,695 "
Fat	1,711 "
Butter	854 "
Mushrooms, dried	618 "

Bread	368 poods.
Fish	273½ „
Flax or hemp, prepared for spinning	.						3,670 hanks.
Horn combs	5,510 pieces.
Eggs	117,845
Geese, ducks, and fowls	.	.					8,194
Sheep	7,350
Pigs	2,172
Camels	137
Horses	1,338

In former times, this business was still more extensive, as well as more profitable ; till, at last, the Chinese induced the Mongols to cultivate the banks of the Orkhon, a tributary of the Selenga, thereby exciting a competition against the Russian and Burat settlers on the lower waters of the latter stream.

Again, on the Chinese side, the retail traffic amounted, according to the principle of valuation already laid down, to 398,157 roubles ; being fully one-third higher in proportion than the equivalent for the Russian commodities in the wholesale trade. This advantage, however, on the part of the Muscovite retailer, is more likely to have been apparent than real—more likely to have arisen from a different selection of celestial articles than from a higher profit on native productions. In point of fact, the selection was as different as one could well have imagined. Of black and green teas, there was little or nothing, barely 315 poods ; while, of most other things, there was a proportional increase ; and, of some things, even an actual preponderance. This will be made clear by the following comparison, keeping in view that the wholesale trade of 1837, on the side of

the Russians, was twenty-seven times as valuable as the retail trade :—

	<i>Wholesale.</i>	<i>Retail.</i>
Sugarcandy . . .	3,546 poods.	1,410 poods.
Cups of porcelain . .	4,154 pieces.	562 pieces.
Do. wood . . .	9,900 „	17,971 „
Brick tea . . .	28,000 poods.	29,136 poods.
Raw silk . . .	12 „	47 „
Cottons . . .	13,021 pieces.	18,095 pieces.
Nankeens . . .	8,290 „	30,923 „

With the single exception of the raw silk, every one of these results may be explained by the fact, that the retail dealer selects his equivalents with reference to the local demand of Siberia ; while the wholesale trader turns his attention to the more aristocratic markets of Nishney Noygorod and Moscow.

The grand season for business is the winter. There is not, however, any regulation to this effect ; for the barter begins just as soon as the goods on both sides have reached the scene of operations. Though, in some of the immediately preceding years, the trade had commenced as early as November, yet, in 1837, it did not commence before the 20th of January, or, according to our reckoning, before the 1st of February. In disposing of their commodities, the Chinese have a considerable advantage, inasmuch as their teas never remain unsold in Maimatschin ; while the Russian goods, partly through a diminution of the demand, and partly through the artifices of the celestials, are often so depreciated in value as to wait to a second, or perhaps even a third year for a market.

The Chinese send their purchases on camels, and in

carts drawn by oxen, to Kalgan, where the goods are, for the most part, again sold to other buyers; and in this way they find immediate use for the beasts of burden required in the retail trade; for they have to carry to the south, including the agricultural produce, a far greater bulk than what they bring to the north.

The Russians convey nearly the whole of the returns, at least of the wholesale trade, to Nishney Novgorod and Moscow, availing themselves, in general, of the waters of the Yenissei and the Oby, by descending one branch and ascending another, and so on, as far as Tiumen on the Tobol; while one is lost in wonder to reflect, that, after all their windings and wanderings, the teas and silks of China visit the great fairs of European Russia only to commence, in many cases, a new series of distant travels. From Nishney Novgorod, for instance, a large quantity even of so coarse an article as brick tea is annually despatched into the province of Astrakhan, for the use of the Calmucs. At our wages of labour, no goods, unless of the most costly description, could bear the expenses of such a transport; for even in Russia, with its remarkably low rates of remuneration for man and beast, the freight is startling in its amount, being about forty pounds sterling a ton between Moscow and Kiachta. On this point, my official statement aforesaid furnishes tolerably complete information. In 1837, the average prices of carriage to Kiachta for a pood were, in roubles and kopecs, as follows:—

From Moscow	15.47
„ Nishney Novgorod	12.65
„ Kajan	12.30

From Tiumen	6.57
„ Tomsk	5.91
„ Krasnoyarsk	3.00
„ Irkutsk	1.05

As the cost of transport of 105,000 poods from all places was 820,000 roubles, being an average of 7 roubles and 80 kopecks, a very large proportion of the whole weight must have been brought from the Asiatic side of the Uralian Mountains, so as to reduce the carriage all overhead to something like three-fifths of the rate even from Kazan. In fact, a considerable quantity of the manufactures did come from Tiumen. But the gross freight to the westward was fully thrice the total amount just mentioned, having been 2,500,000 roubles. Besides being themselves heavier than their equivalents, the teas were secured, every chest of them, in raw hides against all damage; and the packages, over and above being thus increased in weight, were nearly all sent, paying, of course, the higher rates of transport, to Nishney Novgorod and Moscow. Enormous as all this expense is, when taken in the mass or stated by the ton, still, the cost of fourpence a pound avoirdupois, scarcely equal to a middleman's gain, is not a very alarming addition to the price of rich silks and fine teas. The inland freight from York factory to Red River Settlement is about the half of that between Kiachta and Moscow; and yet the Hudson's Bay Company sells everything but the very heaviest goods at considerably lower rates than any retailer in the Canadas, excepting, perhaps, and only perhaps, in the larger towns. The moral of the whole is this, that all the delays and obstacles of nature are as nothing, when compared with

the artificial burdens of repeated transfers and of long credits, of intermediate profits and of bad debts.

How far the trade of Kiachta will be affected by the opening of certain ports in China to all nations, time alone can tell. Even if part of it, as is likely to be the case, be diverted to the coast, the deficiency will, in all probability, be more than supplied by that growing taste for foreign productions, which a more extensive intercourse with foreign visitors is sure to cherish. So far, at least, as experience goes, the Russians have no great reason for apprehension, inasmuch as the abolition of the East India Company's monopoly, which might have been expected vastly to enlarge the maritime commerce to the prejudice of the inland traffic, was actually followed by a considerable increase of the business done at Kiachta. But the truth is, that the Russians enjoy peculiar advantages, both local and political. The black teas of Maimatschin, which are far superior to anything of the kind that is ever seen in England, are produced in the north of China, and may be more cheaply transported to Siberia than to Canton; and again, Russia alone, of all the states on the face of the earth, possesses a national establishment in Peking, for the education of her youth, and the ministrations of her religion; being probably more disposed to make the requisite submissions for soothing the pride of the celestials than if she were standing on the coast in the presence of jealous rivals.

To return to Lake Baikal: the transport between Irkntsk, on the one hand, and Kiachta and Nertshinsk, on the other, which must either cross that upland sea, or double it, cannot be estimated at less than four hun-

dred thousand poods a year, besides passengers. Now, all that is wanted, in order to enable this large business to take the shortest route, and thereby economize both time and money, is the introduction of steam. I accordingly suggested this scheme to some of the inhabitants of Irkutsk ; and I mentioned to the Governor in particular, that Moore, the engineer at Sitka, would next year be passing through Siberia, and might be useful to any adventurers willing to embark in the project. Though I was uniformly assured that the thing was impossible, inasmuch as no steamer could live during the windy seasons, I yet felt satisfied that the plan not only was practicable, but would be profitable. According to the public prints, the impossibility—that beast of a word, as Napoleon is said to have styled it—has, since then, been achieved ; so that goods either now are, or soon will be, carried to and from Irkutsk, without breaking bulk, by the Angara, the Baikal, and the Selenga. But the mere economy of money and time will be the least part of the benefit. The settlement of the country will be promoted ; agriculture will be rewarded ; and commerce will be encouraged ; while, last though not least, an invaluable impulse will be given to the general mind for the effecting of public improvements.

The Baikal is about seven or eight hundred versts in length, and about seventy or eighty broad, at its widest part. Its waters are as clear as crystal, everywhere deep, and in many places unfathomable. Besides the numberless cascades that rush down its wall of mountains, it receives many rivers, more especially the Angara, at its northern extremity, and the Selenga, on its eastern

side, towards the south; and its single outlet, in spite of the superior claims of the Selenga, on the double ground of position and magnitude, professes in its name to be a continuation of the remote and comparatively inconsiderable Angara. The two Angaras are sometimes distinguished from each other as Upper and Lower. The quantity of water which issues from the lake, is believed to be vastly less than that which flows into it—the difference being, in all probability, too great to be explained by evaporation alone. In this view of the thing, a large portion, as a matter of course, must be absorbed—an operation which the volcanic origin of the huge hollow may be supposed likely to facilitate. In fact, the lake presents certain features which have induced individuals to infer that it has a subterranean communication with the ocean. It is the only body of fresh water in the world that possesses seals; and when agitated, in the way already mentioned, by invisible causes, it throws up to its surface quantities of small fish, which are never seen at any other time. In illustration of the mysterious agencies of nature, which produces the same ends by contrary means, I subjoin two passages from Baron Wrangell's interesting work:

“ These flat valleys are occasionally filled with water, by the overflowing of the rivers in spring, when they form lakes of various sizes, all very full of fish. The intense frosts of winter cause large clefts in the ground, by which the water drains off, sometimes in the course of a single year, sometimes in several.

“ A curious phenomenon occurs in the lakes in the vicinity of the village of Alaseya. In the middle of winter, the water sometimes suddenly disappears with-

out any side-channels being visible. In such cases, a loud noise is heard at the time the water disappears, and, when the bottom of the lake is laid bare, large clefts are visible, occasioned by the severity of the frost."

The Baikal contains a vast variety of fish, no fewer than fourteen sorts of the salmon alone. Of the salmon, the omal is but a little larger than the herring, which, in fact, it resembles so closely in flavour as, to my taste, not to be distinguishable; still, however, it has the scales and teeth of its own tribe. In this lake, sturgeon also are taken, weighing as much as four hundred pounds. Most of the fish, as well as the seals, confine themselves to the Baikal, being never found in the waters of the Angara; and the omal in particular is said never to be seen anywhere else, excepting in the Polar Ocean, the Sea of Kamschatka, and a certain pool in Siberia that has no outlet.

Till very lately, the country beyond the Baikal presented another object besides Kiachta, which, of itself, might have induced me to cross the lake. About five and twenty years ago, several English missionaries of the Protestant faith were established, under the patronage, and partly also at the expense, of the Emperor Alexander, among the Burats of the Selenga; and this specimen of religious liberality, unmatched in any other country in Christendom, was still permitted to work its way under the auspices of the Emperor Nicholas. But these devoted exiles, less fortunate in this respect than their brethren of the Sandwich Islands, found that a bad religion, whatever might be its countervailing merits, was a worse enemy of the pure and simple Christianity

of the Bible than no religion at all. The Burats professed the lamaism of Thibet, with its dominant priesthood and its whole libraries of creeds and commentaries; and, under the influence of their hereditary prejudices, local and national, social and political, literary and ecclesiastical, they deliberately and obstinately preferred the flickering glare of their own idolatry to the genuine light of the gospel. In a word, the missionaries, to the best of my knowledge, made not one real convert, while they were still more seriously discouraged by the fact, that every pretended proselyte openly relapsed as soon as he had gained the secular ends of his interested hypocrisy. About two years ago they retired from the barren field of their zealous labours. For this step, in addition to the mere despair of success, two immediate causes were assigned. From political motives, the Russian government was said to be anxious to conciliate lamaism; and the Greek Church had its jealousies roused by the suspicion that the baffled Protestants were striving to prevent the Burats from embracing any other form of Christianity than their own.

About seven or eight versts beyond the outlet of the Baikal, somewhat ambitiously distinguished as "The Port," we passed the night at Lestvennechnain, having reached this station by a road cut on the face of a hill, overhanging the lake, and protected by a parapet wall towards the water. At the distance of forty versts from Lestvennechnain there was a gold washery, which I could not spare time to visit. In fact, a traveller would never get along through Siberia, if he were to allow himself to be infected with its endemic mania; for the whole surface of the country, from the Uralian

Mountains to the Yablonnoi Chain, would appear to be one vast bed of the precious metals. The government reserves to itself all the mines, turning them to excellent account, both as sources of revenue and as penal colonies. The washeries, however, are open to private enterprise, on paying to the crown a tenth of the proceeds. When capitalists wish to embark in the business, they employ peasants of experience to make a survey of a certain district of country ; and, as soon as any favourable ground is discovered, application is made to the authorities for a licence to commence operations. Volunteer labourers are easily found on condition of being fed and clothed, and of participating in the profits ; and there have been instances in which peasants have earned fifty roubles a day, during the two or three months of the working season.

Having returned to Irkutsk on the following day, I learned that I might have gone to Kiachta after all, without much risk of disappointment. If General Rupert had been informed in time of the interdict which had deterred me from attempting the journey, he would have sent an officer with us for the express purpose of offering any necessary explanations, and of thereby gaining us admission into Maimatschin. On the whole, however, I thought that things had been ordered for the best ; for the Chinese, after they had got me within the gates of their village, might have kept up the metaphor of the celestial character of their empire, by never letting me out again.

The three days which I spent in Irkutsk after my return were passed in a constant succession of hospitality and festivity. I experienced marked attention and

kindness from all the principal inhabitants, particularly the Governor-General, the Governor, the Mayor, Prince Galletzen, M. Dedoff, M. Sofronoff, the distiller, and M. Chezolet, a leading merchant of the place. In the house of General Rupert we were entertained with all the pomp and magnificence befitting the dignity of the Governor of Eastern Siberia and Commander-in-Chief of the Cossacks. The dinner was served in an oval hall of spacious proportions, which was thronged with servants; a military band in the orchestra played at intervals; and our host and all his male guests, excepting ourselves, were arrayed in glittering uniforms. There were present Madame Rupert, with her six highly accomplished and remarkably interesting daughters, and two little boys, three aides-de-camp, and a doctor. The viands, both solids and liquids, were in the greatest variety and of the choicest kinds. Before taking our leave, we were conducted by his Excellency into his extensive museum of curiosities, minerals, &c., considered as the most valuable in Siberia. I was particularly struck, while going round the premises, with two dwarf ponies brought from Peking, of most symmetrical forms, and also with a magnificent charger, presented to the General by the Grand-Duke Michael.

After dinner, which was all over by half-past three, we spent a delightful evening with M. Dedoff, who had invited Prince Galletzen, a most agreeable companion, to meet us. Our banquet at the mayor's was the most sumptuous display of the kind that I saw during the whole course of my travels. We had melons, pineapples, champagne at eighteen roubles a bottle, or nearly ten pounds sterling a dozen; and, in short, the arrange-

ments in general would have done honour to a royal table. M. Medvednikoff, however, could well afford the expense, being believed to be worth five millions of roubles. In truth, the merchants of Irkutsk, dividing with their brethren of Moscow the bulk of the trade of Kiachta, might well be styled princes. Their houses were palaces; and, in fact, the official residence of the Governor-General had once belonged to a merchant, the father of Madame Medvednikoff. Speaking of this lady, who was said, by the by, to be the belle of Irkutsk, we met on this occasion a very extraordinary old fellow, in the person of her uncle. He was a millionaire, and a complete miser. His house looked as if it had been built for the mere purpose of shutting out the world, presenting to the street a dead wall, with the exception of a door of sulky and inhospitable dimensions; and he was said never to admit any human being within his portals, unless to his single annual entertainment. On this one day of the year, pride, with an inconsistency common enough to the tribe of skinflints, got the better of avarice. The apartments of the den, which were gorgeously finished and luxuriously furnished, were ostentatiously thrown open, while the tables would groan, the more deeply, of course, from want of exercise, under a profusion of the most costly dainties.

Siberian entertainments, however, are not without their little drawbacks. Before dinner, all the guests drink schnaps out of the same glass, eat caviare and herring with the same fork, and help themselves to preserves with the same spoon; and, during dinner, changes of knives and forks are unknown. These barbarities I witnessed even in the elegant establishments

of the three highest official functionaries in Irkutsk, the Mayor, the Governor, and the Governor-General.

Irkutsk, in spite of all its magnificence and wealth, presented a melancholy appearance of dilapidation and decay, the wide streets being almost deserted, and many of the houses tumbling into ruins. The population was said to be about twenty thousand. Of public buildings there was no lack. The churches, convents, and hospitals, were fully worthy of a provincial capital; and one new church in particular was in course of erection, which was to have its cupola covered with silver. Among the charitable institutions I was especially pleased with a school intended for the maintenance and education of fifty female orphans, though happily, at present, only thirty-eight of these unfortunates could be found. The girls receive such a training as is likely to render them useful in life; and, at the age of sixteen, they are generally provided with situations.

On the day of my departure, I paid and received several farewell visits; and I really bade adieu to my kind friends of Irkutsk with great regret—a regret which could not fail to be felt by any stranger, who, after passing through a wild and almost uninhabited country, had suddenly entered a city where he had had unbounded hospitality lavished on him. We provided ourselves with two tarantasses for the journey. As the seasons are so short and the means of accommodation on the road so scanty, these carriages are so constructed, that one can travel by night as well as by day, without altogether sacrificing the form of going to bed. At the bottoms of our vehicles we could stretch ourselves, in order to obtain such repose as our rapid progress over

rough roads might admit. By order of the Governor, a magistrate of police, in whose charge was placed our *podoroshnoya*, was to precede us along the road, and see that everything requisite was prepared for us beforehand. We were allowed one horse for each passenger, three animals for my *tarantasse*, and two for the other. For each of our five beasts we paid seven kopecks a *verst*, being something less than five farthings a mile; while each of our two postboys had a fee, according to the length of the stage, in the proportion of two roubles to three *versts*. But where more cattle were really rendered necessary by the state of the roads, they were to be furnished, without any additional charge. Such were our arrangements for our overland journey of about four thousand miles.

CHAPTER XIX.

FROM IRKUTSK TO TOBOLSK.

Accidents—Mode of foraging—Convicts—Nishney Udinsk—Discomforts of travelling—Alzamoos—Peasant's house—Colonization of Siberia—The Burassa—Kansk—An exile's establishment—Krasnoyarsk, delays—Mines and washeries—Chief of the Burats—Ostrog for convicts—Kosulskaya, quarrelsome postmaster—Atchinsk—The Tchulim—Dilapidated tombs—Inquisitive hostess—The Kia—Kyskal—Tomsk—Crawley an albino—False information—The Tom—Tartars—Barabinsky Steppe—Gipsies—Ubinskoi—Kainsk—Condition of peasants—Omsk—the Irtysh—Tobolsk.

On the 15th of August, at seven in the evening, we left Irkutsk, crossing in a ferry-boat to the left bank of the Angara, and accomplishing, before midnight, two stages of twenty-five versts each. The weather, which had been threatening us for some days past, now began to be as good as its word, and torrents of rain fell during the night. With roads, which were bad at the best, this was rather an uncomfortable omen for people in a hurry; and we, of course, made ourselves as miserable as possible. To be jolted through four thousand miles of quagmire was by no means a pleasant anticipation.

Next day, something like real trouble seemed to thicken upon us. In the morning, my Russian companion's axle took fire, and occasioned some detention. In the evening, his reins, through the driver's carelessness in letting them go, got entangled round the wheel, and brought up the horses with a jerk. One of the

animals had his hind-legs broken, while the other was choked to death. Had there been a knife at hand, the creature might have been saved from strangulation. But neither master nor man had such an article, while the postboy could not legally carry about him any weapon of the kind; and our carriage was out of sight.

Till the afternoon, the weather was raw and wet. The country appeared to be almost exclusively appropriated to pasturage; and it would have been uninteresting, on account of its flatness, had it not been covered with flocks and herds. We passed many populous villages, as also some salt works and other manufactories.

On the 17th, we accomplished a hundred and twenty-five versts before breakfasting at Sharaboo. Talking of eating, we had only two meals a day, being indebted even for them to the exertions of my servant. The stations did not profess to supply us with food on any terms; and we had consequently to forage and cook for ourselves, getting very little for our pains but coarse bread and tough fowls. So far, however, as horses were concerned, we regularly derived great benefit from the proceedings of the police officer who was ahead of us.

The roads were bad, while many streams were to be crossed, particularly the La and the Iga, two feeders of the Angara; and, what was worse than half a score of such rivers, the Russian's axle was again at its mischief, giving way altogether, and detaining us four hours. We were now in the midst of a population, whose habits and manners rendered any little delay far more disagreeable than we had ever found it to be among the honest and civil peasantry of the Lena. Many of the settlers, in fact, were themselves convicts,

in whom a change of residence had not produced any essential change of character; and, in spite of all our caution and vigilance, several things were, last evening, stolen from our very carriage at Zeminsky. On the contrary, the native peasants, though generally the descendants of convicts, appeared to be remarkably steady and obliging. They were strong and compact; and, throughout the district, they were, as a body, the largest race of men that I had ever seen.

In one of the villages, a handsome church of wood, the work of a self-taught native of the neighbourhood, was nearly completed. Generally speaking, the places of worship were substantially built and neatly finished. Whether they were well filled, I had some reason to doubt, for every holiday, Sunday as well as Saturday, and Saturday as well Sunday, seemed to be celebrated by drunkenness. St. Nicholas, I suspect, is the only name in the calendar that has a dry day; and even St. Nicholas, as we have already seen, has the loss made up to him by having a wet festival to boot as well as his neighbours. Speaking of tippling, we last night met on the road that indispensable patron of patron saints, the wealthy distiller whose mansion we occupied in Irkutsk; and I was grieved that I had not an opportunity of personally returning my thanks to him for the kindness that I had experienced at the hands of his agents.

At noon, on the 18th, we reached the town of Nishney Udinsk, having travelled five hundred versts in sixty-five hours. Our friend ahead had provided quarters for us here, in case that we might feel disposed to remain a few hours; and I was met by the postmaster, the

commissary, and the other authorities, all in fall uniform; for, besides the verbal announcements of my importance, my passport gave me the title of "Governor," the highest rank known in Siberia. If such honours and ceremonies could have resulted in a comfortable room and a good dinner, I might have liked them better; but, as things were, I should have placed more of a hungry man's reliance on the smile and nod of "mine host" of the humblest alehouse—even of "The Pig and Whistle" itself—in merry England. On several occasions, I was disgusted with an obsequiousness, which, in my opinion, a sovereign could not accept without a feeling of degradation; I allude to the custom of bowing down and kissing the ground before people of distinction. One of those who thus saluted me was a Dutch beggar, who, as he did not appear to be really an object of charity, pocketed merely his labour for his pains. A similar slavishness of disposition was exhibited by a subordinate functionary in Irkutsk; but, among the serviles, I did not reckon my Yakut eaters, for, though they did kiss the ground, yet they had not bowed down for the purpose.

Nishney Udinsk was a straggling collection of wooden houses, containing a population of about eight hundred souls; and the neighbourhood was more hilly than anything that we had seen to the west of the Baikal. The principal inhabitant, the son of an exiled Jew, of the name of Priceman, was said to be worth two millions of roubles, partly made by his father, as a distiller, and partly by himself, as a general trader. From this merchant of the first guild, for such he was, we purchased some sugar, at three roubles a pound, and some fowls,

at threepence each. We had also the pleasure of seeing his daughter, celebrated, not only as the great beauty, but as the rich prize, of the little world of which Nishney Udinsk was the centre. I witnessed, by the by, a scene in the street, which would induce one to hope that Mademoiselle Priceman's lovers might adjust their respective claims without fighting about her. Two fellows had quarrelled about the wife of one of themselves, and were doing all the damage to each other that they could. To say that the combatants came to blows, would be an abuse of language, for they did nothing but pull and shake, push and jostle, scratch and tear; and I would rather have taken all that passed between the husband and the paramour, than the scolding which the lady fair, who was the subject of the controversy, addressed to her lord and master.

In consequence of almost constant rains for some time past, the roads were so heavy, that, next morning, we made only twenty-five versts before breakfast. This meal we took at Alzamoos, in the dwelling of a peasant, the station-house itself being under repair. Our host, however, did not remain to do the honours, having evacuated the premises, with his whole family, on our approach; and this proceeding he doubtless intended as a signal mark of respect and hospitality. A guitar, and some other articles of the kind, proved him to be a man of some education and taste; and he appeared to be in tolerable circumstances, for we found, in his cupboard, a little of the best nalifky that we had ever seen. We of course made ourselves at home, as, in the absence of inns, every traveller must do, in all parts of the country. But still, in spite of the extremely hospitable disposition

.

of the people, we could not, without a great sacrifice of time, have depended on them for food, being obliged, in this important department, to take care of ourselves, to pick up a fowl at one place, a loaf at another, and some eggs at a third, and to cook all at a fourth.

Not only are the peasants of Siberia remarkable for their civility, but all grades of society are decidedly more intelligent than the corresponding classes in any other part of the empire, and perhaps more so than in most parts of Europe. The system on which Siberia has been, and continues to be colonized, is admirable alike in theory and in practice. The perpetrators of heinous crimes are sent to the mines; those who have been banished for minor delinquencies are settled in villages or on farms; and political offenders, comprising soldiers, authors, and statesmen, are generally established by themselves in little knots, communicating to all around them a degree of refinement unknown in other half-civilized countries.

In the course of the afternoon, we crossed the Burassa, forming the boundary between the provinces of Irkutsk and Yenissei. Fortunately, however, we were still within General Rupert's jurisdiction, so that our police officer continued to go ahead, in order to provide for our comforts; and yet, notwithstanding this advantage in our favour, we soon discovered that Yenissei deserved its reputation of being the worst governed district in all Siberia. The country about the river is hilly and picturesque, and contains several gold washeries.

Our Russian again detained us two hours by the

breaking down of his vehicle, which, to tell the truth, was overloaded with all sorts and sizes of valuables.

On the 20th, we reached Kausk, standing on a river of the same name, and containing a population of three thousand souls. At the ferry, we were met by the mayor, the commissary, the hatman of Cossacks, and other officials. It was the most interesting place that we had seen to the west of Irkutsk, occupying a beautiful valley, surrounded by green hills, and possessing a woollen manufactory, besides some salt works. Still we remained only a couple of hours, being unwilling to lose time, more particularly as the improvement of the roads, in consequence of the undulating character of the surface, was enabling us to gallop over hill and dale at the rate of twelve versts.

The villages are very numerous, not only on the road, but as far back on either side as we could see; and the people all looked healthy, comfortable, and happy. In any place where the posthouse was out of repair, our police officer used to pounce on the best house for our use; and, as the owners would neither make any demand, nor accept any remuneration, we were generally obliged to compromise the matter by forcing a small gift on the host's wife or daughter. The dwelling in which we breakfasted to-day, was that of a person who had been sent to Siberia against his will. Finding that there was only one way of mending his condition, he worked hard, and behaved well. He had now a comfortably furnished house and a well cultivated farm, while a stout wife and plenty of servants bustled about the premises. His son had just arrived from Petersburg to visit his exiled father, and had the pleasure of

seeing him, amid all the comforts of life, reaping an abundant harvest, with one hundred and forty persons in his pay.

In fact, for the reforming of the criminal, in addition to the punishment of the crime, Siberia is undoubtedly the best penitentiary in the world. When not bad enough for the mines, each exile is provided with a lot of ground, a house, a horse, two cows, and agricultural implements, and also, for the first year, with provisions. For three years he pays no taxes whatever, and for the next ten only half of the full amount. To bring fear, as well as hope, to operate in his favour, he clearly understands that his very first slip will send him from his home and his family, to toil, as an outcast, in the mines. Thus does the government bestow an almost parental care on all the less atrocious criminals.

In the afternoon, after passing through a new settlement of exiles, called Borodino, we came in sight of the Siansky Mountains, celebrated for their singularly rich mines of gold and silver.

Next day, we entered Krasnoyarsk, the capital of the province of Yenissei, already mentioned in these pages as the place at which the Chancellor Von Resanoff, the lover of Donna Conception, of Santa Barbara, met his premature fate. We were, as usual, received with great civility by the municipal authorities, who came to meet us at the ferry on the Yenissei, and provided us with an excellent house. I called on the Governor, a civilian, of the name of Kapilloff, who very politely pressed me to dine with him the next day, being the anniversary of the Emperor's accession to the throne. I declined the honour, however, through my anxiety to get forward,

and begged for horses to continue our journey, as soon as ever our carriages should have undergone a few necessary repairs. I called also on the chief magistrate of police, who was very attentive, placing his carriage and four horses at my disposal; whilst with him, I happened to sneeze, when, according to etiquette, he bowed to me, and wished me good health.

We strolled through the town, finding little to interest us, excepting the tomb of Von Resanoff, erected in 1831, by the Russian American Company. There was the usual number of public buildings, all of wood, such as churches, hospitals, and barracks. Among the exiles in the place, there was one of high rank, Lieutenant-General Davidoff, banished for participating in some attempt or other at revolution. He was very comfortably, nay, happily, settled, with his whole family about him, sons-in-law, brother-in-law, and so on, and appeared to enjoy all the luxuries and elegancies of polished life. So far as the eye could judge, General Davidoff was no more an exile than Governor Kapilloff himself.

For our own immediate purpose of racing against time, we could hardly have come more inopportunately to Krasnoyarsk. Everybody was idler than his neighbour on the occasion of the consecration of a new church, by the Bishop of Zomsk, situated, rather ornamentally, I thought, than usefully, on the face of a hill, at the distance of a verst and a half from the nearest house. At the conclusion of the ceremony, the chairman of the building committee gave a grand entertainment to the Bishop, the Governor, and all the higher functionaries generally, the whole party, I understood, displaying as much zeal as if St. Nicholas's wet-day had brought them

together; and, in imitation of so good an example, the lower orders speedily filled the streets, and kept them filled, too, for the most of the night, with drunken males and females. I had heard that the men of Krasnoyarsk, on account of their size and strength, were frequently drafted into the Imperial Guards; but, whether it was that I was out of humour, by reason of the delay, or that they showed themselves under disadvantageous circumstances, I saw nothing particular to admire in them.

The town stands on the Yenissei, in a level plain, embosomed in hills, being said to derive its name from some neighbouring cliffs of red earth. It may be considered as the centre of the district where the mania for gold-washing, which broke out about fifteen years ago, has been carried to its greatest height—a mania which has brought not only agriculture, but even commerce, into comparative neglect and disrepute. Of the population, amounting to about six thousand, the great majority are more or less infected with the malady. As an instance of the speculative character of this occupation, one individual, who embarked in the business about three years ago, obtained no returns at all till this season, when he has been richly repaid for his outlay of a million and a half of roubles by one hundred and fifty poods of gold, worth thirty-seven thousand roubles each, or rather more than five millions and a half in all. Such a lucky hit as this serves, of course, to give a fresh impulse to the spirit of gambling, which animates both foreigners and natives alike. A Prussian botanist and physician, entirely wrapped up in the love of his favourite sciences, had actually started on a

pilgrimage to Kamschatka, for the sole purpose of examining the vegetation. When, however, he got as far as the golden district of Yenissei, he paused and pondered for a time in the fair town of Krasnoyarsk, till at length, as the bad luck of physic and botany would have it, he was chained to the spot in the double capacity of husband and gold-washer.

Speaking of marriage, a young lady's charms are here estimated by the weight, not of herself, but of her gold. A pood is a very good girl; and, according to Cocker, who appears to get the better of Cupid here as well as elsewhere, two or three poods are clearly twice or thrice as good as a wife.

At present, the mines and washeries are very unfavourable to the settlement and cultivation of Siberia, by calling away the labourers from more steady occupations to the precarious pursuit of the precious metals. Already has the effect been seriously felt in Krasnoyarsk, where a pood of meat has risen, in ten years, from a rouble and a half to twenty roubles, and where fowls, such as we bought at Nishney Udinsk for a quarter of a rouble a piece, cost three roubles a pair. When, however, these mining and washing operations shall have been reduced to a more regular system, they will afford an extensive market for the produce of the surrounding country, and thus, in the end, become the firmest support of the very agriculture which they now embarrass.

The province of Yenissei alone has this year yielded five hundred poods of gold. The most valuable washeries are those on the Tanguska, which falls into the river that gives name to the district, a considerable way to the north of Krasnoyarsk. The richest washing tract

in Eastern Siberia is said to be the triangle bounded by the Angara to the east, the Yenissei to the west, and Chinese Tartary to the south.

Expecting that we should start during the night, I laid myself down in the evening, as I had done ever since leaving Irkutsk, at the bottom of the carriage. In the morning, however, I found that I had slept without being rocked, for there we were still in Krasnoyarsk; and, notwithstanding my reiterated applications for horses, we were detained till ten in the morning in a place, of which hardly a single inhabitant, what between washeries and holidays, seemed capable of attending to any ordinary business. Almost everything, in fact, had gone wrong since we entered the province of Yenissei; and even our policeman was generally so far behind, that we had to wait for him at the stations.

We passed through a beautiful country for pasturage, well wooded and well settled. Soon after leaving the town, we overtook the principal chief of the Burats, on his way to visit the Emperor Nicholas. In face and general appearance he resembled an Indian of North America; he was, however, a man of education and address, and wore a handsome uniform. This potentate was attended by an interpreter.

In each town and village, by the by, along the great thoroughfare, there is an ostrog, with a sentry at the door. These wooden forts are used for locking up the convicts, while passing onward to their respective destinations. The convicts travel in parties of two or three hundred each, very lightly chained together, and escorted by soldiers; and, in order still further to prevent escape, sentinels are stationed at every three or four miles on

the road. Under all these circumstances, attempts at desertion are very rare, and scarcely ever succeed.

At Kasulskaya, which we reached at one next morning, we found the postmaster drunk and stupid. He not only would give us no horses himself, but endeavoured also to deter others from giving us any, alleging that he had received private instructions not to render us any assistance. Not contented with negative churlishness, the fellow insisted on removing the candle, which, by law, should be kept burning all night in every posthouse. A scuffle ensued between my ever-ready fellow-traveller and the worthy functionary, in which the former was likely to come off second best; but, feeling that, at least on this occasion, he had done nothing to merit a drubbing, I rescued him, candle and all, from the rascal's fury. In the course of an hour, we obtained cattle from some of the villagers, and took our departure.

Sixty versts of very bad roads brought us, at two in the afternoon, to Atchinsk, where we were provided by the authorities with a house, in which we took breakfast and dinner in one. Our landlady was a jolly, good-humoured, handsome dame, whose husband was away washing for gold, at the distance of a hundred versts. Under this agreeable and communicative lady's tuition, I should soon have picked up the Russian language.

The population of this town is about two thousand, while that of the surrounding villages is five times the amount. All this is the work of the last twenty years; and the rapid growth of the neighbourhood, almost rivalling the mushroom-like settlements of the United States, shows how successfully government is proceeding

in the colonization of Siberia. Many of the inhabitants, and even some of the principal merchants, are Jews. Though the soil in the vicinity is said to be very rich, yet here, as well as at Krasnoyarsk, the monotonous labours of the husbandman have been, in a great measure, superseded by the more attractive occupation of hunting up the precious metals.

Atchinsk stands on the Tchulim, a tributary of the Obe, which is here so tortuous in its course, that a circuit of six hundred versts, according to my information, may be avoided by a portage of twenty-five. It is the most westerly town, at least on this route, in this tiresome province; and, at the distance of seventeen versts beyond it, there stands a pillar to mark the boundary, not only between Yenissei and Tomsk, but also between Eastern and Western Siberia. The traveller, however, has but little reason for congratulating himself on the change. The farther that one advances to the westward, the more rapidly do the roads, the posthouses, and the horses degenerate. The same regulations, it is true, apply to the whole country, so that the entire difference lies not in the theory but in the practice. These regulations, drawn up by Catherine the Second, in her own handwriting, are a lasting memorial of the sagacity and vigilance of that illustrious sovereign.

About a hundred versts from Atchinsk, there are said to be some remains, in the shape of dilapidated tombs, of a race that had apparently made greater advances in civilization than any of the modern aborigines of Siberia. There is also a steppe about two hundred versts distant, on which the neighbouring Tartars have, from time immemorial, been accustomed to congregate

for the purpose of enjoying all sorts of athletic sports. On such occasions, they stake their women, horses, and other valuables; and, though the authorities often receive complaints of foul play from the losers, yet, for obvious reasons, they seldom interfere between the gamblers.

In the course of the day, a distance of three versts occupied several hours. The road was execrable, and the night dismal, dark, and wet. We repeatedly got off the right track; and when, at length, to our joy, we reached a posthouse at midnight, we found neither fire nor light, while the inmates, a man, two women, and a child, were all fast asleep on the same shakedown.

Next day, every thing seemed to become worse and worse, the roads abominable, the stages long, the country dreary, the stations comfortless, the delays constant, and the postmasters uncivil. Besides being poor and miserable in appearance, the people were said to be really bad, robberies and murders being so common, as to render travelling very unsafe in some parts of the district. At our first station of to-day we were detained two hours for want of horses; while the posthouse was a filthy hovel, with a draggle-tailed creature of a landlady. Besides breakfasting, we killed time, as well as we could, by entering into conversation with our draggle-tailed hostess, who proved to be an amusing gossip. Her husband had been "exiled," as she said, for being saucy to his master; or more probably, we thought, to his master's goods and chattels. She was very inquisitive about ourselves, taking me, at first, for a Turk turned Russian; next, guessing that I was a German; and, lastly, hitting on my country. Under

this lively lady's roof, we witnessed an instance of the strictness with which some of the travelling regulations were observed. The courier with the mail had lost his *podoroshnoya* at his last station ; and though, in most countries, the bags would have been a sufficient passport, yet the luckless fellow was here detained, till a certificate of his having once had a *podoroshnoya* could be procured.

In the course of the day we passed a number of small carts on four wheels, each drawn by two horses, and loaded with twenty poods of tea, on its long and weary way to Russia. Autumn had now commenced in right earnest, and the fall of the leaf was rapid. We had still before us, on this, the 5th of our English September, fully three-fourths of the distance from Irkutsk to St. Petersburg ; so that, if things did not mend, we had a fair chance of being overtaken by the early and sudden winter of this climate.

At the Kid, another tributary of the Obe, we spent three hours in crossing ; and cold, wet, sleepy, and unwell as I was, I thought this the most miserable portion of my whole journey. After crossing, we came to the ruins of Kyskal, a village of four hundred and fifty houses, which was consumed by fire on the morning of the preceding Easter Sunday. Several lives had been lost ; and many more would have been so, if the flames had burst forth a few hours earlier, when most of the inhabitants, according to time-hallowed custom, were helplessly drunk. We had great difficulty in obtaining shelter, till a young and pretty woman induced her drowsy husband to admit the starving and shivering

strangers; and we were not sorry to be detained in this snuggery, for want of horses, till daylight.

Our next two days were as uncomfortable as possible—weather and roads bad, nothing to eat but black bread and sour milk, and most vexatious delays at every station. On the second of these miserable marches, when we were within four miles of Tomsk, our Russian's rickety vehicle—a drag, in every sense of the word—again broke down; and as the peasants, from some scruple or other, would neither be coaxed nor bullied into taking it on, the owner was obliged to embark with us, amid some superstitious forebodings on our part as to the probable consequences. On reaching Tomsk, where there proved to be no posthouse, we repaired to the proper magistrate, who, after examining our *podroshnoya*, and finding all right, proceeded to billet us on some of the citizens. Our lot fell on a dismal house in the suburbs, of which the proprietor had gone to Tobolsk, leaving his young wife, a buxom enough damsel, in charge of an ancient duenna; and, in spite of the vigilance of her guardian, the fair mistress of the mansion peeped into the room, merely to ascertain, of course, whether Englishmen looked like other people.

The absence of my Russian fellow-traveller's wardrobe, by preventing us from calling on the Governor before the morrow, added upwards of half a day to the wrong side of that gentleman's account—a very vexatious entry in our travelling ledger at this advanced season of the year.

Between the events of the day, and a severe cold caught at the passage of the Kid, I went to bed in no

very good humour, though this was the first time, for fourteen nights, that I had doffed my clothes, or slept out of the carriage. I had no great reason, however, to congratulate myself on the change, for I scarcely closed an eye. I felt feverish; I missed my accustomed jolting; and, what was worse than every thing else, the good lady of the house, who was sleeping in an adjacent gallery, perhaps to enjoy the fresh air, or, perhaps, to watch the premises, kept sending forth, during the whole night, coughs, sneezes, and sighs, with various other noisy tokens of her whereabouts. I was glad to rise early, and perambulate the town, visiting the markets, where I found the butchers, like their brethren in England, dressed in blue frocks. Was the coincidence, I asked myself, the result of accident, or of imitation, or of some innate congeniality between the colour of the coat and the unctuousness of the occupation?

Tomsk stands on the Tom, and is a handsome and flourishing town, with wide streets. Though many of the buildings are of brick, yet nineteen-twentieths of the houses are merely log huts. On either side of the roads, which, in rainy weather, are so many rivers of mud, there are boarded paths for the accommodation of pedestrians. The population varies considerably in amount according to the season, being about eighteen thousand in summer, and twenty-four thousand in winter. The fluctuation is occasioned chiefly by the prevailing mania of the country; and as the birds of passage must contain far more than an average proportion of adults, the extent of the washing speculations, as compared with the other employments of the inhabitants, may be easily estimated. This fashionable

pursuit is a perfect lottery, in which a hundred become poorer for one that is made rich; while, with respect to the lower classes, even the most fortunate labourers seldom derive any other benefit from their earnings than a winter of idleness, vagabondism, and dissipation. Indeed, the washeries themselves, during the very season of work, have too often become dens of drunkenness and riot; so that the different governors have been obliged personally to visit the establishments lying in their respective provinces, in order to curb the turbulent and profligate conduct of the adventurers.

I found here various races of people collected together—Russians, Tartars, Jews, Poles, &c.; while, in proof of the spirit of toleration, Catholicism, Judaism, and Mohammedanism, had each its own places of worship, as freely and openly as the national establishment itself.

After breakfast we paid our respects to the Governor, a frank, plain, good-humoured old soldier, who gave us, at my request, a Cossack, to precede us as far as Omsk, the new capital of Western Siberia. General Tartarenoff talked much about our country, and particularly about the difficulty of acquiring our language, repeating to us over and over again, with great glee, his whole stock of English, a few words picked up from the free and easy vocabulary of a common sailor at Memel.

I met with a greater number of petty annoyances at Tomsk, than at any other place in Siberia. Our Tartar driver was so quarrelsome, as to require to be taken before a magistrate; horses could hardly be got for love or money; and, on crossing the river at our depar-

ture, the Charon had a grand dispute with us, in consequence of our resisting his attempts at imposition. Then our fare was poor and unwholesome, though our dinner did boast of three courses. First there came soup made of grits, cabbage, and water; secondly, bread and salted cucumber; thirdly, fresh cucumbers and pickled mushrooms, with bread and tea. In the kitchen, our servants had the first two courses the same as ourselves in the parlour; while, in lieu of the third course, they were regaled with plenty of nice sour milk. We had no reason, however, to complain of our hostess, for such was the ordinary diet of the middle classes.

Among the foreigners in Tomsk there was an albino, of English birth, of the name of Crawley. For a long time this white negro had exhibited himself for money not only throughout Europe, but also in various parts of Asiatic Russia, picking up, by the by, a huge wife at Vienna; and, after he had got as far as Tomsk, on his way to China, he emancipated himself from his caravan, in order to keep an eating-house and a billiard-room. I was sorry that I had not an opportunity of seeing him, and he was equally disappointed at not seeing me, inasmuch as he had met only one Englishman since he settled in Tomsk.

On leaving this city, we crossed the Tom, which was here about half a mile wide, leaving our Russian behind us, in order to have the repairs of his carriage completed; and, though the roads were good, yet we could not make much progress in the absence of that gentleman, who acted in the capacity of interpreter. We passed several settlements of the aborigines, as also one of their burying-grounds, in which each tomb was enclosed within

a small square of logs. These Tartars were a comely race, the men being above the ordinary stature, and the women chubby and mirthful; and such of the females as were of mixed blood might be said even to be beautiful.

Next day, having been overtaken by my Russian fellow-traveller about ten in the morning, we began to see more symptoms of life on the road, meeting the mail and several travellers; and, at the crossing of the Obe, we found a proof of the increasing intercourse in the existence of rival ferrymen, who, however, illustrated the proverb of the cooks and the broth, by detaining us with their squabbles. The weather had improved; and along the road there was much land under cultivation.

On the ensuing day, we entered the Barabinsky Steppe, a flat and fertile prairie of vast extent. Among the many agricultural settlements that studded this boundless plain, the one which most particularly attracted my attention was a colony of Jews absolutely turned farmers—a phenomenon the more extraordinary in a country where every one else was agog in pursuit of gold and silver. But the alteration of complexion was perhaps more remarkable than that of disposition. Though these tillers of the ground still retained their hereditary features, yet, in spite of the usual influence of rural labour, they had exchanged the swarthy countenance and dark locks of their race, for fair skins and light hair, which were very becoming in the women, with their heads swathed in a kind of red turbans. In the course of the forenoon, we had a curious remembrance of home in a large band of gipsies, whom we met at Elkul: in appearance and habits they were the

exact counterparts of their brethren and sisters in our own country.

On this our fourteenth day from Irkutsk, we reached Ubinskoi, said to mark one third part of the distance to St. Petersburg. We had just previously posted through the miserable little village of Kolyran, giving its name to one of the most valuable of the mining districts, and communicating, by a cross road, to the southwards, with Barnaul, the local *depôt* of all the precious metals of the surrounding regions. As the weather had been dry for some time, the roads were tolerable, notwithstanding the perfectly level character of the surface.

Next day at noon we reached Kainsk, standing on the Om. Though pretending to be a town, yet it was nothing but a straggling village of miserable houses, with a population, many of them Jews, of less than a thousand souls. We were still on the Barabinsky Steppe, which would, in fact, carry us two hundred *versts* farther to the western boundary of the province of Tomsk. In this immense plain, there are several extensive lakes. One of them, from which our yesterday's station of Ubinskoi takes its name, empties itself into the Om; but of the others, which all lie off the road, some are salt, and, of course, have no outlet.

As we arrived at noon on Sunday, the good folks of the town were just coming out of church, while their less scrupulous brethren and sisters of the adjacent villages were celebrating the day as usual by getting drunk—or rather by continuing drunk, for the Saturday had been the festival of John the Baptist. As a curious instance of the influence of custom, not merely on private individuals but also on public opinion, the bottle is quite

fashionable and orthodox on any and every holiday, excepting always St. Nicholas's dry turn, while the bath on these sacred occasions is shunned as one of the deadly sins. Knowing this, I was surprised to-day on seeing an old lady—with one foot in the grave, and another out of it,—openly emerge from a bath-house, reeking all over with the evidence of her impiety; but, on inquiry, I found that the apparent sinner, being an invalid, had made all right by procuring the requisite dispensation. What a blessing in point of comfort and cleanliness, if the priests could and would prevail on the people to accept the bath in place of the bottle!

Being preceded both by the Cossack, whom I had obtained from Governor Tartarenoff, and by an officer of police, we did not encounter any delays at the post-houses. But, after leaving Kainsk, I began to suspect that some extraordinary merit on our own part was one main cause of our getting forward so swimmingly, for the whole population of every village, whether by day or by night, flocked to see us, the males all uncovered, and the females incessantly bowing. The secret gradually oozed out, that our friends ahead, as much perhaps for their own convenience as for our glory, had insinuated that I was an ambassador from the Emperor of China to the Czar, while the simple peasants, according to the natural growth of all marvellous stories, had of their own accord pronounced me to be the Brother of the Sun and Moon himself, pushing on to the capital, along with my interpreter and one of my mandarins, in order to implore the assistance of the Russians against the English. Private accommodations were prepared for us at every station; and we were decidedly the greatest

men that had ever been seen to the east of the Uralian Mountains. As the roads were excellent, we enjoyed the joke, whirling along at the rate of twelve or fifteen versts an hour.

During the night, the officer of police left us at the boundary between the provinces of Tomsk and Omsk, so that we had now to depend on our Cossack alone. The farms of the villagers are not always near the villages, being sometimes as much as thirty versts distant. The peasants appear to be well off, and really are a happy and contented race. With respect to the young women, a custom was said to prevail which would be more honoured in the breach than in the observance. Such of them as remain single at their mother's death, are at the disposal of their nearest male relative, whether father, or brother, or uncle, or guardian, who may sell their first favours, in marriage or otherwise, for his own private emolument; and, in justice to all nearest male relatives, I ought to add, that the damsels don't seem to dislike the practice.

At a house, where we dined to-day on sour-kraut, an old man could not possibly conceive how we, being English, could be coming from the east, assuring me that all the Englishmen, who had ever visited Siberia, had not only come from the west, but had no other way to come. Knowing something of geography, our aged host explained to us that, besides the Polar Sea on the north and the Chinese frontier on the south, there was on the east a great ocean, which was certainly far from England, the western door alone, as it were, being left open to admit our countrymen.

In the course of the afternoon we entered Omsk, the

new metropolis of Western Siberia. It stands, at the confluence of the Om and the Irtysh, in the midst of a sandy plain, which presents no tree of larger size than a dwarf willow. Over this barren flat, which extends on all sides as far as the eye can reach, the biting winds blow from every quarter of the compass without impediment, driving before them in winter drifts of snow, and in summer clouds of dust, both of them equally pernicious to the eyes. The town is still in its infancy, having but lately supplanted Tobolsk; but already the public buildings are handsome, while the fortifications, where the two rivers do not afford protection, are formidable. It has been selected as the seat of the general government, chiefly with a view to the gradual subjugation of the Kirghiz, who occupy a vast breadth of country all the way from this to the Caspian Sea; and the advance of Russia in this direction, besides being peculiarly important both commercially and politically, is the more an object of ambition on this account, that, along all the rest of the southern frontier of Siberia, the jealousy, if not the power, of China forbids the acquisition of new territory. Besides a population of five or six thousand, there is a garrison of four thousand men; and, in fact, the place may be considered merely as a military post, for nearly all the inhabitants derive their subsistence from the presence of the troops. As to civil government, Omsk still depends on the ancient city of Tobolsk, which continues to be the capital of the united provinces of Tobolsk and Omsk.

We were hospitably received into the house of Count Tolstoy, a clever, cheerful, plain man. He had recently returned from St. Petersburg, whither he had escorted

the Khan of Tashkand, lying in about 43° north latitude and 70° east longitude, on a visit to the Emperor. The chief in question may already be reckoned among the vassals of Russia; and, at no distant day, his territories will form an integral part of this colossal empire.

Next morning, after breakfast, the Governor-General sent his carriage and four to convey me to his residence. Prince Gortchakoff, a middle-aged man of pleasing manners and address, received me kindly, expressing his regret that, according to arrangements made along the whole route, he was unavoidably obliged to start that afternoon in order to inspect the south-western boundary of his government, — the most interesting section, as already mentioned, of the southern frontier of Siberia. He assured me, however, that he had done all in his power to facilitate my movements, having despatched orders to have horses in readiness for me at every station; and he had very naturally assumed that, instead of taking the straight cut to Tiumen, any traveller would prefer making the circuit by Tobolsk, with its classical associations and historical renown.

I spent the greater part of the day in visiting the public buildings. The establishment in which I felt most interested was the military school for the sons of soldiers. The number of pupils was two hundred and fifty, the expense of maintenance being estimated at twelve kopecks, or about five farthings, a day each. Besides reading, writing, drawing, geography, gunnery, &c., they are instructed in many of the native languages of the neighbourhood, such as Mongol and Kirghiz; and such of them as evince any peculiar aptitude in this way, are taught Persian, Arabic, and other oriental

tongues. They are thus qualified to act as interpreters throughout Central and Southern Asia, receiving, in short, such an education as fits them at once to promote the ambition and to share in the destiny of their country. The boys acquire also several useful trades, architecture, gun-making, working in metals, &c. They are all intended for the army, entering as privates, but rising, in cases of merit, to the rank of officers.

In the hospital, some of the patients were suffering so severely from military punishment, that they were actually delirious. These wretches had probably been doomed to expire by inches to please the mistaken scruples of the law as to putting criminals to death at once—a very extraordinary mode, truly, of reconciling justice and humanity. The only important manufactory in Omsk was one recently established in order to provide the military with clothing.

The country about Omsk abounds in game of various descriptions; and to the south there are wild horses, which, though of a small breed, are fleet, compact, and beautiful.

About seven in the evening of the 1st of September, precisely seventeen days after starting from Irkutsk, we resumed our journey by crossing the Irtysh, leaving our Russian behind us till his most unfortunate carriage should be fitted with its third pair of new wheels. The banks of the river presented many villages and farms. The country on the Upper Irtysh is said to be one of the finest districts for agriculture in all Siberia; and it was there that the Emperor Paul was anxious to establish a colony of Scotch farmers—a project which, if carried into effect, could not have failed to set a useful example

of skill, industry, and economy, to the settlers of this vast region. Speaking of agriculture in its widest sense, Barnaul is said to be the only place in Siberia where apples have hitherto been known to thrive; and melons and cucumbers grow abundantly everywhere, the latter more particularly being to be seen in the gardens, in the windows, in the galleries, and even in the rooms.

The distance from Omsk to Tobolsk occupied us three nights and two days. The country was flat and uninteresting to the last degree, though more closely settled than any other part of Siberia that we had seen. There was a constant succession of Tartar, Kirghiz, and Russian villages, while roads were branching off on either hand to more distant settlements. This was owing mainly to the fact, that the neighbourhood—the nucleus, as it were, of Siberia—had been so long cultivated, for the soil, clay in the open country, and sand in the woods, was generally poor.

Our Russian did not overtake us till we had waited six hours for him at one station; and he almost immediately detained us for three hours more by striking about ten versts off the road to visit a clergyman and his wife, who, after all, did not recognise him. He next fell sick and grew very fidgety about his safety. Lastly, in order to make up for lost time at the expense of his driver and cattle, he spurred on the former with a thick pipe-stem, till one of the latter fell down dead. Such coercion appeared to me to be as unnecessary as it was cruel, for never did I see such driving out of England.

At one of the villages we saw a very remarkable dwarf. He was about forty years of age, thick-set, with a large head, and barely two feet and a half high. For

his inches, however, he was a person of great importance, being the wise man of the place, and the grand arbiter in all disputes, whether of love or of business. We also met two parties of convicts. Each party consisted of seventy or eighty fellows, chained together in sixes or so, by light handcuffs, and escorted by ten or twelve Cossacks.

After leaving Omsk, I was mortified to learn that there resided there an English lady, whom I had not seen. Her husband, a physician, called on me, but missed me; and I did not hear of his visit, till after I had started. The weather was now telling plainly of the approach of winter. There was a good deal of snow, and the nights were frosty. These symptoms were any thing but pleasant, inasmuch as we had not yet accomplished the half of our journey.

On the 4th of September, just as the sun was rising, we entered the fine old city of Tobolsk, the most interesting point in Siberian story ever since the days of the chivalrous Yermac.

CHAPTER XX.

FROM TOBOLSK TO LONDON.

Retrospect of Russian History—Yermac, his victories and death—Establishment of Russian power in Siberia—Tobolsk—Exiles—Tiumen, Mayor's dinner—Province of Perm—Kamishloff, doctors differ—Fair of Irbit—Condition of peasants—Ekaterineburg, mines—Value of Siberia to Russia, fur-trade, Chinese trade, ivory-trade, mines and washeries, geographical position, moral and political amelioration—Height of land—Kama—Countess Strogonoff—Charlish and obsequious postmaster—Kungur—Russians not Asiatics—Perm—Inland navigation—Countess Strogonoff—Courtesy and honesty—Province of Viatka—Armed foot-pads—Mookikikea—Merchants from Fair of Nishney Novgorod—Borlacki—Kasan, past and present—Volga—Forests of oak—Disturbances among peasants—Delays at posthouses, and artifices of postmasters—Nishney Novgorod—Troubles of a pair of dancers—Sheremetieff's estates and peasants—Vladimir—Uses of a pipe-stem—Symptoms of vicinity of metropolis—Moscow—Vishney Volotchok—Valdai—Novgorod the Great—Military settlers—St. Petersburg—Voyage to London.

The latter half of the sixteenth century was one of the most glorious periods in the Russian annals.

To recapitulate a little : Russia, after having been broken down, like many other States of Europe, into various principalities practically independent of each other, fell an easy prey to a son of Zinghis Khan, in 1223. This double evil of internal disunion and foreign domination, though by no means constant either in form or in intensity, continued to prevail for about two hundred and fifty years. But John Basiloritz the Third,

who occupied the throne from 1462 to 1505, entirely changed the aspect of affairs before the middle of his long reign. He speedily resumed all the detached fiefs, so to speak, of the Grand Duchy of Moscow, subduing, in 1471, even the republic of the Great Novgorod, which neither Russian nor Tartar had ever previously reduced to anything more than a merely nominal subjection; and, by 1481, he not only threw off the yoke of the Khans of Kipzac, but dashed their empire into fragments, subsequently disposing more than once of the dominion of the metropolitan city of Kazan, of which he had been born a vassal. Moreover, the very disasters, which elsewhere befel Christianity, tended to elevate Muscovy, at this same time, into a still higher position. The capture of Constantinople, as already mentioned under the head of Sitka, invested the Grand Duke, in matters of religion, with the diadem of the Cæsars, virtually extending the power which the first Czar, as just stated, had established and consolidated at home, into every country that contained adherents of the Eastern Church.

After the lapse of more than fifty years, the seed which was thus sown yielded its first fruits. In 1552, John Basioloritz the Fourth, grandson of the first Czar, captured Kazan; and, in 1554, he annexed Astrachan also to his empire; and, at the very time that the Volga and the Caspian were thus made ready to connect Russia with Persia and Bokhara, the White Sea was opened, by the enterprise of a gallant countryman of our own, so as to bring her into direct and immediate contact with England. Of the fragments of Kipzac, there now remained only the two principalities of Crimea

and Siberia. To say nothing more of the Crimea than that it was, for two centuries, saved by Turkey from the clutches of the growing giant of the north, the conqueror of Kazan and Astrachan almost immediately carried his avenging arms beyond the Uralian Mountains, assuming to himself, in 1558, the title of Lord of the Siberian Lands. His conquests, however, were not of a permanent character. His troops, after defeating a chief of the name of Yediger, had imposed on him an annual tribute of a thousand sables; but soon afterwards this vassal of the Czar was subdued by Kutchum Khan, who, as a lineal descendant of the terrible Zinghis, thus again placed Muscovy in collision with the line of her original oppressor.

In this state of affairs, the grand question, whether barbarism or civilization, Mohammedanism or Christianity, was to rule the destinies of Northern Asia, was decided by a homeless robber. The trade, which the Russians had recently begun to conduct with Bokhara and Persia, was so frequently and extensively interrupted and plundered by the Cossacks of the Don, that the Czar, sending a large force against the banditti in question, defeated and dispersed them. Among the fugitives was Yermac Timofeeff, who might almost be said, by his subsequent invasion of Siberia, to have given a new world to his sovereign.

With six or seven thousand followers, Yermac fled towards the north, till he reached the confluence of the Kama and the Tchiusova. He there took refuge in the infant settlements of Maxim Strogonoff, exhibiting throughout a highly creditable degree of moderation, while, finding himself in the neighbourhood of Siberia,

he was naturally led to contemplate the conquest of that country. In addition to a sense of his own danger in remaining within the reach of his incensed master, Yermac had a still more definite motive in the reasonable hope of complete success.

Kutchum Khan, to say nothing of the hostility of rival princes and independent tribes, was unpopular even in his own dominions, for, besides having acquired many of his subjects by the odious title of conquest, he had exasperated the great mass of the aborigines by attempting to dragoon them into the Mohammedan faith. Again, Yermac's Cossacks were as formidable as Kutchum Khan was feeble. These outlawed desperadoes would feel, at every step of their advance, that there was no retreat for those who had a worse enemy behind them than before them; while their powers of endurance and their almost amphibious habits would enable them to go as far as either their hopes or their fears might urge them. Lastly, Maxim Strogonoff was ready, for more reasons than one, to forward the expedition by all the means at his command. He had obviously a strong interest in getting rid of his dangerous and expensive guests; he had, farther, his own wrongs to avenge; for Kutchum Khan had not only himself attacked his newly formed establishments, but had also encouraged others to do so; and, over and above those two grounds of interference, he was desirous of extending the trade with Siberia—the trade, by the by, for the opening of which his grandfather had received a grant of the very lands which he himself now occupied.

Under the influence of all these auspicious circumstances, Yermac set out, in the summer of 1578, along

the banks of the Tehinsova. But, through his ignorance of the country and the neglect of such precautions as experience alone could suggest, he was overtaken by the winter before he could achieve anything of importance ; and, at the commencement of spring, he was obliged, by the want of provisions, to return to his old quarters. But this disappointment, which merely rendered Yermac more prudent, without shaking his resolution, had a very different effect on Strogonoff, who began to think that the enterprise might cost more than it was worth—the two feelings being equally natural, respectively in the thrifty merchant and the proscribed freebooter. Yermac accordingly needed threats to obtain from Strogonoff his second stock of supplies, more particularly as, from the very necessity of the case, it was to be considerably larger and more costly than the first. Besides an increased quantity of food, the Cossacks, on this occasion, were provided, for the first time, with muskets and ammunition, while, to complete the appearance of regular troops, these lawless marauders received colours that were decorated with the images of saints.

In June, 1579, Yermac started anew, with an army now reduced to five thousand men. By reason, however, of the ruggedness of the roads, and the difficulties of the navigation, he reached Tchingii, on the Tura, only towards the close of 1580. By this time, through fatigue and sickness, and repeated skirmishes with the Tartars, his five thousand had dwindled away to fifteen hundred ; and yet neither did leader nor follower hesitate a moment in advancing against Kutchum Khan. The march of this little band of heroes was one series of battles and victories, so that only one-third of them

lived to see their great enemy encamped, near the centre of his dominions, at the junction of the Irtysh and the Solol, with vastly superior numbers. Undismayed, either by the loss of their comrades, or by the array of the thousands that waited to receive them, the Cossacks began and ended this one contest more, between Europe and Asia, with a spirit worthy of Marathon. After an obstinate struggle, the Tartars were routed with fearful carnage, while Kutchum Khan himself was almost taken prisoner.

But the sequel showed, more clearly than the past, that this illustrious robber was equal to his fortune. From the very field of victory, he despatched part of his still more seriously diminished forces to storm, if necessary, the fortress of Sibir, the residence of the vanquished potentate. But this detachment found the place deserted; and soon afterwards, Yermac, entering in triumph, seated himself on the throne of the Valleys of the Tobol and the Irtysh. Through the influence of moral causes, his very weakness proved to be his strength. Struck with the matchless intrepidity and marvellous exploits of the handful of strangers, the neighbouring Tartars flocked from all quarters to welcome their new sovereign, submitting to his authority without hesitation, and acquiescing in the payment of the usual tribute; and even distant princes, as they heard in succession of his renown, came, as vassals, to claim his protection.

But, as many of the Tartars still retained an affection for their exiled monarch, which they were too ready to display in turbulence and insurrection, Yermac felt the precariousness of his present grandeur, and he resolved to offer his new acquisitions to his former

master, on condition of receiving forgiveness and support. One of his most faithful followers was accordingly sent to Moscow, taking with him, as an escort, fifty Cossacks, whom Yermac could but ill spare. In addition to the most plausible history of the past and the fairest promises for the future, the envoy carried to the Czar a present of the choicest and most valuable furs. This ambassador, after being treated at Moscow with the highest distinction, was sent back to Sibir with a sum of money and an assurance of speedy and effectual assistance, carrying at the same time ample presents for all concerned, and for Yermac, in particular, a fur robe which the Czar himself had worn.

Meanwhile, Yermac not only maintained his conquests, but even extended them: he not only baffled all Kutchum Khan's attempts to recover his crown, but even penetrated into the valley of the Obe, above its junction with the Irtish. Reinforced at length by five hundred Russians, he continued his excursions on all sides with more activity than ever, crushing every chief that might be imprudent enough to assert his independence. In returning from one of these expeditions, he had encamped in the evening on a small island, formed by two branches of the Irtish. The night was dark and rainy, and the troops, who were fatigued with a long march, relied too implicitly for safety on the state of the weather and the strength of their position. Apprised by his scouts of the circumstances, Kutchum Khan silently forded the river with a chosen band, coming so unexpectedly on his sleeping victims as to preclude the use of their arms. The Russians, to the number of three hundred, were cut to pieces almost without re-

sistance; and only one man escaped to carry the news of the catastrophe to the garrison of Sibir. Even in this awful hour of confusion and slaughter, Yermac's intrepidity never forsook him. After many acts of heroism, he cut his way through the enemy to the water's edge; and he would most probably have escaped from Kutchum Khan and all his Tartars, if he had not, while attempting to get into a boat, fallen into the river and sunk instantly to the bottom.

By order of Kutchum Khan, the hero's corpse was exposed to all the insults which revenge could suggest to that sullen barbarian. But, after the first transports of rage had subsided, the Khan's followers testified the most pointed indignation at the ungenerous ferocity of their leader; and, suddenly passing from one extreme to another, they reproached both him and themselves for having offered any indignity to such venerable remains. They proceeded even to consecrate Yermac's memory, interring his body with all the rites of their superstitions, and presenting sacrifices to his manes. In a word, they regarded their conqueror as a god, investing his body, his clothes, his arms, and his tomb, with miraculous powers and properties. With Yermac expired for a time the Russian empire in Siberia, for, on the news of his death, the garrison of Sibir evacuated the country, feeling, however, that, at no distant day, the reputation of the dead warrior would be a more powerful instrument of conquest than ever his living energy had been.

Though Kutchum Khan regained a small portion of his original dominions, yet his triumph, such as it was, was but brief. The Russians soon returned to their

prey. Their first permanent establishment was Tiumen; and, before the year 1587 had passed away, they had founded Tobolsk as nearly as possible on the field of the first and greatest battle between Kutchum and Yermac.

On entering the ancient metropolis of Siberia, we found that we had travelled so fast as to outstrip the courier, who had left Omsk the day before ourselves to warn the authorities of our approach; and we were, therefore, obliged to take shelter in a miserable sort of a hotel kept by a Jew. Soon afterwards, however, the magistrate of police and the master of the gymnasium called to offer us the use of the house of the latter; and, by way of apology for having had no quarters ready for our reception, they explained that, though they had heard three months previously of the expected visit of a General Simpson, yet they had not recently received any definite information as to my movements.

The situation of the city is admirable. On two sides is the Irtysh, while on the third side is some high table-land, on which are several public buildings. These heights are fortified; and a monument to Yermac, bearing on its opposite faces 1581 and 1584, the respective dates of his victory and his death, occupies a commanding position—a memorial which, unless meant merely to mark the locality of his noblest triumph, rather detracts from the fame of one whose real monument is Siberia, in all its length and breadth, whose true epitaph is the history of the onward career of himself and his tribe for upwards of a hundred and twenty years. Though the streets were well laid out with boarded footpaths, yet the buildings presented a melancholy spectacle of dila-

pidation and decay ; and the population and trade of the place were said to be both rapidly diminishing. All this was chiefly the consequence of the removal of the general government of Western Siberia from Tobolsk to Omsk ; but, as the change had been the work of Prince Gortschakoff, the present incumbent, the good folks of the forsaken capital flattered themselves with the hope that, according to immemorial custom, the next Governor-General would be eager to undo all the acts of his predecessor. But Tobolsk had been set aside as well commercially as politically. Till lately, it was the grand halting-place between Russia and China ; but now nearly all the caravans were passing straight between Tara, on the Irtysh, and Tiumen, on the Tura.

The Governor of the united provinces of Omsk and Tobolsk was at present absent, having, in fact, been lying sick at the new capital when we left it. A considerable part of the civil business appeared to be connected with the exiles, for whom the city was said to be a sort of entrepôt. Here these people, of whom about three hundred on an average arrive every week, are distributed into different bands, the more atrocious criminals being despatched in irons to the mines, the convicts for lesser delinquencies being drafted into the agricultural districts, and the political offenders being sent to the settlements, which are specially set apart for their use. About a sixth part of those who come as far as Tobolsk are pardoned, and, in course of time, find their way back to their homes. Criminals of rank or wealth, when condemned to the mines for other than political offences, generally contrive, for a consideration, to get themselves constantly reported "sick and off duty."

Hearing that there was an Englishman in Tobolsk of the name of Halliday, I sent for him soon after my arrival; and he appeared to be well pleased to see one of his countrymen, having previously met, in the course of four years, only two persons who could speak our language. Though English on both sides, yet he was a Russian subject, for his parents, at the time of his birth, resided in St. Petersburg. He had been principal clerk to an English merchant in his native city; but, having been detected in extensive forgeries, he was, about six years ago, quietly despatched to Siberia in irons. He was now keeping a shop; but, as this did not answer his expectations, he was intending to try his fortune at Tomsk as a gold-hunter. According to Halliday, trade, for various reasons, was on a very precarious footing in Tobolsk. There was the trickery of the Jews, who formed a considerable majority of the dealers, though fortunately the government, finding the complaints on the subject to be perpetual and universal, had recently adopted the custom of sending all new importations of Hebrews beyond the Baikal. Then there was the diminution of demand in consequence of Prince Gortschakoff's preference of Omsk. Lastly, there were the bad memories of most people in office, who could hardly ever be induced by fair means to pay their accounts; and, if the creditor should enforce the law for attaching one-third of a debtor's official income till his claim was satisfied, he generally lost more than the amount at issue by getting into bad odour with all sorts of people, in a country where the meanest servant of the government was a great man.

As there are no manufactories in Tobolsk, every thing

but provisions is very expensive; and even provisions are not so cheap as in many other places, wheat flour being four roubles a pood, beef six, and rye flour one rouble — keeping in view that three roubles and a half for forty Russian pounds are, as nearly as possible, a penny for one English pound.

Again crossing the Irtysh above its junction with the Tobol, we next day reached Tiumen on the Tura, the first hundred and eighty versts of the intermediate distance having been accomplished in fifteen hours, including stoppages at every twenty or thirty versts. Though our *podoroshnoya* allowed only three horses for our own carriage, yet, according to the state of the roads, we had four, or five, or even six, without any additional charge — a facility for which we were, I believe, mainly indebted to the mere presence of our Cossack. Nor was the cost of living heavier than that of posting, a breakfast or a dinner for our three selves and our two servants being only about two roubles and a half.

* Before reaching Tiumen, we met a large body of exiles, with an escort of twenty or thirty soldiers, and soon afterwards a party of female convicts. These bands usually travel by night, and are confined in the *ostrogs* during the day. This custom, which seems so favourable to any attempt at escape or rescue, may have arisen from a desire of sparing the feelings of these unfortunates, or, what is more probable, from a wish to avoid the heat of the sun.

Tiumen, which, as already mentioned, is the most ancient settlement in Siberia, is curiously built on both banks of the Tura, the one being low and the

other lofty ; so that one half of the town towers over the other, the place, in this respect, bearing a considerable resemblance to Tobolsk. The two divisions are united by a floating bridge. After crossing by it from the lower town to the upper, we were met by a party of Cossacks, who assisted our carriage up the steep bank ; and at the top the serjeant ordered the driver to proceed at once to the palace, as the mayor's house was styled, from the circumstance that the Grand Duke Michael had twice slept in it, commanding, at the same time, the people in the market-place to make way for a great man.

At the palace, we were received by the head of the police, who introduced us to our intended host, a plain, long-bearded, swaddle-coated merchant of high standing. But our civic friend had something better in store for us than all this show and ceremony ; for, within an hour and a half after our arrival, we sat down to one of the most splendid entertainments that I saw in Siberia. If the Mayor of Irkutsk gave us our best dinner, certainly our second best was that of his brother of Tiumen. To do us the greater honour, our host himself, instead of sitting at table, acted as head waiter. He was very agreeable and communicative, and asked many questions about England, knowing just as much with regard to our country, as most of our countrymen know with regard to Tiumen. His mixture of curiosity and simplicity, though the most natural thing in the world, was yet very amusing. Tiumen, however, did not appear to be so much out of the way, after all ; for one of its live natives, a merchant's clerk in St. Petersburg,

was then in London. Our host himself had just returned from Perm, whither he had gone, in order that his wife, an invalid, might benefit by the warm springs.

It was most probable to the Chinese trade that we were indebted for the municipal hospitalities, as well of Tiumen as of Irkutsk. Independently of sending its own manufactures, to the value of about two hundred and twenty thousand roubles, to Kiachta, Tiumen is the grand depôt of all the goods that pass in either direction between Russia and China, being the point at which all the eastern routes, whether by land or by water, may be said, according to circumstances, to separate or to meet. This thriving town carries on also a large trade with Bokhara and the Kirghiz, chiefly in what is known with us as Russia leather; and, in addition to considerable quantities of this same staple manufacture, it sends a good deal of bristles and tallow across the Uralian Mountains into Russia, ultimately, perhaps, to find their way to England. It is, moreover, famous for its rugs and carpets, having sent such articles to Kiachta in 1837 to the value of five thousand roubles. They are often made at home by the peasant girls, who hawk them through the town at so many roubles a length, meaning the length of the fair manufacturer herself; and, as the women of the place and neighbourhood are justly celebrated for their beauty, this mode of taking each young lady's measure must, of course, recommend her wares to every man of gallantry and taste. In short, Tiumen is the only place in Siberia — excepting, perhaps, what Tobolsk may have

been in the days of its glory—that at all comes up to our English idea of a snug, pleasant, and prosperous town.

The population amounts to ten or twelve thousand souls. The streets are regularly laid out with many churches, and other buildings, of handsome appearance; but a fire, which lately occurred, consumed two hundred and eighty-five houses, burning out, among the rest, the Russian American Company's agent, who had filled his office, and perhaps occupied his residence, for fully half a century. We left Tiumen in the evening, highly pleased with everything and everybody that we had seen. In the night, however, we lost five hours, in consequence of a second attempt at arson on the part of my Russian fellow-traveller's most perverse axle, though not more perverse, after all, than the rest of his equipage.

By morning, we found ourselves in the province of Perm, reckoned part of Russia, as distinguished from Siberia; but, though we had thus passed the political frontier, yet we still had the natural boundary between Europe and Asia, the Uralian Mountains, before us. We had no immediate reason, however, to congratulate ourselves on the change, for, at the little town of Kamishloff, the very first station in Russia, the post-house was so filthy and wretched as to drive us into a peasant's hut for refuge. As a curious instance of the extent to which a traveller's feelings influence his opinions, I set down this village as "miserable" in the first draft of my journal; while Captain Cochrane, who had here "received the kindest attentions," lauded it as "pretty." In these cases, the truth probably lies

between the two extremes; and the reader may, therefore, believe on the united authorities of my gallant predecessor and myself, that Kamishloff is a “pretty miserable” place. About sixty or seventy versts, by the by, to the north of this station stands Irbit, so famous for its fair, on a river of the same name flowing into the Tura above Tiumen. The fair in question is one of the great marts for the manufactures of this last-mentioned town; and it is also the source whence Tobolsk draws most of its extraneous supplies.

The weather grew colder and more disagreeable. The peasants were gathering in their harvests, as if it was the depth of winter, dressed in their sheep-skins. They were a well-grown race—a fact the more extraordinary, inasmuch as, according to our information, they had not been reared in the most orthodox style. Instead of being suckled by their mothers, the children of this neighbourhood were said to be fed with cow’s milk from a small horn, having its tip covered with a cow’s teat; and very young infants would learn to hold the horn themselves, and guzzle away in their cradles.

At six in the morning, being the 7th of September, we reached Ekaterineburg, the centre of the mining district of the Uralian Mountains. This town stands on the small river Isett; and, with the usual proportion of churches and other public edifices, it has a population of about fourteen thousand, who are nearly all connected with the mines. It has an iron-foundry, a mint for coining copper and silver, and various establishments for cutting and polishing marble, porphyry, and precious stones. The neighbouring mountains appear

to be Nature's richest repository of minerals, yielding, in great abundance, diamonds, amethysts, topazes, emeralds, rubies, sapphires, jasper, porphyry, malachite, gold, silver, iron, copper, platinum, &c. These inexhaustible treasures chiefly belong to Count Demidoff and M. Yakovleff. The former, in particular, who is married to a daughter of Jerome Bonaparte, is supposed to derive about half a million sterling a year from his share of the spoil.

General Glinka, the superintendent of the mining district, kindly offered to accompany us to one of the gold mines, a courtesy which I was obliged to decline; for, besides being anxious to proceed onward, I was laid up, during my stay of two days in Ekaterineburg, with a very severe cold. I was still more sorry to be prevented by this indisposition from calling on an English lady, the wife of an architect in the place. I had, however, the satisfaction of taking charge of her letters for home.

I purchased some vases of cut crystal, for which the workmen of Ekaterineburg are unrivalled. In fact, I afterwards learned from an English jeweller that nothing of the kind could be finished in the same beautiful manner in London. Here also I met the only shopkeeper on the principle of "one price asked," that I had seen in Siberia. In general, a dealer asks about a third, or perhaps a half more than what he is willing to take; but this unique merchant had fixed and moderate prices for every thing. He was a seceder from the Lutheran Church, and sold nothing but goods, chiefly cottons, manufactured at the flourishing settlement of Saratoo, on the Volga, by Germans of his own sect.

Before crossing the height of land, from which Yermac first beheld the vast heritage which he was to win for his tribe and his sovereign, let me indulge in a brief consideration of the advantages that Russia has derived from Siberia.

Of all these advantages, the most obvious, as well as the most ancient, is the fur-trade, the pervading thread, as already mentioned under the head of Sitka, both of national policy and of national commerce, from the days of Ruric. It was, in fact, this branch of traffic that primarily gave the Muscovites any footing in Northern Asia. Anika Strogonoff, grandfather of Yermac's ally, had established himself at Solvytshegodskaya, a town in the government of Vologda, for the purpose of making salt. He soon, however, found metal more attractive in his intercourse with the inhabitants of the north-western parts of Siberia, receiving from them large quantities of the choicest furs in exchange for toys, and other commodities of trifling value. It was in consequence of his success—a success rewarded, as elsewhere stated, by the gift of an immense tract of land on the Kama and the Tchiusova—that John Basiloritz the Fourth, being the second czar of the name, sent across the Uralian Mountains the expedition aforesaid, which resulted in imposing an annual tribute of a thousand sables on one of the neighbouring chiefs.

In their new settlements, which were far more favourably situated, in that respect, than Solvytshegodskaya, the Strogonoffs prosecuted the fur-trade more vigorously than ever; and it was, in a great measure, through the profits of this same business, that Yermac was provided with the means of effecting a more exten-

sive and permanent conquest of Siberia than what his master had even attempted. In all subsequent times, a similar cause, combined, of course, with a love of glory and a thirst of dominion, urged the Cossacks onward, step by step, far beyond the remotest bounds of Asia, skins of some kind or other being, almost exclusively, at once the badge of subjection and the reward of victory.

Though latterly the fur-trade, through the gradual growth of other interests, has lost something of its relative importance, yet it is still the most valuable branch of Siberian, if not of Russian commerce. Native furs, to the value of seven millions and a half of roubles, have already been seen to be annually bartered at Kiachta, over and above all the skins that find their way to the westward, as far as Nishney Novgorod and Moscow. Though, with respect to this grand department of the traffic, I have not access to any definite statement, yet I have sufficient reason, in a general way, for knowing that it must be considerable, for to this extent the official returns even of the Chinese trade afford, in an authentic form, an indirect proof of tolerably conclusive character.

Of sables there were sold at Kiachta only 467, while at the same time there were 42,895 paws of the animal, the produce of at least 10,723; so that, even if not one whole sable went to the westward, there would still remain about twenty-two times as many skins for Russia as for China. But the Chinese share of the sables was nearly as inferior to the Russian in value as in number. The 467, which fell to the lot of the Celestials, were estimated, with all the expenses of transport on their backs, at only 7,480 roubles, thus

averaging something less than 16 roubles a piece; while, even at Olekminsk, the average price, as already mentioned, of the sables of the Olekma, taking two successive years together, was 2000 roubles for 40, or precisely 50 roubles a skin. Again, not a single marten was offered at Kiachta; while 14,794 paws proved that at least 3,698 skins of the animal must have been procured. Farther, there were only 9,010 stoats, but 42,515 tails of the creature, leaving at least 33,505 skins for other destinations. Lastly, of foxes, there were barely 200,000, with about 600,000 paws; so that on the really natural and probable supposition that the skins, properly so called, had not themselves been mutilated for the purpose, there would result, at least, 150,000 foxes more, that must have been reserved for the more westerly markets.

Of the enormous quantities of furs which thus go to Russia and to China, a considerable portion doubtless comes from the new world, a portion which, however, is by no means irrelevant to my argument, considering that, in the actual progress of discovery, Russian America is virtually a continuation of Siberia. Siberia itself is certainly less productive than it once was, partly because the fur-trade necessarily disappears before an agricultural population, and partly because it naturally tends, at least under the influence of competition, to exhaust itself. Even now, however, furs are still an object of pursuit throughout the whole country in general, for in my official returns of the Chinese trade there appear the squirrels of the Yenissei and the Obe, with the ermines of the river Ishim and the Barabinsky Steppe.

These ermines, by the by, contradict the general rule, that the furs to the east of the Lena are superior in quality to such as are found to the west of that river, for they are valued at rather more than three times the rate of the ermines of the province of Yakutsk. But, farther, the actual advantage which is derived by Russia from the fur-trade of Siberia, may be fairly estimated at a higher standard than that of mere roubles, on the one special ground, that the branch of commerce in question must have formed the main inducement for the Chinese to open an inland traffic with their neighbours. Even in 1837, the native furs alone were nearly equal in value to five-sixths of all the other native productions that were bartered at Kiachta. The farther back we might go, this proportion would indubitably be found to increase, on account of the comparative paucity and imperfection of native manufactures; till at last, by the time that we should reach the date of the treaty of Nertshinsk, skins would come to be almost the only equivalent that the Russians could offer, or the Chinese covet. So far back, too, as the year 1689, the influence of the fur-trade of Siberia, as an instrument of negotiation, must have been enhanced by the fact, that down to that time there still continued to be no other considerable fur-trade in the world.

The second most obvious advantage, and perhaps also the second in point of antiquity, is the international traffic which has been so frequently mentioned in the preceding paragraph. The Chinese trade, independently of its direct benefits to individual merchants and individual manufacturers, gives to Russia a position and an influence in the commercial world, which, without her

appendage of Siberia, she could never have acquired. But it is by its aid in peopling and civilizing Siberia, that the Chinese trade has been mainly serviceable to Russia. Of the 3,320,000 roubles expended, as already mentioned, on the transport to and from Kiachta, Siberians must have earned the larger share, perhaps as much as two millions of roubles, an enormous sum in a country where living is so cheap. But this is not all, for every considerable place on the route sends its contribution of manufactures to Maimatschin. I subjoin the table in full, as an equally authentic and interesting evidence of the fact:—

RUSSIA LEATHER.

<i>Places.</i>	<i>Pieces.</i>	<i>Roubles.</i>
. . . .	3,019	23,469
Irkutsk	6,376	52,626
Krasnoyarsk	1,107	8,856
Kainsk	3,428	34,210
Nertshinsk	200	1,760
Tara	2,015	18,950
Tomsk	22,195	239,384
Tiumen	19,373	213,257
Tobolsk	670	8,040
Kiachta	3,520	33,610
Total	61,903	634,162

The third advantage which Russia derives from Siberia is the trade in ivory. Though, in mere amount, this branch of commerce is of comparatively little value, yet it is well worthy of honourable mention, as having in a high degree promoted the progress of geographical discovery. It was in the eager pursuit of the bones of the mammoth, that most of the northern islands were visited and explored—islands which, when taken in connexion

with their mysterious treasures, invest the Asiatic coast of the Arctic Ocean with an interest unknown to the corresponding shores of America. Moreover, as more skill and judgment, and perhaps also ampler means, are required for disinterring or selecting tusks than for hunting or purchasing skins, a superior class of men have generally devoted themselves to the former occupation; and perhaps the most interesting feature in Baron Wrangell's interesting book consists of the occasional glimpses of the proceedings and disposition of a collector of ivory of the name of Bereshnoi—the same, by the by, who read the Easter service for the party on the solid ocean, with a block of ice as an altar.

In this enumeration of the advantages which Siberia confers on Russia, its mines and washeries may perhaps be considered as throwing all other merely economical advantages into the shade. Setting aside the temporary distraction and embarrassment which a new and brilliant speculation must occasion to more steady pursuits, these establishments, as a whole, must be allowed to produce a vast demand for labour, and to yield a profitable return for capital. But they are, in my opinion, destined to be of political importance, as well as of commercial value. The great instruments of national aggrandizement in modern times—I mean, of course, only the material instruments—are coal, and iron, and the precious metals. Coal is limited almost exclusively to the broad territories of the English race; iron is found chiefly in Sweden, and England, and Russia, respectively the stem and the branches of the Norman tree that already overshadows the whole of either continent at its greatest width; and the precious metals are more abun-

dant in Siberia than in all the rest of the old world, the most precious of them being perhaps more plentiful than in all the rest of both hemispheres taken together. Thus have England and Russia—for Sweden is merely a dependency of the latter—been prepared by nature for the grand task, which Providence has assigned them, of being the principal agents in controlling and regulating the destinies of the human family. It is in her own proper department, too, that each of those two powers has been prepared. With the iron in common between them, Russia, to whom coal would have been comparatively useless, has gold as the sinews of military enterprise; while England, to whose commercial spirit every country is a mine of gold, has coal as the most powerful element, both directly and indirectly, of naval superiority.

But Siberia, besides supplying Russia with the means of pressing on towards the south, has put her in position for doing so, bringing her into contact with all that portion of the old continent which lies to the eastward of her own proper influence. Thus does Russia, by land, hang, like an avalanche, over the whole of Asia, from the Grecian Archipelago to the Sea of Ochotsk, while England not only has every coast at her mercy, but permanently possesses every point, which can command either the highways or the byways of the ocean and all its inlets.

Lastly, Russia has been indebted to Siberia for the amelioration, both moral and political, of her own condition. Through her system of deportation, she has made good citizens of myriads, who, in other countries, would have been indirectly condemned, on their first

conviction, to a life of ignominy and shame ; and thus has she virtually achieved the miracle of reconciling the safety of the innocent, not merely with the impunity, but even with the prosperity, of the guilty. Again, through the absence of an hereditary aristocracy, the curse of predial servitude may be said to be unknown in Siberia ; and thus has grown up a numerous population of crown peasants, whose vassalage, as distinguished from the ordinary condition of a subject, is merely nominal. This entire exclusion of oligarchical influence must, of course, strengthen the crown, throughout the rest of the empire, against those whose property, in the minds and bodies of half the population, cannot fail, even under the most humane treatment, both to weaken the sovereign and to degrade the serf. Finally, as a mere incitement to a spirit of adventure, Siberia, ever since its discovery, must have had an important bearing on the formation and development of the Russian character.

On the 9th of September, we left Ekaterineburg before daylight, and, at the distance of about fifty versts from the town, crossed the height of land. We soon afterwards forded a small tributary of the Kama, being the first European stream that we had seen for nineteen months. In the neighbourhood of this brook were some iron works of the Countess Strogonoff, a descendant of the Strogonoffs of Yermac's days ; and as this was a portion of the princely fief that had nourished and equipped the conquerors of Siberia, we felt that we were treading classic ground. The ascent and descent of the mountains were so gentle, that we were hardly conscious of climbing a ridge that divided two continents.

The country, though tolerably populous, was yet poor and sterile. At the station at which we supped, the postmaster churlishly refused to render us any assistance. On looking, however, at our *podoroshnoya*, and seeing our titles and so forth, he suddenly lowered his tone, while, on the contrary, we raised ours; and, after frightening the fellow thoroughly, we accepted the somewhat incongruous apologies of himself and his wife, the lady ascribing her husband's sulks to his being disturbed at supper, and the gentleman throwing all the blame on his cattle, that had put him out of temper by getting the murrain among them.

Next day, we met many travellers of various grades and stations. We passed several bands of convicts; then there were large parties of labourers voluntarily trudging along to seek employment in the mines; and last, though not least, came a relative of the great Diamond Demidoff, driving away in state, with five wheelers and two leaders.

In the forenoon we reached Kungur, a thriving place dependent on the mines, with a population of six or eight thousand souls. Here I saw two novelties, which were calculated to produce, on the instant, very different impressions. Some apples in the market-place reminded me that I was drawing near home, while the first church that I had seen with the domes and pinnarets of the national style of architecture appeared to carry me back from Europe into Asia.

In many respects, in fact, the greater part of Russia is rather Asiatic than European. On this ground Napoleon said, that, if you scratch a Russian, you will catch a Tartar beneath—an aphorism which, when he

himself began to meddle with the customer in question, he found to be as true as it was pithy. But the Asiatic character is to be referred to causes wholly independent of an Asiatic origin. It was mainly produced by the political superiority of the eastern khans; it was partly the result of the religious influence of the Greek empire; and it doubtless, in some measure, was created, as it has continued to be cherished, by the Asiatic destination of the Volga, which drains the whole centre of the country nearly as far to the westward as St. Petersburg, and fully as far to the northward as the very head of Lake Ladoga, forcing, as it were, into the heart of Europe a foreign wedge of sixteen degrees of latitude in breadth, and twenty-eight degrees of longitude in depth. In addition, of course, to all these causes is the fact, almost too obvious to be noticed, that a considerable proportion of the population is confessedly Asiatic—a fact which, however, is tolerably conclusive in favour of the foregoing views, inasmuch as all the really oriental races we easily and constantly distinguished from the Russians themselves.

About eleven at night we reached Perm, remaining only an hour to change horses. Up to this city the Kama is navigable for the ordinary barges of the Volga, while flat-bottomed boats may ascend much farther both on the river itself and on its tributary streams—the Tchiusova in particular, ennobled as Yermac's route, being practicable till within sixty versts of Ekaterineburg. In so advantageous a position, Perm carries on an extensive trade of its own, besides being a place for the transhipment of all the transport between the opposite sides of the Uralian Mountains. The country is

thickly settled, villages lining the road at every four or five versts ; and the scenery presents a beautiful alternation of hills and valleys, the former apparently as closely cultivated as the latter. Soon after our visit, the fine old city of Perm was almost entirely burnt down.

During our next day's journey, the country on either side, as far as the eye could reach, was studded with villages, and farms, and churches ; these lands, formerly one extensive forest of pine, were now all brought under cultivation. We were still on the broad inheritance of the Countess Strogonoff, one of the richest subjects of the empire ; and, as the citizen of a state indebted for its supremacy to commerce, I could not but feel proud on reflecting that this noble lady owed alike her station and her wealth to the enterprising spirit of the old salt-maker of Solvytshegodskaya. On either side of the road there ran a double row of birches, intended in summer to shelter travellers from the sun ; but already, on the 23rd of our English September, every branch had been stripped of its leaves by the winds and frosts of autumn. The face of the landscape was hilly, and the soil, like that of Devonshire, red ; and vast quantities of flax, tallow, and bristles, were said to be exported to St. Petersburg.

At Sosnovich, where we lunched, one of the party left behind him a parcel containing some papers and medicines. Meeting two gentlemen at the next station, we entreated their good offices in the matter with very faint hopes of the recovery of the property : and, as a proof of the courtesy of the two gentlemen in question and of the honesty of the good folks of Sosnovich, the

missing articles reached London only a few days later than ourselves.

Soon after leaving Sosnovich, we entered the province of Viatka, taking its name from a tributary of the Kama. This district was said to be celebrated—and, in our experience, deservedly so—for bad roads, bad horses, and bad drivers; and as one of the few instances of dishonesty that we encountered in the whole empire, Viatka had also the credit of stealing a sheepskin coat from our carriage.

We soon found, however, that we had still more to learn about this province, for, early next morning, we met two merchants on their way to Perm, that had just been attacked by armed footpads, who were said to be infesting the road in considerable numbers. The ruffians had attempted to break or stop the wheels of the carriage by throwing a piece of wood between the spokes; but fortunately the log itself got smashed, without damaging the vehicle in any way. Being in constant dread of a similar visit, we travelled very rapidly; and at Mookikikea, where we supped, we had the good luck to find a civil old fellow of a postmaster, who had, many years before, picked up a little English at Portsmouth on board of a Russian ship-of-war. He told us that the country through which we were passing was principally occupied by crown peasants, most of them being of the aboriginal tribe of the Chiramises.

Next morning, we overtook an aide-de-camp of Prince Gortschakoff, Governor-General of Western Siberia, who joined us for the benefit of mutual protection. We met a great number of merchants returning from the fair of Nishney Novgorod, and also some parties of the Borlacki

nation, migrating from their native Bolgar, on the banks of the Volga, to Siberia. Tartar villages lined the road, in which, Sunday as it was, the more petty dealers, who were on their way from the grand emporium of the country, had erected stalls; and, in fact, at the town of Arsk, a regular market had been got up in this way. After crossing the Viatka, and passing through Malmish, we entered the province of Kazan, and about sunset arrived at the city of the same name.

Under any circumstances, one could not approach this ancient metropolis without deeply feeling the instability of all earthly grandeur. In the palmy days of the golden horde—a branch of that fearless race which, under Attila, and Zinghies, and Tamerlane, had thrice achieved the conquest of the world—the envoys of Kazan used to be received by the vassal dukes of Moscow with the homage due from subjects to their sovereign; and now this former seat of an illustrious dynasty was merely the capital of one of the fifty-two provinces of a Muscovite empire, which, including its dependencies in the new world, stretched upwards of a hundred degrees to the eastward of the utmost bounds of Tartar supremacy. But, at the present moment, such a train of thought was more likely than ever to occupy the mind of a visitor; for there, where Kazan had stood, we saw nothing but the dense smoke of smouldering ruins. This beautiful city, at once an object of pride to the victors, and of veneration to the vanquished, had fallen a prey to fire, two thousand buildings having been destroyed with the loss of at least two hundred lives.

This lamentable conflagration had been imputed to a

Pole, the head of the police, who, as soon as he found himself suspected of being the incendiary, had added probability to the surmise by committing suicide. It had begun in July, and had continued ever since, leaping, day after day, and night after night, from street to street, and from square to square. People, on retiring to rest, were never sure that they would not be dislodged before the morning; and the unfortunate sufferers, as they were successively driven from their perishing homes, had been chased by the flames from one refuge after another, till at last they planted themselves, either in the open air or under the shelter of temporary hovels, beyond the reach of the devouring element. The loss of property had been enormous; but that had been entirely thrown into the shade by the loss of life. The man who had sacrificed half of his substance considered himself fortunate, inasmuch as his neighbour had seen his all disappear before his eyes; and he again thought himself happy, because a third had to bewail the untimely fate of those who were nearest and dearest to his heart.

The progress of the fire had been remarkably capricious. One house would be destroyed, while the adjacent buildings would escape; and, in one street in particular, the church alone had survived the general wreck. The evil was aggravated by the prevalence of winds, which the heat alone was sufficient to raise; and, as if to render any attempts at prevention utterly desperate, the wooden pavement was consumed at the same pace as the edifices that lined it.

We got into one of the few decent houses that were

still standing in Kazan, where, however, no beds were to be had; but we were gratified instead by the receipt of letters from England and St. Petersburg.

Next morning, I was visited by the agent of the Russian American Company, who, like his brother of Tiumen, had been burned out. He was accompanied by Captain Zarimbo, a very agreeable and straightforward man, who was now on his way to Sitka, to fill the office of Lieutenant-Governor. We spent the forenoon in driving about the ruins, which forcibly reminded one of the vivid descriptions in the "Last Days of Pompeii;" rows of gutted houses, as cold and dead as if they had been unchanged for a century, being interwoven with streets, in which the oozing vapour still spoke of the freshness of the calamity. Even in this desolation, the elasticity and versatility of the spirit of commerce showed themselves, for the goods that had been expelled from the shops had taken possession of the vaults of the churches, in which were displayed shawls, jewellery, watches, &c.; every thing, in short, that embodied considerable value in little compass.

In mere rank, Kazan stood next to Moscow; and it was particularly famous as a seat of learning, possessing the finest oriental library in the empire. But now nothing remained to it but the blackened ruins of its former glory. The population was said to be, or to have been, about sixty thousand. The site of the town occupies some hills overlooking a plain, which separates them from the Volga. This plain is celebrated as the scene of one of the victories gained by the Muscovites over the Tartars; and it contains a large building

erected by the conquerors at once as a monument of their triumph and as a tomb for their slain comrades.

At ten in the evening, we crossed the Volga, here about a verst in breadth, glad to escape from the heated atmosphere of Kazan, more particularly as a heavy gale, which blew during the whole day, had almost blinded and suffocated us with dust and ashes. This storm, by the by, would have detained us all the time in Kazan, even if that city had nothing to interest us, by rendering the passage of the river impracticable. For a little distance, the road was so sandy, that we were obliged to walk in order to relieve the horses. Our route lay along the course of the Volga, affording us occasional glimpses of the river, with the cumbrous craft floating on its smooth waters. The barges that navigate the Volga have but one mast, some of them carrying as much as twelve hundred tons. Coming down the stream, they are laden with an infinite variety of supplies for Siberia, China, and the north-west coast; while their upward cargoes consist partly of goods from Kiachta, but chiefly of native productions, such as hides, tallow, wool, flax, furs, bristles, and iron, and other metals. The landscape presented to the eye a sea of corn-fields; for never had I seen such an expanse of cultivated ground as on this bank of the Volga. The harvest, which was scarcely finished, appeared to have been abundant; the barn-yards were filled with stacks, while the stubble was everywhere covered with busy gleaners, in the shape of poultry, sheep, cattle, and pigs.

The road occasionally passed through magnificent forests of oak, closely preserved for the use of the na-

tion. In these forests were some beautiful specimens, one tree in particular, of eighty or a hundred feet in height, being as straight as an arrow, and as clear of branches as a pine. No traveller could fail to admire this proud oak, even if it had not been lately fenced, as a proof of the Emperor's admiration, by his majesty's command. His majesty, by the by, was soon expected again to visit the neighbourhood for the purpose of personally putting an end to some disorders that reigned among the peasants. Most of these poor people were said to be crown serfs; and, as some change, whether for the better or for the worse they did not know, was contemplated in their condition, they had got up something like an insurrection, in which two hundred of them were said to have lost their lives.

The travelling was here worse by many degrees than in Siberia. The horses were bad, the roads heavy, and the delays apparently just what the postmasters chose to make them. We reckoned eight versts an hour as more than average work, while a loss of three or four hours at a station was an ordinary occurrence. At one place horses were not at hand; at another they had only come off a journey; at a third, they were reserved for some special purpose. But such excuses, and many others of the same tendency, we soon discovered to be part of the ways and means of the dilatory functionaries, for a few roubles, whenever I yielded to the imposition, never failed to accelerate movements. At one of our stations of to-day, an officer of police entered, saying that horses were to be reserved for a senator, who was coming this way from the westward—an embargo which caused us considerable annoyance, till, on the second

day thereafter, we met this official monopolist of cattle. In this case, however, we had not much reason to complain; for, in Siberia, where we were generally the great men of our time, we had very possibly put humbler individuals to similar inconvenience. At another station, we had to give way, of course, to the preferable claims of the mail; and, at a third, we were obliged to yield, notwithstanding our authoritative *podoroshnoya*, to a *podoroshnoya* professing to travel on urgent public business. I began to wonder how the ordinary *podoroshnoyas* got on at all; to them time would be considered of no value at the stations.

At one in the morning of the 17th of September, corresponding with our Michaelmas-day, we reached Nishney Novgorod, famous for the most extensive and important fair in the world. Here two or three hundred thousand people, from all parts of the old continent, are said to congregate, bringing with them the peculiar wares of their respective countries. Here may be seen Bokharians, Greeks, Chinese, Spaniards, Persians, Italians, Tartars, Jews, Germans, English, French, &c. The trade is as various as the crowd is motley, consisting of the teas and silks of China, the furs of America and Siberia, the hardware of England, the shawls of Persia, the metallic treasures of the Uralian Mountains, leather, hides, tallow, bristles, cottons, tobacco, horses, cattle—an endless catalogue, in short, of all that is requisite to supply the natural and artificial wants of mankind. But business does not altogether engross the attention of the assembled nations, amusements of all kinds being provided to fill up the odds and ends of time. Players, dancers, jugglers, and the whole race of showmen and

showwomen reap a golden harvest, while thousands, or, according to some estimates, tens of thousands, of young ladies, whose faces are their fortunes, come, in due proportion of numbers, from most of the same regions as the dealers themselves, in the charitable hope of providing every man with a partner of congenial taste and language.

This great meeting of the east and the west used to be held at Makarieff, a place a little farther down the Volga—a river which, however often the immediate locality of the fair may be changed, clearly enjoys a perpetual monopoly of nature's granting, of the inland trade between Asia and Europe. Nor will Nishney Novgorod, in fact, be lightly abandoned in favour of any other site, considering that the requisite buildings—the bazaar, as it were, of two continents—have been erected at a cost of many millions of roubles. The business lasts from the beginning of August to the middle of September; and the amount of the transactions is estimated at nine or ten millions sterling.

At the first station beyond Nishney Novgorod, in consequence of the senator's monopoly, we employed a soldier to obtain horses from the peasants for us. When paid for his trouble, he begged for a little more, in consideration of his having beaten the people; and on receiving such an addition as we thought the alleged service worth, he still stuck to us for a few supplementary kopecks, which, for the sake of peace, we gave him, on the plea, to borrow his own broken English, that he "beaten them well." At this station, we discovered that even the poorest podoroshnoya was better than no podoroshnoya at all. A dark-eyed, high-

nosed, long-haired little man, was here detained, with his wife, a swarthy but comely woman, and two servants, because, forsooth, the postmaster at the last station had given their indispensable *podoroshnoya* to a person going in the opposite direction, handing them, at the same time, the equally indispensable *podoroshnoya* of the person in question. As the other counterfeit would be stopped as well as himself, our excitable friend had sent back, in order to effect a second exchange of documents, hoping that his fellow-sufferer would evince as prompt a regard for the liberty of the subject. This prisoner at large, and his rib, we quickly discovered to be philanthropists, who had condescended to kill other people's time at the fair; and their virtue had been its own reward, for they had realized seventy-five thousand roubles, by having danced for six or seven weeks.

From Nishney Novgorod to Vladimir, even after we had got rid of our patrician forestaller, we encountered very tiresome delays at the posthouses. The country was closely settled and cultivated, with an almost unbroken chain of settlements, extending from the one place to the other, some of the settlements rising even to the dignity of small towns. In the neighbourhood of Nishney Novgorod, the soil is almost entirely owned by General Sheremetieff, a relative of the Emperor; and, for nearly two whole days, we continued to travel through his estates. He is said to possess a hundred thousand serfs, half of them being settled in this same province of Nishney Novgorod. These serfs appear to be as comfortable as any peasantry can be; to be better off, in fact, on many points than the free labourers of other countries, inasmuch as they have a claim on the assist-

ance, care, and protection of their owners in times of sickness or scarcity. Each head of a family holds a small farm, paying its rent partly in produce and partly in work. Under a very judicious and laudable regulation, one tenth part of all the crops is deposited in a public granary, as a store laid up against days of famine.

The serfs are simple, frugal, and industrious. Though they are a strong and muscular race, yet neither males nor females can, in my opinion, boast much of their beauty. The women are generally red-faced, red-handed, red-heeled, strong-featured wenches, of substantial build, while the men, as is their prerogative, surpass them in all these masculine accomplishments—neither sex attempting to improve nature by any very scrupulous regard to cleanliness or neatness.

In all their houses, the principal apartment is a large kitchen, in which are one or two stoves of brick or of earth; on these the people either bake or stew their food, the former process being performed in a sort of fryingpan, and the latter in earthen jars. Near the stoves, the floor is boarded, so as to form a sleeping place for the family. On this warm snugery, and even on the very tops of the stoves, the inmates stow themselves away almost in a state of nudity, with nothing under them but a piece of felt; so that, on entering one of the cottages by night, I found two young women baking themselves above the fire in their very scanty shifts. The young men, however, are occasionally shelved against the wall for the sake of etiquette; but, in spite of this very proper arrangement, the heat of the room sometimes constrains the damsels to edge themselves unconsciously towards the sides of the apartments,

while the bumpkins instinctively seek a cooler atmosphere, by rolling from their benches on the floor. In such cases, all the consequences, whatever they may be, are, of course, considered as accidental.

The females, at least, whatever might be the taste of the males in the matter, appeared to be extremely sober. Some women spat out nalifky that we gave them, quaffing, however, the dregs of our teapot with great relish, and putting the leaves on the ever-ready stove to dry for another occasion. Even when not stinted by the rule and measure of the church, the ordinary diet of these peasants is coarse enough, while, on the frequent fasts, the staple fare is black bread with salt, and perhaps a cucumber, the whole washed down, as I have already mentioned, under the head of the Lena, with water at discretion, taken, like soup, with a spoon.

We constantly met parties of women on their return from harvest, singing their national airs, one of them giving out the stave, and the others joining in chorus. On one occasion, we saw about a dozen of the same sex, cutting up cabbages for sour krount, and lilting away to keep time with their choppers. Their melodies were almost all pleasing.

Early in the morning of the 19th of September, we entered Vladimir, once the capital of a detached principality, and perhaps also at one time the metropolis of the whole country. It was still said to be the residence of many wealthy owners of the neighbouring soil, possessing, on that account, tolerably good society. We were obliged to wait here for our Russian fellow-traveller, who was detained at the last station for want of horses,

for, when we were all ready to start, that gentleman's driver, having caught a blow from the same pipe-stem which had done Cossack's duty before, untackled his cattle, and left our disciplinarian in the lurch. Thus, the stimulus, which, as already stated, had raced horses to death to Siberia, procured them a holiday in Russia; and, inconvenient as any detention was, we were not sorry for the change.

While we remained at Vladimir, a courier arrived with an official order that we should everywhere be supplied with horses, as if travelling on public business. This document, which was dated as far back as the 8th of May, came too late to be of any service whatever, for I had already agreed with some peasants to convey us to Moscow at twice the regular rates.

The route to Moscow was an almost unbroken chain of populous villages, in which scenes of debauchery presented themselves on all hands, resting on the double pretext of the conclusion of harvest and of a holiday of the church. The exorbitant demands on the road were a pretty sure indication of the vicinity of the capital; and at one place we were charged fifteen roubles for milk and mutton-chops, cooking for ourselves and finding our own tea.

On the morning of our second day from Vladimir, we reached Moscow, in which, Sunday as it was, the shops were open and the markets full. We drove first, as in duty bound, to the London Hotel; but, finding it a bumper, we proceeded to the Dresden, situated in the most fashionable part of the city, in the same square, in fact, as the residence of the Governor. The weather was cold and boisterous; the women in the streets

looked chilly, with red noses, and the men looked rather worse.

Of a place so well known as this ancient metropolis, so hurried a traveller as myself could not presume to offer any account. In fact, what pen, with the amplest leisure and the highest talent, could adequately describe the novelties and beauties of the Holy City, with its gorgeous palaces and the thousand and one spires, domes, pinnarets, and cupolas of its churches? Who can give an idea of the ever varying diorama both of Europe and of Asia, that exhibits itself in the streets and squares of this unique capital? Here the natives of all countries jostle one another, each in his national costume—the flowing robes of the east, and the prim garments of the west; the graceful attire of the Tartars, and the clumsy coats and formal hats of the substantial burghers; the sombre garments of the jolly priests, and the bright shawls and elegant turbans of the ladies fair; Turks and Arabs, Jews and gipsies. But, however incompetent to say all that might be said, every traveller, as a duty sacred to the cause of humanity, should at least mention the Sheremetieff Hospital, supported entirely at the cost of the munificent nobleman of the name, not for the benefit of his own serfs, but for the general good.

Moscow stands on hilly ground, covering a vast area, inasmuch as all the public buildings and many private mansions have enclosures round them. I would that I could leave the reader to picture to himself elegant shrubberies and ornamental gardens; but how different would such an imagination be from the vulgar reality, amounting to a perfect eyesore, of rectangular beds of

cabbage in all its tribes, carrots, turnips, onions, and such like. In the palaces of Moscow the kitchens monopolize the grounds. Next to the Kremlin, among the divisions of the city, ranks the Kitai-Gorod, commonly rendered, according to the literal signification, into China Town. But, as the quarter in question of Moscow bore its present name long before Russia had any intercourse with the celestial empire, one might perhaps suggest a different version of the first half of the compound.

In primitive times, the Kitai-Gorod was distinguished from the rest of the city in this respect, that it was bounded by a wall, a feature which was peculiarly likely, particularly in the mouths of roving shepherds and hunters, to be embodied in the ordinary appellation of the enclosed space. Nor is independent proof altogether wanting of this interpretation of *Kitai*. *Kitaia*, the Russian term for China, as *Cathay* is our corresponding English one, was imported into Europe in the days of Zinghis Khan's immediate successors, the conquerors alike of Eastern Russia and of Northern China; and, as the great wall, which had been built to check the southern incursions of the Tartars, had long been in existence, it was more likely than anything else to give name to the country which it protected, among the savages whom it fettered. In a word, *Kitaia* was the walled country, and *Kitai-Gorod* the walled town, in the language of those who simultaneously gave law both to the one and to the other. Though the point is purely speculative, yet it is nevertheless interesting; and these suggestions may at least have the effect of drawing the attention of persons versed in the oriental tongues.

However interesting the present may be in this singular city, the past is perhaps still more so. In its derivative, Muscovy, Moscow was, for several centuries, identified with the whole of the territories of its dukes and its czars, the derivative in question having been applied, in a spirit of jealousy or of scorn, by the Poles, who, having torn away the original settlements of the Normans on the Borysthenes, arrogantly pretended that to themselves belonged everything worthy of the name of Russia. Even after the erection of St. Petersburg had, in one sense, degraded Moscow to the rank of a provincial city, and after the progress of conquest had rendered Muscovy merely the nucleus of a far more extensive dominion, this ancient seat of the czars and dukes still continued to be the true centre of Russian nationality. In this view, Napoleon doubtless felt that the capture of Moscow would deal a heavier blow than that of St. Petersburg. He did not, however, sufficiently consider how often history had taught the people to sustain with fortitude, or even to contemplate with pride, the direst reverses of the Holy City. If Moscow had been four times burned, she had been four times avenged; if she suffered from the Lithuanians towards the close of the fourteenth century, she saw Lithuania at her feet before the close of the eighteenth; if she suffered from the companions of Tamerlane, she saw Yermac, in less than two hundred years afterwards, inflict ample retribution on a descendant of Zinghis Khan; if, in 1571, she suffered from the Tartars of the Crimea, she saw the arms of Catherine the Second carried in triumph along the northern shore of the Black Sea; if, in 1611, she suffered from the Poles, she saw in Poland, at the

time of Napoleon's invasion, an integral part of Russia, excepting only that comparatively petty duchy which Napoleon himself was mocking with the name of independence. If any long-bearded seer, when the French standards were mingling in the distance with the flames of Moscow, had predicted the consequent prostration of France, he might have based his prophecy on the ground of uniform experience; but he could hardly have dared to hope that, within nineteen short months, Napoleon would be dethroned,—and Paris be saved from retaliation, by the mediation of his own august sovereign. In this last case, the calamity of the Holy City was not only the beginning, but also the cause, of that great revolution which so suddenly emancipated Europe; and the inhabitants, by their heroic sacrifice of homes and hearths, invested their ancient metropolis with a claim to the veneration and gratitude of every nation in the west. In a word, Moscow was thenceforward entitled to be considered as the Holy City not merely of Russia but of Christendom.

Moscow has extensive manufactories of cloths of various descriptions, monopolizing in this respect nearly the whole of the trade of Kiachta. In 1837, the house of Alexandroff alone, according to the official statement so often quoted, sent to the celestials its own fabrics to the enormous value of one million and six hundred thousand roubles. In imports too, as well as exports, this city is one grand emporium of eastern traffic. So far at least as furs are concerned, it must derive a lucrative business in this way. Taking a fancy to a cloak of black fur, I was anxious to purchase it for my wife; but the demand of seven thousand roubles, fully three hundred pounds sterling, for a useless piece of finery, instan-

taneously put to flight all thoughts of my better half's wardrobe. Sables were offered at two hundred and fifty or three hundred roubles, by no means equal to what I had purchased at Yakutsk for the fifth part of the money; and as the freight from the Lena would not amount to a rouble a skin, this exorbitant rate would alone be sufficient to show the comparatively trifling influence of even the heaviest cost of transport on the prices of expensive commodities.

On Monday evening we left Moscow, having now between us and St. Petersburg, the goal of our overland journey, only about seven hundred versts of a macadamized road. At nearly equal distances from the two capitals stands Vishney Volotchok, the place at which the upward cargoes on the Volga, which, however, is still far from its sources, are transferred to the canal that unites that noble stream with the tributaries of the Gulf of Finland. Considering the ultimate destination of most of this bulky transport throughout the whole length and breadth of European Russia, an English traveller can hardly avoid reflecting that every river and every canal is chiefly a highway to this country, that nearly every thing which he sees around him is homeward bound as well as himself; and, if he rises from personal feelings to political contemplations, he cannot fail to infer that Russia and England are peculiarly interested in each other's welfare and tranquillity.

A little to the east of the middle point between Vishney Volotchok and Novgorod is situated Valdai, taking its name from the hills which divide the waters of the Volga from those of the Neva. In the neighbourhood of this town is a small lake, containing an

island, on which stands a monastery, thus shut out by the waters from the pollutions of the world. Whether the inmates of this secluded establishment are wiser, or happier, or better, merely because they live in the centre of a pool, one may be permitted to doubt.

On the third morning after leaving Moscow, we breakfasted in Novgorod, one of the earliest seats of the Norman invaders of the country. This town presents numberless proofs of former greatness,—ruined churches, deserted mansions in the most magnificent style of ancient architecture, and also a bazaar, which, like the hose of the slippered pantaloons, is a world too big for its diminished contents. This great mart between the east and the west had become so powerful as not only to deter the Tartars from attacking it, but also virtually to renounce the supremacy of the Russians. It received its first blow, when subdued by the first czar in 1471, and its second, when almost destroyed by the desolating cruelties of his grandson in 1570. Still so influential was its position against mere force, that Novgorod would soon have regained, if not its power, at least its wealth, had not its own weapons been turned against itself. In 1584, the erection of Archangel inflicted the third blow,—a blow which, ever since the opening of the White Sea, had been impending for more than thirty years; and about a quarter of a century afterwards, the erection of St. Petersburg, by intercepting the trade which the more northerly port attempted only to divert, gave the finishing stroke to Novgorod the Great and all its glory.

Novgorod is now little more than a mere place of passage between the Volga and the Neva, standing as it does on the Volkhov, which empties Lake Ilmen into

Lake Ladoga, and also on the canal of the same name, which has been constructed to avoid certain difficulties in the navigation of one of the Volkhov's tributaries. How different the destinies of Moscow and Novgorod under the ungenial influences of a city, which was intended to absorb all that was valuable in both. Against the emporium of commerce St. Petersburg was completely successful, because she had Nature's facilities and man's interests in her favour; against a metropolis consecrated in the hearts of the people, alike by triumphs and by disasters, St. Petersburg was almost powerless, because she had to contend with the hereditary prejudices both of patriotism and of religion.

Beyond Novgorod we passed a great number of very neat cottages, with gardens, belonging to "military settlers:" a gentle name for a body of eighty or a hundred thousand men, ready to be called into active service at a week's notice.

About eight in the morning, on the 8th of our English October, we drove into St. Petersburg, thus terminating our travels through the Russian empire about five-and-twenty weeks after our arrival at Sitka from the Sandwich Islands. The distance from Ochotsk to St. Petersburg, including stoppages, had occupied ninety-one days, during which time we had traversed about seven thousand miles. From Irkutsk the journey had occupied forty-one days, the nights being passed as follows:—

In the carriage	36 nights.
At Tomsk, on a sofa	1
At Ekaterineburg, on the floor	2 „
At Kazan, on a sofa	1 „
At Moscow, in a bed	1 „
	<hr/>
	41 nights.

Mrs. Wilson's excellent house being full, we fixed our abode at Miss Dee's, where I at once took to my bed, in consequence of a most severe and obstinate cold; so that, to my great regret, I was unable to partake of the proffered hospitality of any of my friends. Of St. Petersburg, of course, I saw nothing; nor did I particularly regret this, inasmuch as I had seen the city before.

The uppermost thought, I believe, in the mind of every person who visits this magnificent creation, is admiration of the genius, energy, and perseverance of its founder. This admiration, moreover, is vastly enhanced by recollecting, that the site for the new capital of the monarchy was selected within the recently conquered dominions of a rival, who had hitherto defeated every enemy, Russian, or Saxon, or Dane, or Pole, in every field. If the Romans have commanded the applause of posterity by selling and buying, at full value, the very ground on which Hannibal, within sight of their walls, had pitched his camp after the battle of Cannæ, how much more is Peter the Great worthy of renown, for having confidently committed both the honour and the wealth of his empire to the territories of the irresistible hero of Narva! But, in the estimation of this the greatest of czars, the case was the same with Russia as with Moscow. She was to draw victory from defeat, and triumph from humiliation. She was to be taught by the Swedes to beat Sweden. The Normans of Russia were to shake off the rust which they had gathered through the admixture of inferior races, under the discipline of the unadulterated Normans of Scandinavia. In illustration of the often repeated view

to which I have just alluded, may be stated the admitted fact, that the three branches of the northern hive of modern times, the English, the Swedes, and the Russians, excel all other nations in the grand element of military efficiency, a patient and stable infantry.

After having so frequently referred to the providential mission of the Norman race, I ought, perhaps, to mention, that I altogether disclaim any and every idea of wanton aggression. The genius and benevolence of the present emperor will find congenial and profitable occupation in prosecuting his enlightened views for ameliorating the institutions of his country and the circumstances of his people, in consolidating what he already possesses, or may hereafter be constrained to acquire, rather than in coveting an extension of dominion merely for its own sake. Such, in fact, was the task delegated to the house of Romanoff, when elevated to the throne of Russia in 1613, as the task delegated, after the lapse of a century, to the House of Brunswick in England was the protecting of civil and religious liberty.

For fifteen years after the extinction of the line of Ruric in 1598, Muscovy was torn to pieces by the intestine dissensions of numberless pretenders, till, at last, by the free choice of the nobles, Michael Fedrovitz Romanoff received the sceptre of the czars, in order to prevent the monarchy from falling to pieces. As such a duty was incompatible with a state of foreign war, this illustrious man preferred the unity of his dominions to their extent, sacrificing, for the sake of peace, Ingria and Carelia to the Swedes and Smolenks, Tschernigou and Novgorod to the Poles; while, by devoting his

undisturbed attention to internal ameliorations, he laid deep and broad the foundations of that strength, which ultimately led to the recovery of far more than what he had surrendered. It was in this same peaceful path, though, happily, without similar sacrifices, that Peter the Great, and, in fact, almost every Russian sovereign from Michael to Nicholas, has really won his brightest laurels.

The absence of the Emperor, who had gone, as was supposed, to put an end to the disturbances already mentioned as existing in the government of Kazan, prevented my friend Baron Wrangell from introducing me, as he was most desirous of doing, to his Majesty. In my peculiar circumstances, I deeply regretted this disappointment. Even if I had never set foot on the patrimony of Nicholas, I could not fail to regard, in common with every man of knowledge or reflection, the autocrat of three continents, the master of the most extensive dominion of ancient or modern times, as an object, not merely of philanthropic interest, but of mysterious awe. But, after seeing more of this colossal empire than any other foreigner, living or dead, I was naturally anxious, as an appropriate termination of my wanderings, to enter, as it were, into communion with the spirit that animated it. Independently of these general considerations, the present czar's personal qualities, physical, and intellectual, and moral, must induce every man's judgment to acquiesce in the homage which his feelings are constrained to pay. Nicholas is universally allowed to present the noblest mould of form and feature, to be the ablest and most laborious sovereign of the age, and, what is higher praise than all

in an individual of his exalted station, to set before his people the brightest example of all the domestic virtues.

Of the conclusion of my wanderings, little remains to be said. After being confined for eight days to my room in St. Petersburg, I embarked on the steamer Nicolai for Lubec, halting for coal at Stitichaun, on the Island of Gothland, where we were received into the house of a merchant of the name of Enequest, whose daughter was decidedly the prettiest girl that I saw in the whole course of my travels. On the eighth day from St. Petersburg, I reached Hamburg, lying in ruins, like Kazan, from the effects of the recent conflagration.

In five days more I reached London, having—with the exception of my proposed trip to Kiachta—accomplished my journey round the world as originally contemplated, the whole being completed within the space of nineteen months and twenty-six days.

THE END.
